

# Immuno-Oncology Biomarkers: State of the Art

## *CITN Data Management and Specimen Sharing*

(May 17, 2018)

Martin A. “Mac” Cheever MD  
*Director: CITN*  
*Fred Hutch/ U of Washington*  
[mcheever@fredhutch.org](mailto:mcheever@fredhutch.org)

Steve Fling PhD  
*Director: CIML - CITN Central Immune Monitoring Lab*  
*Fred Hutch*  
[sfling@fredhutch.org](mailto:sfling@fredhutch.org)

# CITN Goal and Mandate

- Advance the field of immunotherapy and accelerate development of immunotherapy for cancer patients
- Quickly pair cutting edge clinical trials with informative correlative biomarker studies

## *Inform the next steps!*

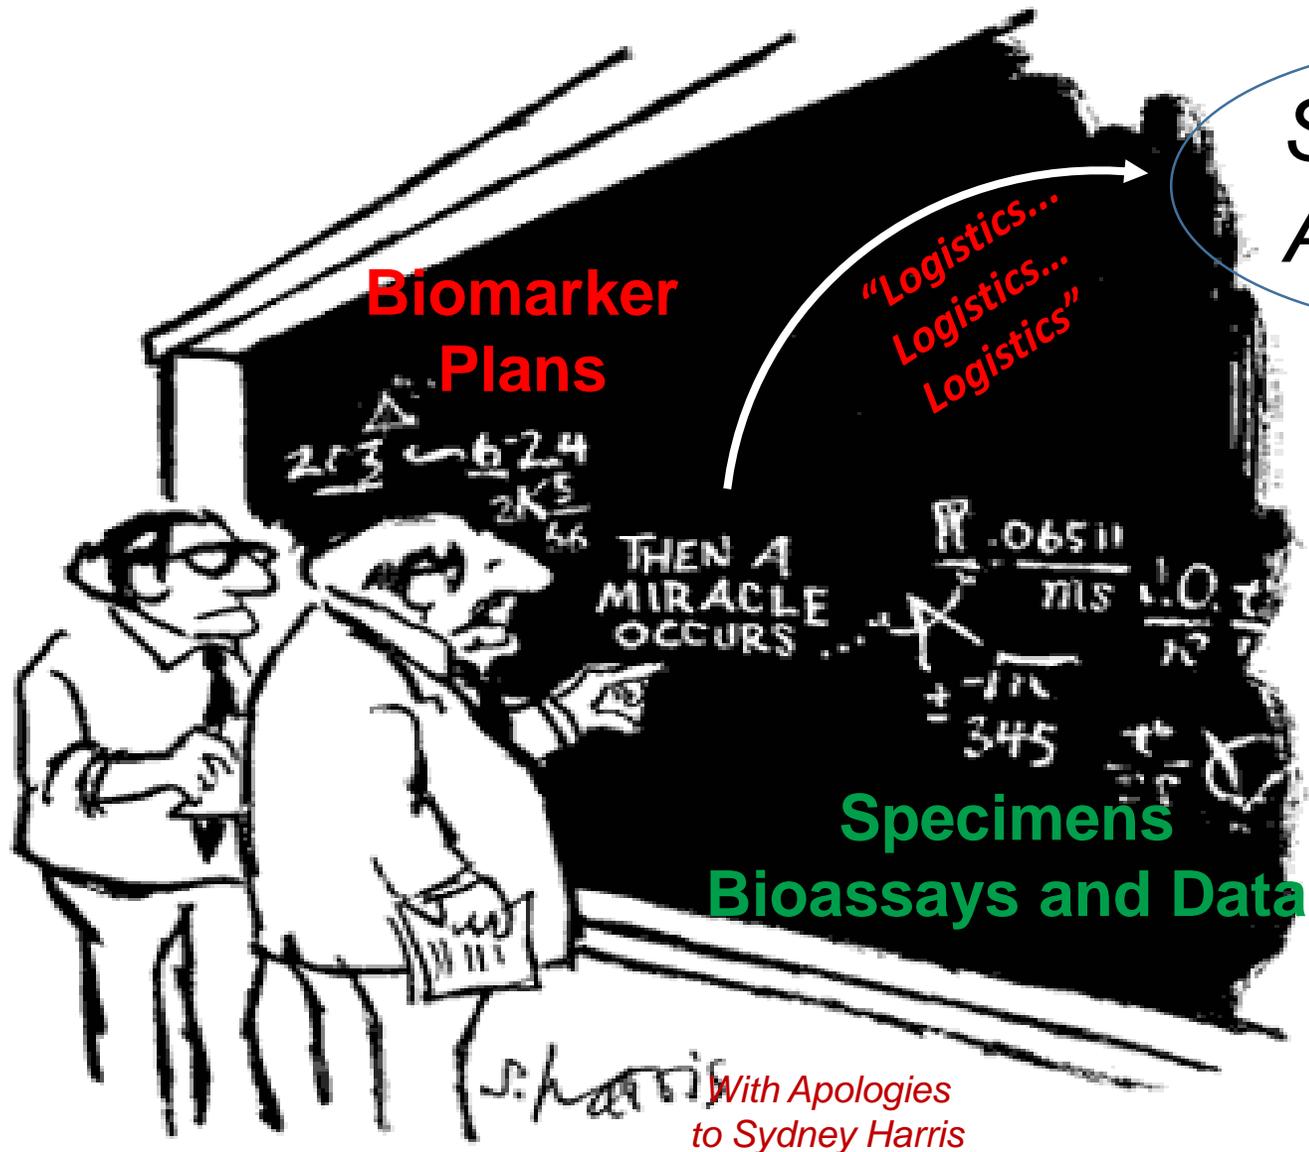

- Rapid progress and success required comprehensive, centralized operations for:
  - *Coordination of protocol biomarker sections with PIs and PMs*
  - *Quality Specimen collection, processing, biobanking, management (to match protocols and amendments)*
  - *Real-time immune monitoring assays*
  - *Close collaborations with expert laboratories for biomarker studies*
  - *Integrated Data Management*

# **Goals of Talk - CITN Data Management and Specimen Sharing**

- **Emphasis: Without quality specimens...there is no quality science/data!**
- **Complexity of Specimen Accession process (*esp for Multicenter trials*)**
  - *What does it REALLY take to for this piece of the flow puzzle?*
- **What 'systems' has the CITN Lab put in place to accomplish this?**
