Objective for this talk:

1) Paradigm shift in Oncology
   - What cures people
     - Proof of concept
   - Its just not for melanoma

2) Identification of good/bad risk factors /
   - Immunoprofiling
   - tailoring treatment / combinations

3) The next five years – How to get to 100%
   "Thinking outside the box"

EARLE A. CHILES RESEARCH INSTITUTE

The practice of oncology is undergoing a transformation.

EARLE A. CHILES RESEARCH INSTITUTE

The practice of oncology is undergoing a transformation.

Why?

New Paradigm

EARLE A. CHILES RESEARCH INSTITUTE

- The immune system is the "agent" that improves outcome and **CURES** people with metastatic solid cancer.

New Paradigm

EARLE A. CHILES RESEARCH INSTITUTE

- The immune system is the "agent" that improves outcome and **CURES** people with metastatic solid cancer.
- **Fundamental shift in our understanding of cancer.**

Type, Density, and Location of Immune Cells Within Human Colorectal Tumors Predict Clinical Outcome

Jérôme Galon,[1*†] Anne Costes,[1] Fatima Sanchez-Cabo,[2] Amos Kirilovsky,[1] Bernhard Mlecnik,[2] Christine Lagorce-Pagès,[3] Marie Tosolini,[1] Matthieu Camus,[1] Anne Berger,[4] Philippe Wind,[4] Franck Zinzindohoué,[5] Patrick Bruneval,[6] Paul-Henri Cugnenc,[5] Zlatko Trajanoski,[2] Wolf-Herman Fridman,[1,7] Franck Pagès[1,7†]

The role of the adaptive immune response in controlling the growth and recurrence of human tumors has been controversial. We characterized the tumor-infiltrating immune cells in large cohorts of human colorectal cancers by gene expression profiling and in situ immunohistochemical staining. Collectively, the immunological data (the type, density, and location of immune cells within the tumor samples) were found to be a better predictor of patient survival than the histopathological methods currently used to stage colorectal cancer. The results were validated in two additional patient populations. These data support the hypothesis that the adaptive immune response influences the behavior of human tumors. In situ analysis of tumor-infiltrating immune cells may therefore be a valuable prognostic tool in the treatment of colorectal cancer and possibly other malignancies.

ORIGINAL REPORT

Histopathologic-Based Prognostic Factors of Colorectal Cancers Are Associated With the State of the Local Immune Reaction

Bernhard Mlecnik, Marie Tosolini, Amos Kirilovsky, Anne Berger, Gabriela Bindea, Tchao Meatchi, Patrick Bruneval, Zlatko Trajanoski, Wolf-Herman Fridman, Franck Pagès, and Jérôme Galon

Patients and Methods

We studied the intratumoral immune infiltrates in the center of the tumor and in the invasive margin of 599 specimens of stage I to IV colorectal cancers from two independent cohorts. We analyzed these findings in relation to the degree of tumor extension and to the frequency of recurrence.

Conclusion

Assessment of $CD8^+$ cytotoxic T lymphocytes in combined tumor regions provides an indicator of tumor recurrence beyond that predicted by AJCC/UICC-TNM staging.

Multivariate proportional hazard COX analysis among all patients with AJCC/UICC-TNM Stage I/II/III colorectal cancer

According to clinical parameters and immune parameters

COX analysis for DFS	HR	Log Rank *P*-values
Tumor (T) stage	1.24	0.29
N Stage	1.31	0.17
Gender	1.47	0.18
Number of total lymph nodes	1.13	0.68
Histological grade	0.69	0.29
Mucinous Colloide	1.29	0.47
Occlusion	1.03	0.94
Perforation	4.03	0.0084
Immune Score	**0.65**	**0.0003**

According to AJCC/UICC-TNM classification and immune score

COX analysis	DFS		OS		DSS	
	HR	*P*-value	HR	*P*-value	HR	*P*-value
AJCC/UICC-TNM	1.38	0.09 ns	1.18	0.29 ns	1.43	0.10 ns
Immune Score	0.64	**<0.0001**	0.71	**<0.0001**	0.63	**<0.0001**

Proof of Concept

Adoptive Immunotherapy with TIL has provided a proof of concept that tumor-specific T cells were present at the tumor site and could be isolated and used for effective treatment (50% patients).

EARLE A. CHILES RESEARCH INSTITUTE

Tailoring Therapy

What should “we” be doing?

For every trial:

- Require cancer slides or blocks.
- Biopsy: pre, mid or post tx.

EARLE A. CHILES RESEARCH INSTITUTE

Tailoring Therapy

What should “we” be doing?

For every trial:

- Require cancer slides or blocks.
- Biopsy: pre, mid or post tx.

WHY?

EARLE A. CHILES RESEARCH INSTITUTE

Tailoring Therapy

Most Cancer therapies are:

“One Size Fits All”

- That’s like treating all patients with a targeted agent, whether they have the mutation or not.

