Melanoma responds to T cell infiltration by expressing PD-L1 (adaptive immune resistance)

Patient Characteristics of the UCLA Study Cohort

Variable	Response	Progression	p-value*
UCLA Patients (N = 46)	N = 22§	N = 24	
Male (%)	17 (74%)	19 (79%)	>0.99
Median Age (range)	65 (45-90)	64 (36-86)	0.86†
Median WBC Count (range)	6.9 (3.9-21.3)	7.1 (4.0-24.8)	0.52
Median Pre-TX Tumour Burden in cm (range)‡	8.7 (1.1-32.2)	7.9 (1.1-19.4)	0.9†
Metastatic Status			
M0	3 (13%)	2 (8%)	0.13†
M1a	4 (17%)	2 (8%)	
M1b	7 (30%)	6 (25%)	
M1c	8 (35%)	14 (58%)	
Dosing Regimen			
10Q2W	9 (39%)	5 (21%)	0.2
10Q3W	8 (35%)	8 (33%)	
2Q3W	5 (22%)	11 (46%)	
BRAF Mutation			
Mutant (# not WT)	7 (30%)	9 (38%)	0.76
Previous Treatment			
chemotherapy	3 (13%)	5 (21%)	0.7
BRAF or MEK inhibitor	3 (13%)	5 (21%)	0.7
immunotherapy			
ipilimumab	8 (35%)	13 (54%)	0.25
other	7 (30%)	9 (38%)	0.76
Pre TX Biopsy Location‖			
Subcutaneous	14 (61%)	11 (46%)	0.02†
Liver	0	8 (33%)	
Lung	5 (22%)	1 (4%)