- **What are the results?**
- **What can be learned and applied?**

# Goals of Talk - CITN Data Management and Specimen Sharing

- Emphasis: *Without quality specimens...there is no quality science/data!*
- Complexity of Specimen Accession process (*esp for Multicenter trials*)
  - What does it **REALLY** take to for this piece of the flow puzzle?  
*“Logistics...Logistics...Logistics” Ignacio Wistuba*
- What ‘systems’ has the CITN Lab put in place to accomplish this?
- What are the results?
- What can be learned and applied? *“Nimbleness” Lisa Butterfield*

"I think you should be more explicit here in step two."

# Logistics are complex for multicenter trials...

## What does it take?

### Essential Components:

- **Integrated Systems**
- **Dedicated Staff vested in:**
  - Understanding the systems
  - The Samples! from acquisition, thru processing and data generation
- **Consistent, validated SOPs and Assays:**
  - To obtain, ship, process, handle and store multiple specimen types under optimal conditions that allow for real time and future assays

# Logistics are complex for multicenter trials... What does it take?

## Study Set up

- Identify appropriate assays, timing, and amt of specimen
- Accurately detail entire workflow and all procedures
  - ie trial specific lab methods
- Distribute data
- Train Site
- Assemble/ship study-specific specimen collection kits
- MTAs and Contracts
- Rapidly adjust to Amendments