EARLE A. CHILES RESEARCH INSTITUTE

Tailoring Therapy

For colon cancer the answer may be as simple as Immunoscore (CD3 and CD8).

- Similar for other cancers?
- Or more complex?

EARLE A. CHILES RESEARCH INSTITUTE

Tailoring Therapy

For colon cancer the answer may be as simple as Immunoscore (CD3 and CD8).

- Similar for other cancers?
- Or more complex?

Likey more complex and variable!

So what should you do?

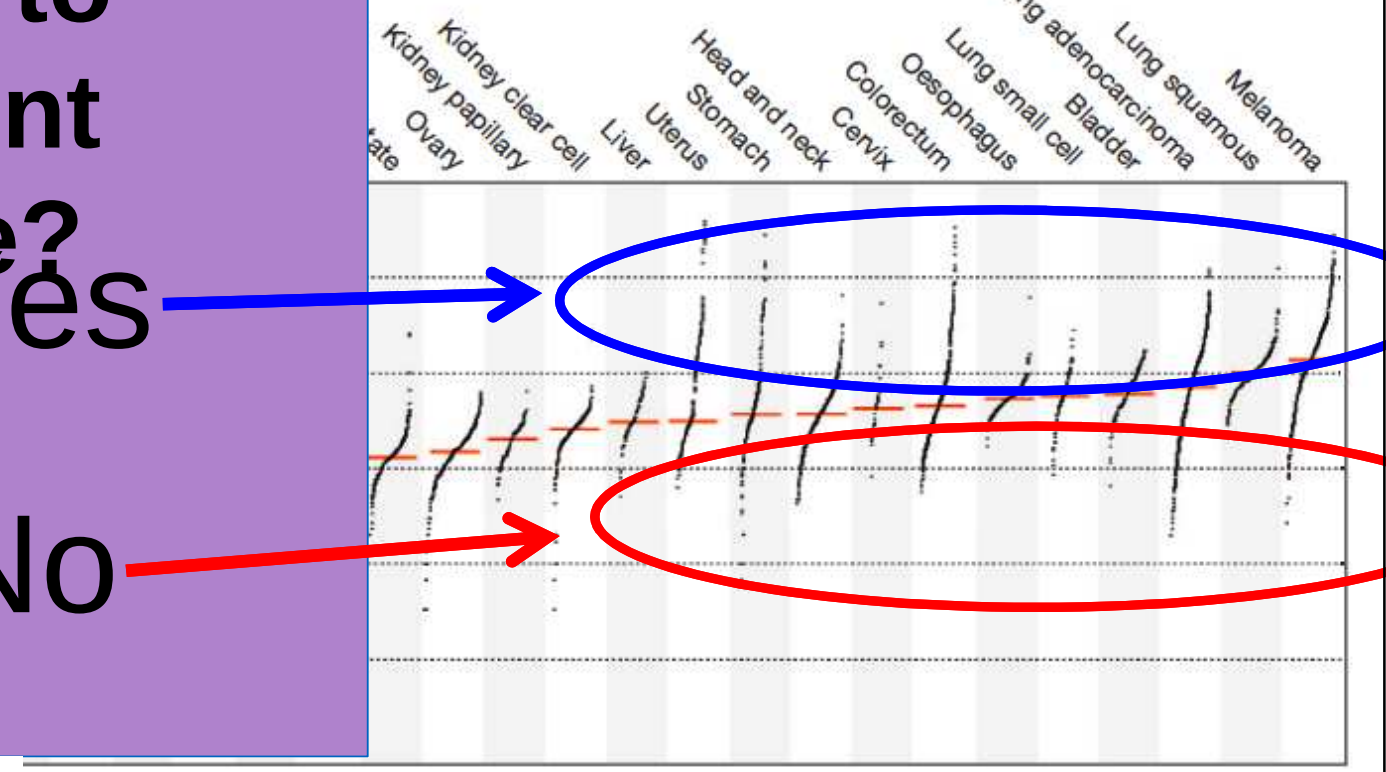
Respond to checkpoint blockade?

Yes

Hypothesis

No



Hypotheses:

1. Only patients with highly mutated tumors are immunoscore positive and contain tumor-specific T cells.

2. Only patients with pre-existing tumor-specific T cells will respond to checkpoint blockade.

What to do for patients who fail checkpoint blockade or are immunoscore negative?

- Combinations of standard anti-cancer therapies (Chemo / rad) – that may release non-mutated over-expressed antigens and help prime tumor-specific T cells.
- Combination immunotherapy with standard cancer vaccines.
- Next Generation vaccines that combine multiple/large numbers of epitopes with TLR agonists and adjuvants.
- Chimeric Antigen Receptor (CAR) T cells
  DARTs, Bi-Specifics