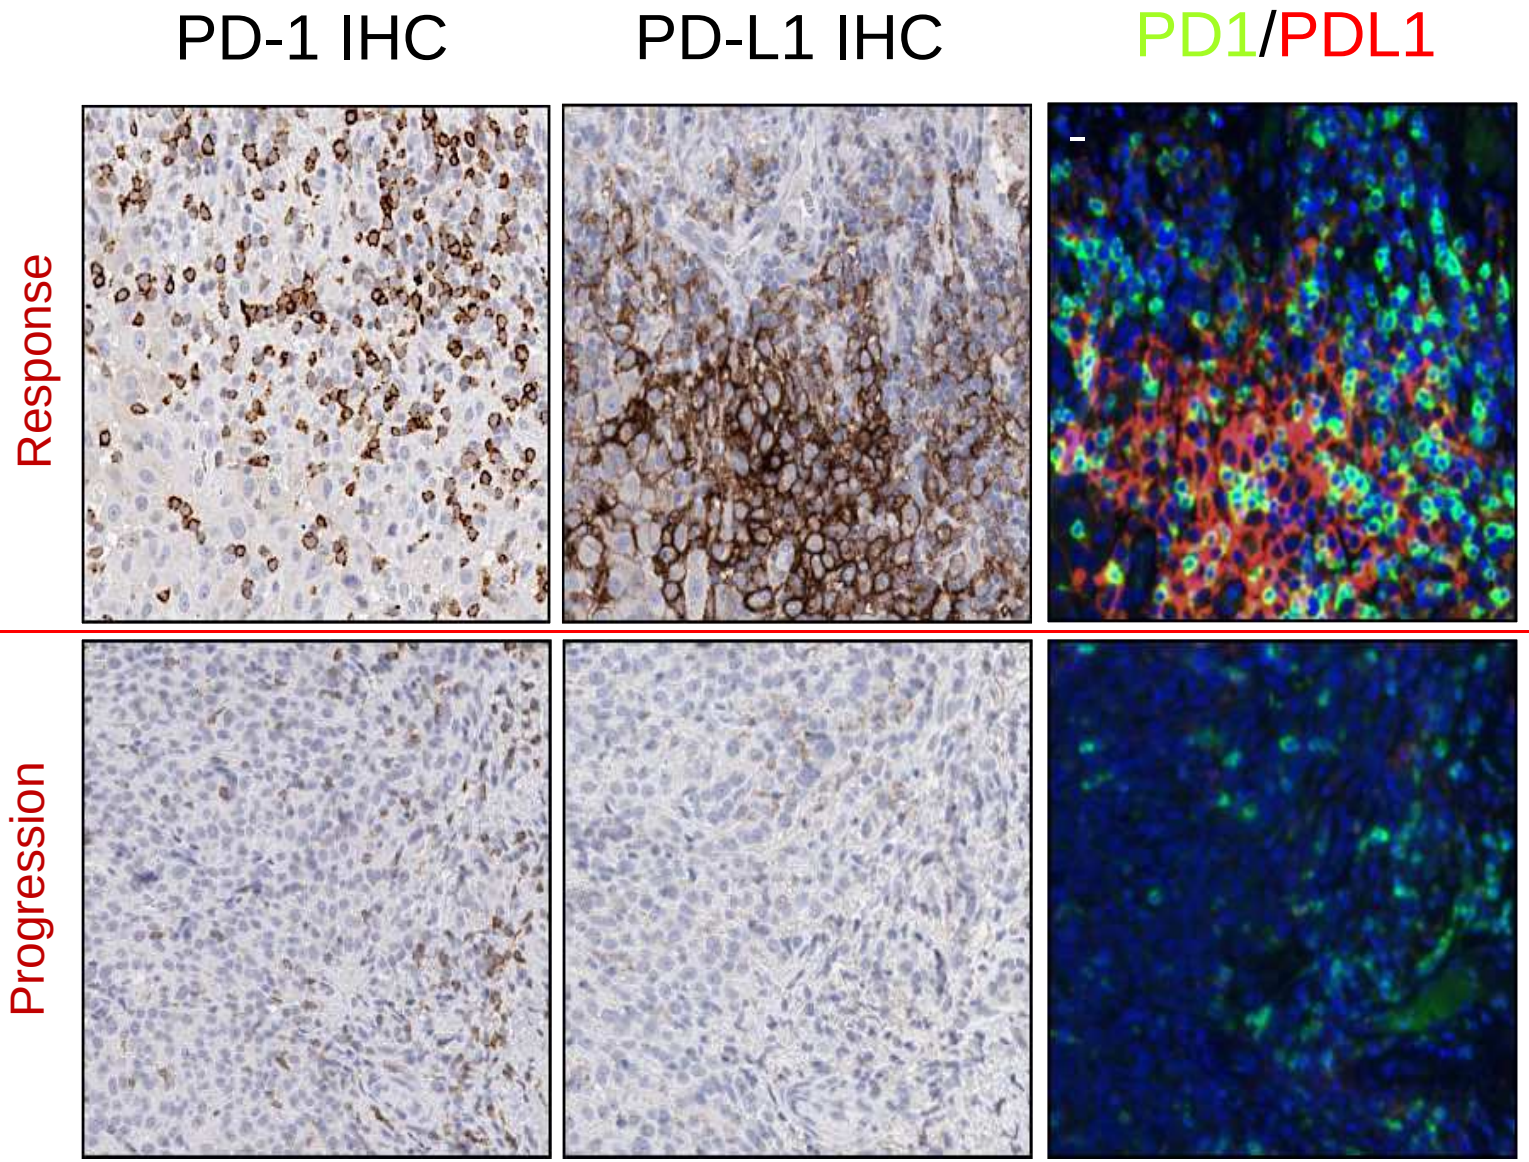
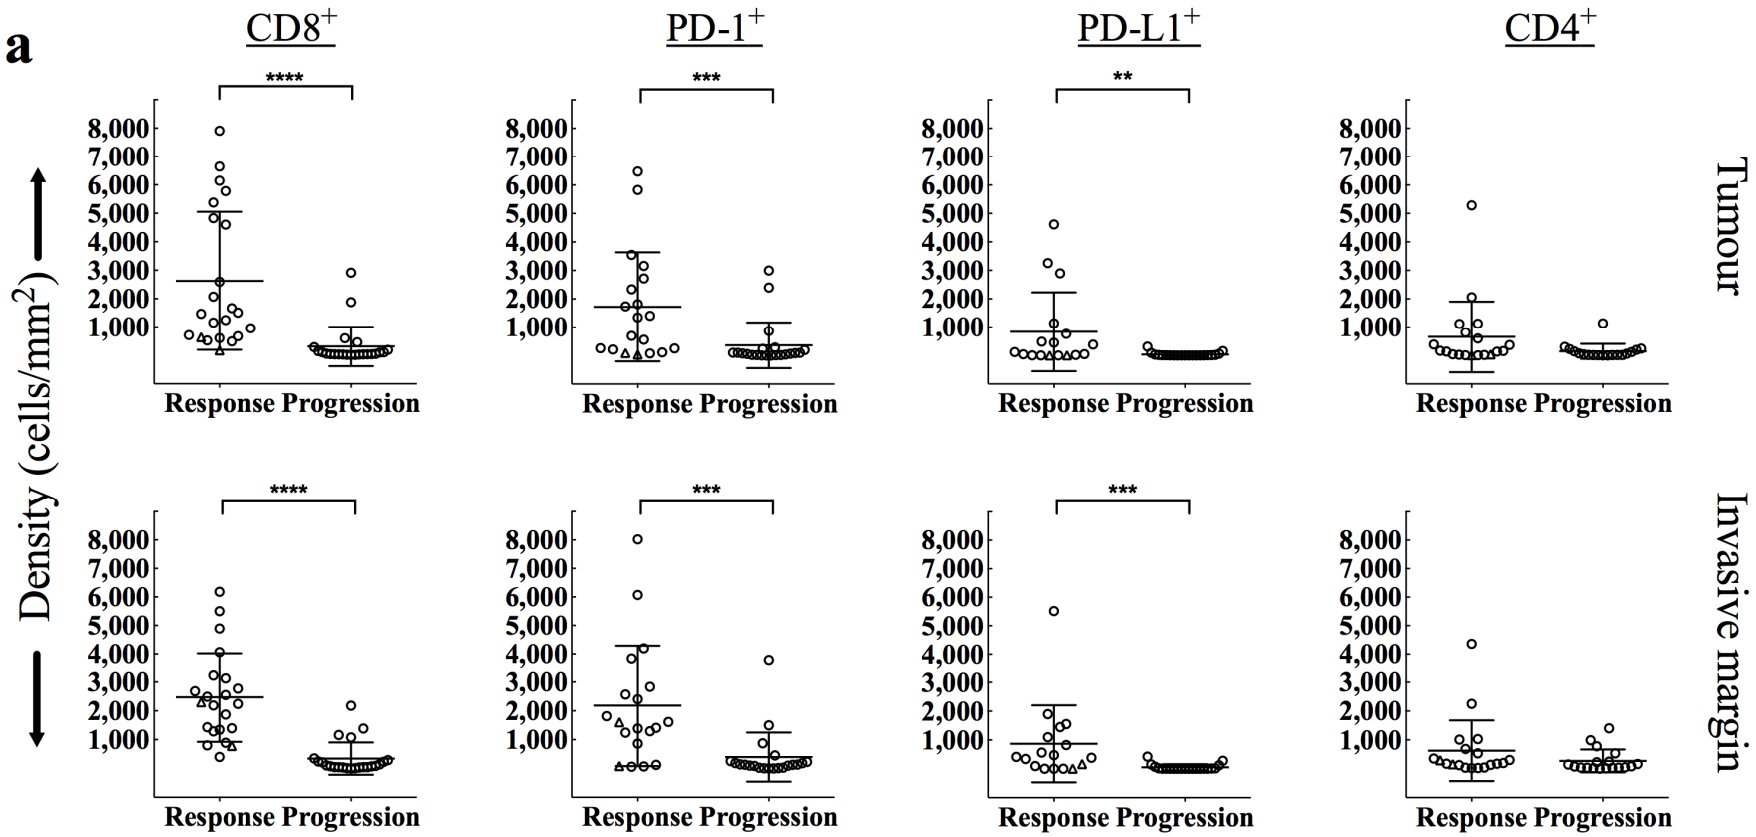
Immunophenotypic characterization of the T cell to tumor cell interaction (invasive margin)