## Sample Handling

- Define/Write SOPs
- Track/monitor all shipments and chain of custody
- Perform real time assays (ie Whole blood) or distribute fresh specimens for assays
- Contact sites for any delayed shipping and/or QA deviations
- Process and Store specimens under retrieval conditions
- Assess specimens for quality
- Rapidly adjust to Amendments

## Biomarker Studies

- Consult with trial PI, disease experts and assay experts
- Perform specified in house assays (ie Flow)
- **MTAs, Contracts, Consents**
- Retrieve and Ship specimens
- Manage/QA/QC Repository
- Monitor Samples *Out* vs Data *Back in*
- Monitor RETURNED Samples
- QA/Assemble/Organize Data
- Handle Ancillary Study Requests

**~70% of CIML effort/Cost goes toward this aspect!**

# Logistics are complex for multicenter trials... What does it take?

## Study Set up

- Identify appropriate assays, timing, and amt of specimen
- Accurately detail entire workflow and all procedures
  - *ie trial specific lab manuals*
- Distribute docs to all sites
- Train Site staff and PI's
- Assemble/Ship study-specific specimen collection kits
- MTAs and Contracts
- Rapidly adjust to Amendments

## Sample Handling

- Define/Write SOPs
- Track/monitor all shipments and record chain of custody
- Process specimens
- Conduct real time assays (ie Whole blood) or distribute fresh specimens for assays
- Contact sites for any delayed shipping and/or QA deviations
- Store specimens under retrieval conditions
- Assess specimens for quality
- Rapidly adjust to Amendments

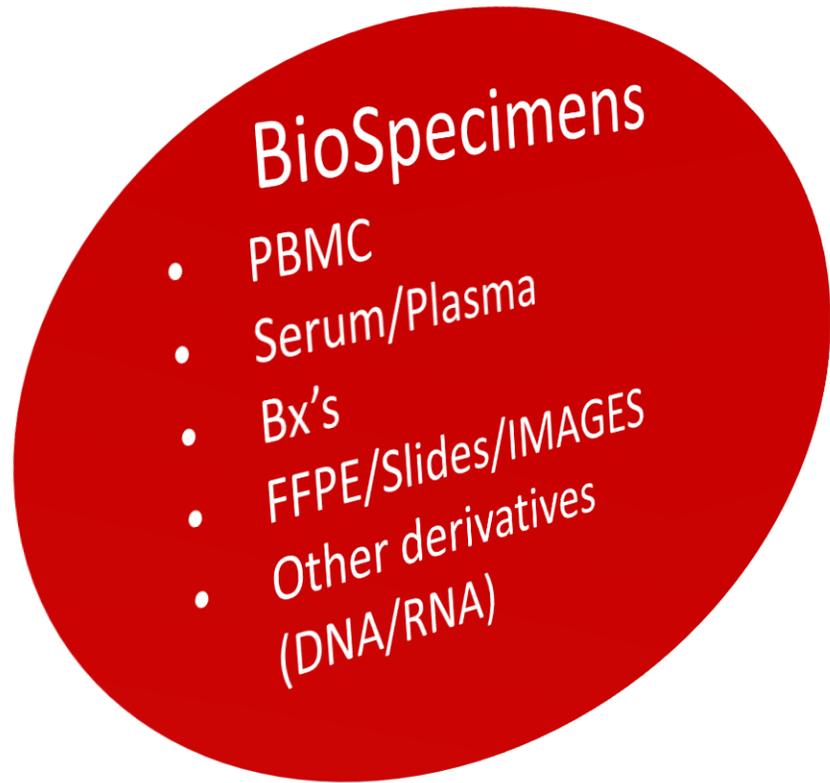

## Biomarker Studies

- Consult with trial PI, disease experts and assay experts
- Perform specified in house assays (ie Flow)
- **MTAs, Contracts, Consents**
- Retrieve and Ship specimens
- Manage/QA/QC Repository
- Monitor Samples *Out* vs Data *Back in*
- Monitor RETURNED Samples
- QA/Assemble/Organize Data
- Handle Ancillary Study Requests

