

Introduction to Cancer Immunotherapy

Charles G. Drake M.D. / Ph.D. Professor: Medical Oncology, Immunology and Urology Johns Hopkins Kimmel Cancer Center

Ultra-Complete Disclosure

<u>Consulting:</u>

Amplimmune, Bristol Myers Squibb, Compugen, Dendreon, NexImmune, ImmunExcite, Janssen, Lilly, Merck, Novartis, Pierre Fabre, Potenza, Roche / Genentech, Vesuvius

- <u>Patents</u>
 Amplimmune, BMS
- Several of the Agents Discussed are NOT FDA-approved for use in cancer treatment

Learning Objectives

- The immune system can (sometimes) eliminate cancer
 - Evidence from pathology studies
 - The immune editing hypothesis
- Using the Immune System to Treat Cancer (Immunotherapy)
 - Monoclonal Antibodies (Not covering today)
 - Cancer Vaccines
 - Adoptive Cellular Therapy (ACT)
 - Immune Checkpoint Blockade

Endogenous Anti-Tumor Immunity

Are There Immune Cells in Tumors ?

CD3 (all T Cells) CD3 Cytokeratin D Ε F CD4 CD8 104 104 0.025 10.8% 0.020-103 103 24.9% CD8 APC CD36 mRNA CD4 APC CD4 or CD8 0.015 102 102. 0.010-(By Flow) 10 0.005 10 102 103 104 10 102 103 104 0.000 Intratumoral No Intratumoral CD3 (fluorescein isothiocyanate) CD3 (fluorescein isothiocyanate) T Cells T Cells G P<0.001 0.5 0.4 CD4 or CD8 0.3-0.2 CD8 (By IHC) 0.1 0.0 -0.2 0.1 0.2 0.3 0.4 0.5 0.6 0.0 CD4

Zhang et al. N Engl J Med 2003;348:203-213

Do They Matter ?

Zhang et al. N Engl J Med 2003;348:203-213

The Immune Editing Hypothesis (3E's)

Cancer Vaccines

Cancer Vaccine Goal Dendritic Cells Traffic and Present Antigen To Specific CD4 and CD8 T Cells in the Draining Lymph node

A Viral-Based Vaccine For Prostate Cancer

Evidence for Activity

A "Dendritic Cell" Vaccine: Sipuleucel T

IMPACT Overall Survival: Primary Endpoint Intent-to-Treat Population

Adoptive Cellular Therapy (ACT)

Getting the Lymphocytes From The TUMOR itself

Seems to Work

Re-Engineering A Patient's T Cells

A "Chimeric" Antigen Receptor (CAR)

Courtesy of. Carl June, U Penn

Immune Checkpoints

Immune Checkpoint Molecules Attenuate a T Cell Response

T Cell Activation Requires TWO Signals

CTLA-4 Prevents Normal T Cell Activation

Anti-CTLA-4 Blocks the CTLA-4 Checkpoint and Restores T Cell Activation

A Second Trial of Anti-PD-1 – Higher / More Frequent Dosing - Results in Kidney Cancer Patients

- Generally tolerable: fatigue, rash, pruritus, diarrhea
 - 3 deaths: pneumonitis (non-RCC)
- Preliminary efficacy in heavily pre-treated patients:
 - 29% objective responses
 - Median PFS 7.3 months

Drake CG et al Journal of Clinical Oncology, 2013 ASCO Annual Meeting Abstracts. Vol 31, No 15_suppl (May 20 Supplement), 2013: 4514 ASCO 2013

Summary

- Cancer Vaccines:
 - Sipuleucel T = FDA approved
 - Intra-Tumoral Vaccination in Melanoma
- Chimeric Antigen Receptor Expressing T Cells (CAR-T)
 - Promising early results in hematological malignancies
 - Being commercialized by many companies
- Immune Checkpoint Blockade
 - Anti-CTLA-4 (Ipilimumab) is FDA-approved to treat melanoma
 - Anti-PD-1 antibodies FDA-approved to treat melanoma, NSCLC
 - NINE anti-PD-1 antibodies are in clinical trials