Jennifer H. Yearley, Robert H. Pierce

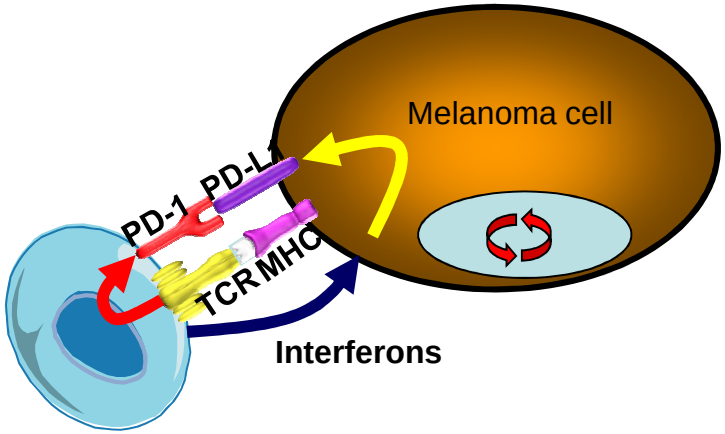
Patients with response to PD-1 blockade have higher initial intratumoral and in the invasive margin CD8, PD-1 and PD-L1

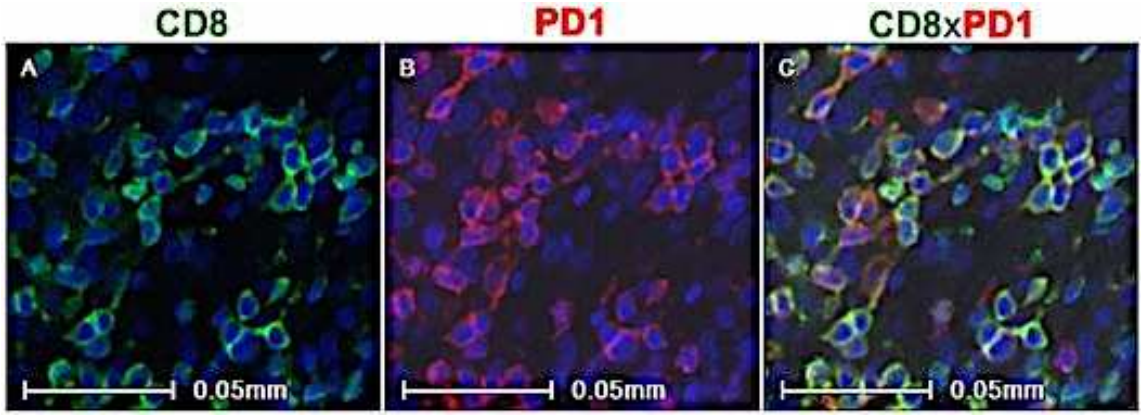


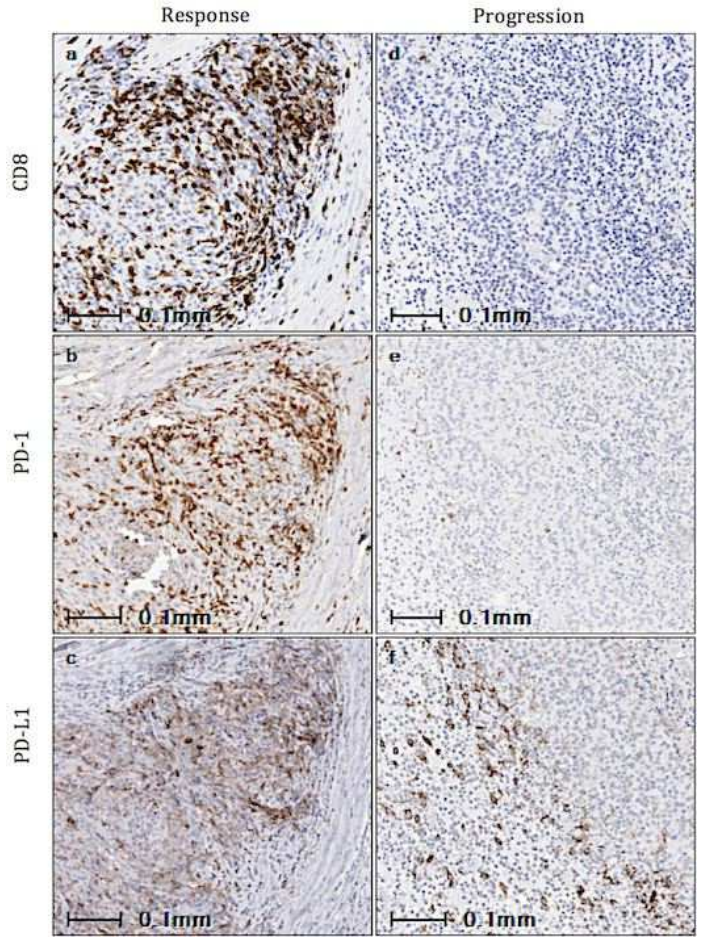
Baseline density and location of $CD8^+$, $PD\text{-}1^+$, $PD\text{-}L1^+$, and $CD4^+$ cells by IHC, according to treatment outcome

Paul C. Tumeh, Christina L. Harview, I. Peter Shintaku, Emma J. M. Taylor, Jennifer H. Yearley, Robert H. Pierce

PD-1 and PD-L1 expression in response to CD8 infiltration and adaptive immune resistance







Paul C. Tumeh, Christina L. Harview, I. Peter Shintaku, Emma J. M. Taylor, Jennifer H. Yearley, Robert H. Pierce

A Logistic Regression Model Analysis: Predicting Response

Variable	AUC (95% CI)*	P-value**
Tumour		
CD8+ Density	.91 (0.81, 1.00)	<0.001
PD-1+ Density	.80 (0.67, 0.94)	0.001
PD-L1+ Density	.71 (0.54, 0.88)	0.026
CD4+ Density	.66 (0.48, 0.84)	0.095
Invasive Margin		
CD8+ Density	.94 (0.88, 1.00)	<0.001
PD-1+ Density	.80 (0.66, 0.94)	0.001
PD-L1+ Density	.79 (0.64, 0.95)	0.002
CD4+ Density	.66 (0.48, 0.84)	0.095

*The area under the ROC curve (AUC) was used to measure response prediction performance for pre-treatment CD8+, PD-1+, PD-L1+, and CD4+ cell densities (cells/mm^2).

**P-values were computed on the basis of the Wilcoxon rank sum statistic.

Christine Mateus, Gorana Tomasic, Caroline Robert, Gustave Roussy

Conclusions

- PD-1 blockade induces responses by inhibiting adaptive immune resistance
- PD-1+ expressing CD8+ T cells co-localize with PD-L1 expressing tumor cells at the invasive margin in responding patients
- PD-L1 alone cannot be used as a biomarker for response to PD-1 blockade, as it requires having information about CD8 T cell infiltration
- Patients with a tumor response to PD-1 blockade have a higher frequency of clonal TCRs at baseline
- Blockade of PD-1 results in CD8 T cell proliferation inside tumors, expansion of TCR clones and increased effector functions (granzyme B)
- The presence of CD8s in the tumor margin can be used to predict likelihood of response to PD-1 blockade