# CITN Data Management and Specimen Sharing

Two Integrated Repositories:

## *Specimens - BSI-II*

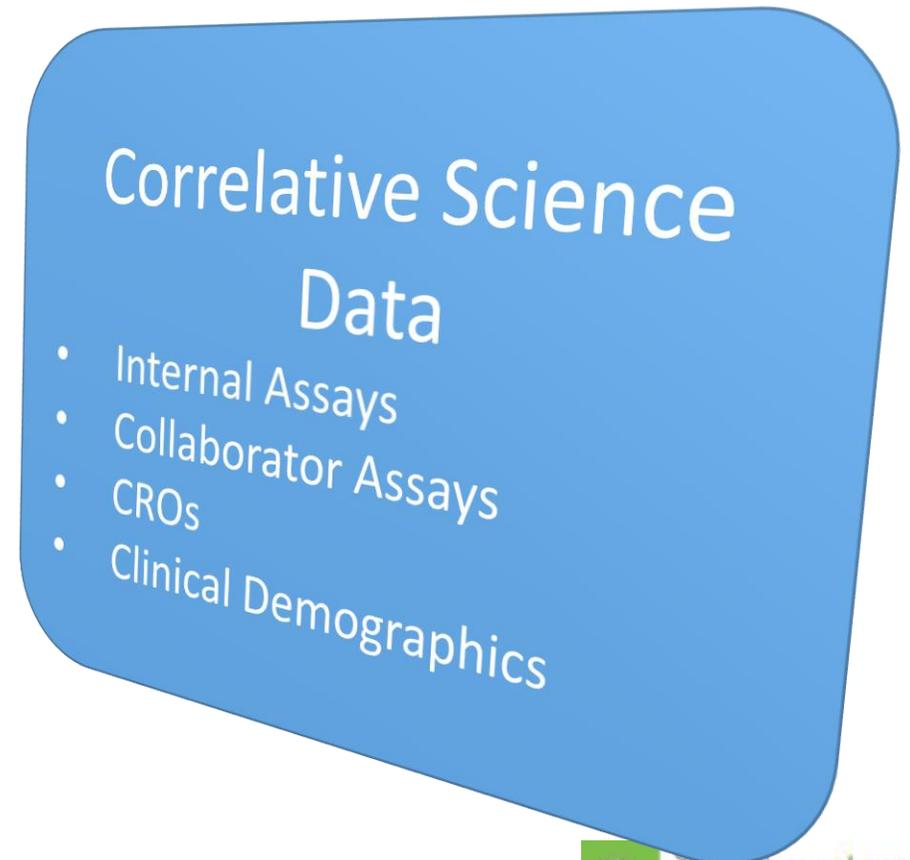

**Close  
Integration and  
Coordination!**

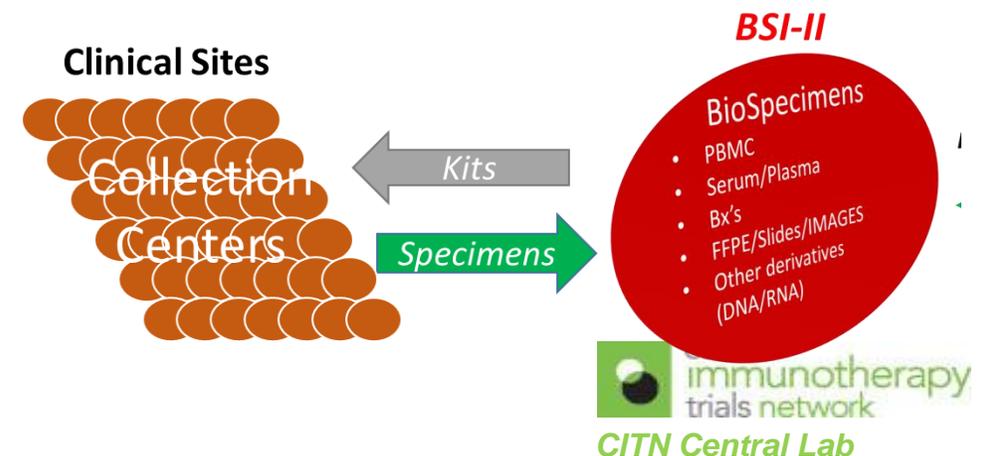

**Accelerated  
Results**

## *Data - LabKey*

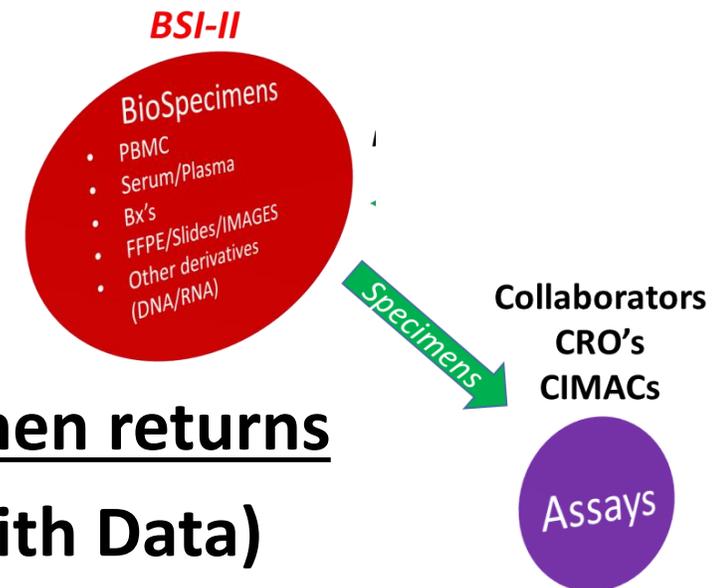

# BSI- Interface between Sites and the CITN Lab

- **Accurate Chain of Custody (real time)**
  - Web-based shipping - Not platform dependent
  - Manage large number of remote users (42 member sites / >10 trials)
  - Accurate Specimen and shipment tracking
  - Reconcile logged shipments with physical specimens → Annotate
- **Study Related Document Posting and Notifications to Sites**
- **Data QC and Auditing**
  - Reconcile logged shipments with physical specimens → Annotate
  - Reporting (standard, routine, robust)
- **Robust security (study level / user level)**
- **Regulatory Compliance**

# BSI – Specimen Management

- **Repository administration**
  - Barcodes and Standard Label Printing
  - Scalability
  - Centrally managed
  - Storage Management
- **QC: Specimen Processing, Issues; Specimen Characteristics**
- **Querying inventory**
- **Modules (Connect to samples)**
  - Subject Module (High Level demographics list)
  - Consent Module
- **Ship outs to collaborators, contractors ... and Specimen returns**
- **INTEGRATE with Labkey (Cross-reference Samples with Data)**

# CITN Data Management

### CIML LabKey Portal

#### Welcome to the CITN Immune Monitoring Lab (CIML) Portal

The purpose of this website is to:

- Assemble clinical trial data from multiple sources into robust data repositories
- Facilitate collaboration between the CIML Team and our collaborators
- Showcase scientific findings

 [About CIML LabKey Portal](#)

#### CITN Data Portals:

**CITN12-03:** A Phase 2 Study of recombinant glycosylated human interleukin-7 (CYT107) after completion of standard FDA approved therapy with sipuleucel-T (Provenge®) for patients with asymptomatic or minimally symptomatic metastatic castration-resistant prostate cancer (mCRPC)

**CITN-05:** A Pilot Study of the Immunological Effects of Neo-Adjuvant INCB024360 in Patients with Epithelial Ovarian, Fallopian Tube or Primary Peritoneal Carcinoma

**CITN-07:** A Phase II, Open-label, Multicenter, Randomized Study of CDX-1401, a Dendritic Cell Targeting NY-ESO-1 Vaccine, in Patients with Malignant Melanoma Pre-Treated with Recombinant CDX-301, a Recombinant Human Flt3 Ligand

# LabKey Data Portal Example – CITN-07 Study

## Log in Required for Access

### Study Overview

**CITN-07:** A Phase II, Open-label, Multicenter, Randomized Study of CDX-1401, a Dendritic Cell Targeting NY-ESO-1 Vaccine, in Patients with Malignant Melanoma Pre-Treated with Recombinant CDX-301, a Recombinant Human Flt3 Ligand

**Study Status:** Cohorts 1 & 2 fully enrolled. Cohorts 3 & 4 enrolling effective with Amendment 3.

#### Primary Objectives:

1. To determine whether the immune response to NY-ESO-1 elicited by vaccination with CDX-1401 (anti-DEC205-NY-ESO-1 fusion protein vaccine) plus polyinosinic-polycytidylic acid stabilized with poly-L-lysine and carboxymethylcellulose (poly-ICLC) is substantially increased by prior expansion in the number of circulating dendritic cells (DC) by therapy with CDX-301 (fms-related tyrosine kinase 3 ligand [Flt3L]).
2. To determine whether the proportion of responders to NY-ESO-1 is >50% when T cell responses are elicited by vaccination with CDX-1401 plus poly-ICLC in combination with CDX-301 (Flt3L) 75 mcg/kg/day administered prior to vaccination: i) for 5 days in both of the first two vaccine cycles; and ii) for 5 days in the first vaccine cycle only.

#### Secondary Objectives:

1. To assess the effect of the vaccine regimen on immune responses to other ongoing and nascent antitumor response antigens associated with melanoma (e.g., PRAME, MAGE-A3, p53, and gp100) as well as memory viral responses (influenza A) and chronic viral responses (Cytomegalovirus [CMV], Epstein-Barr virus [EBV])
2. To assess the effect of the vaccine regimen on the frequency and phenotypic character of peripheral blood mononuclear cell (PBMC) subsets including DCs, monocyte populations, T cells, and natural killer (NK) cells
3. To assess the safety, tolerability, and clinical efficacy of the vaccine regimens

Easy Links to individual data points

# Ultimate Goal:

*Integrated, Logistical Support for Correlative Studies to Accelerate Next Steps*

# Labkey Database Attributes - Integration

- **Cross-Integration with the BSI-II Biorepository Database**
  - Quickly associate biomarker data with Specimen QC and characteristics
- **QC'd Data, organized by Study for ALL correlative Studies**
  - All users reference the same QC'd data
  - Easy access for Multi-parametric analyses
- **Collaborative Platform for data sharing**
  - Access to 'Port Data Out' - TO Users/Collaborators/CIDC
  - Tacking for Samples OUT versus expected Data IN
  - Port Data In – FROM Collaborator/CROs/CIMACs
  - User Tracking
- **Integrate with Other Lab Tools**
  - RedCap; HaloLink; Document Control

# CITN CIML Success

## Quantity of Specimens

### In 5+ years– to the end of 2017:

- **>60,000** bio-specimens Collected, Processed, stored: (blood, tumor, tissue)
- **~2200** shipments Received, Managed

### In 2016 and 2017 alone the CIML:

- Coordinated biomarker studies and **~190 shipments** of samples to Collaborators/CROs.

| Bio-Specimen Type* | Received 2017 | Used 2017  | Out 2017    | Stored To Date | Used To Date | Destroyed To Date | Lost To Date | Out To Date  | Currently Stored |
