Making Cancer History®

SITC, NIH Campus, April 2013

The Immune Response Against Cancer is Complex

Progression Free Survival in Melanoma Patients Treated with IL-2 vs Vaccine/IL-2

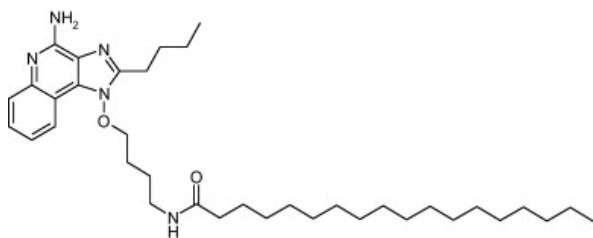

Responses Following Vaccination with Resiquimod

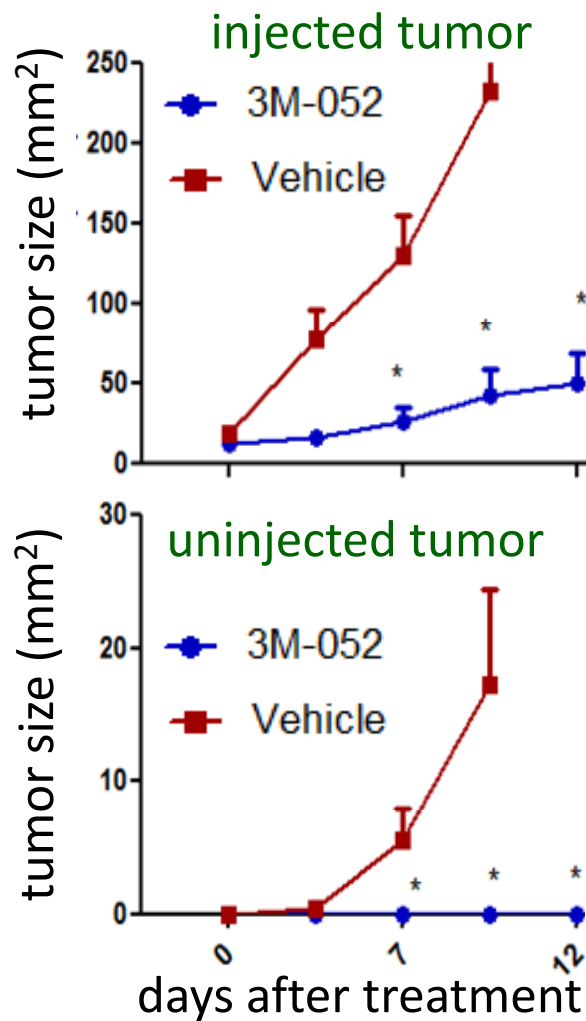

Baseline

After vaccination,
Resiquimod

Systemic Anti-tumor Activity after Local Treatment with 3M-052

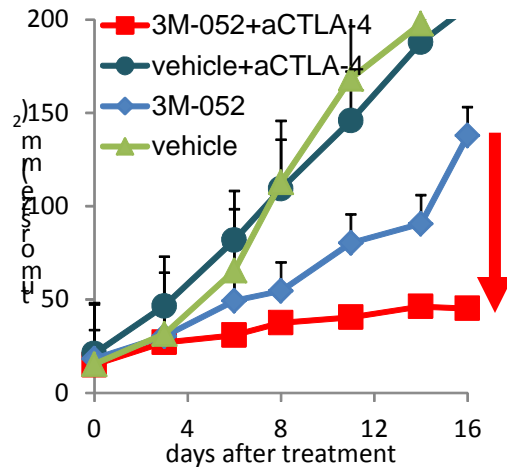

3M-052 (TLR7/8)

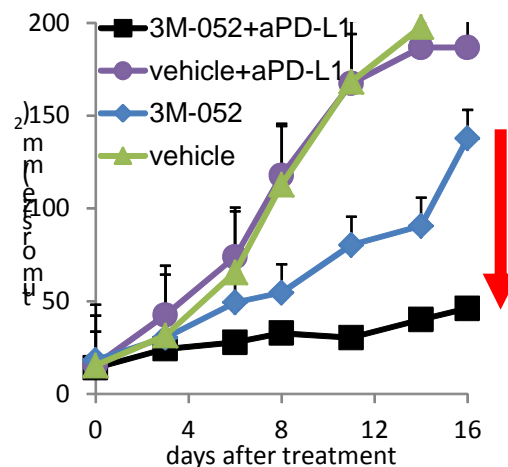

3M-052-based Combination Therapy

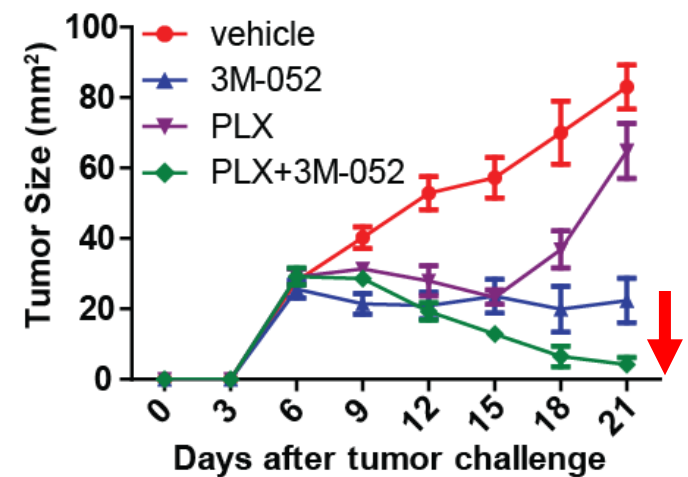

3M-052
+ α CTLA-4

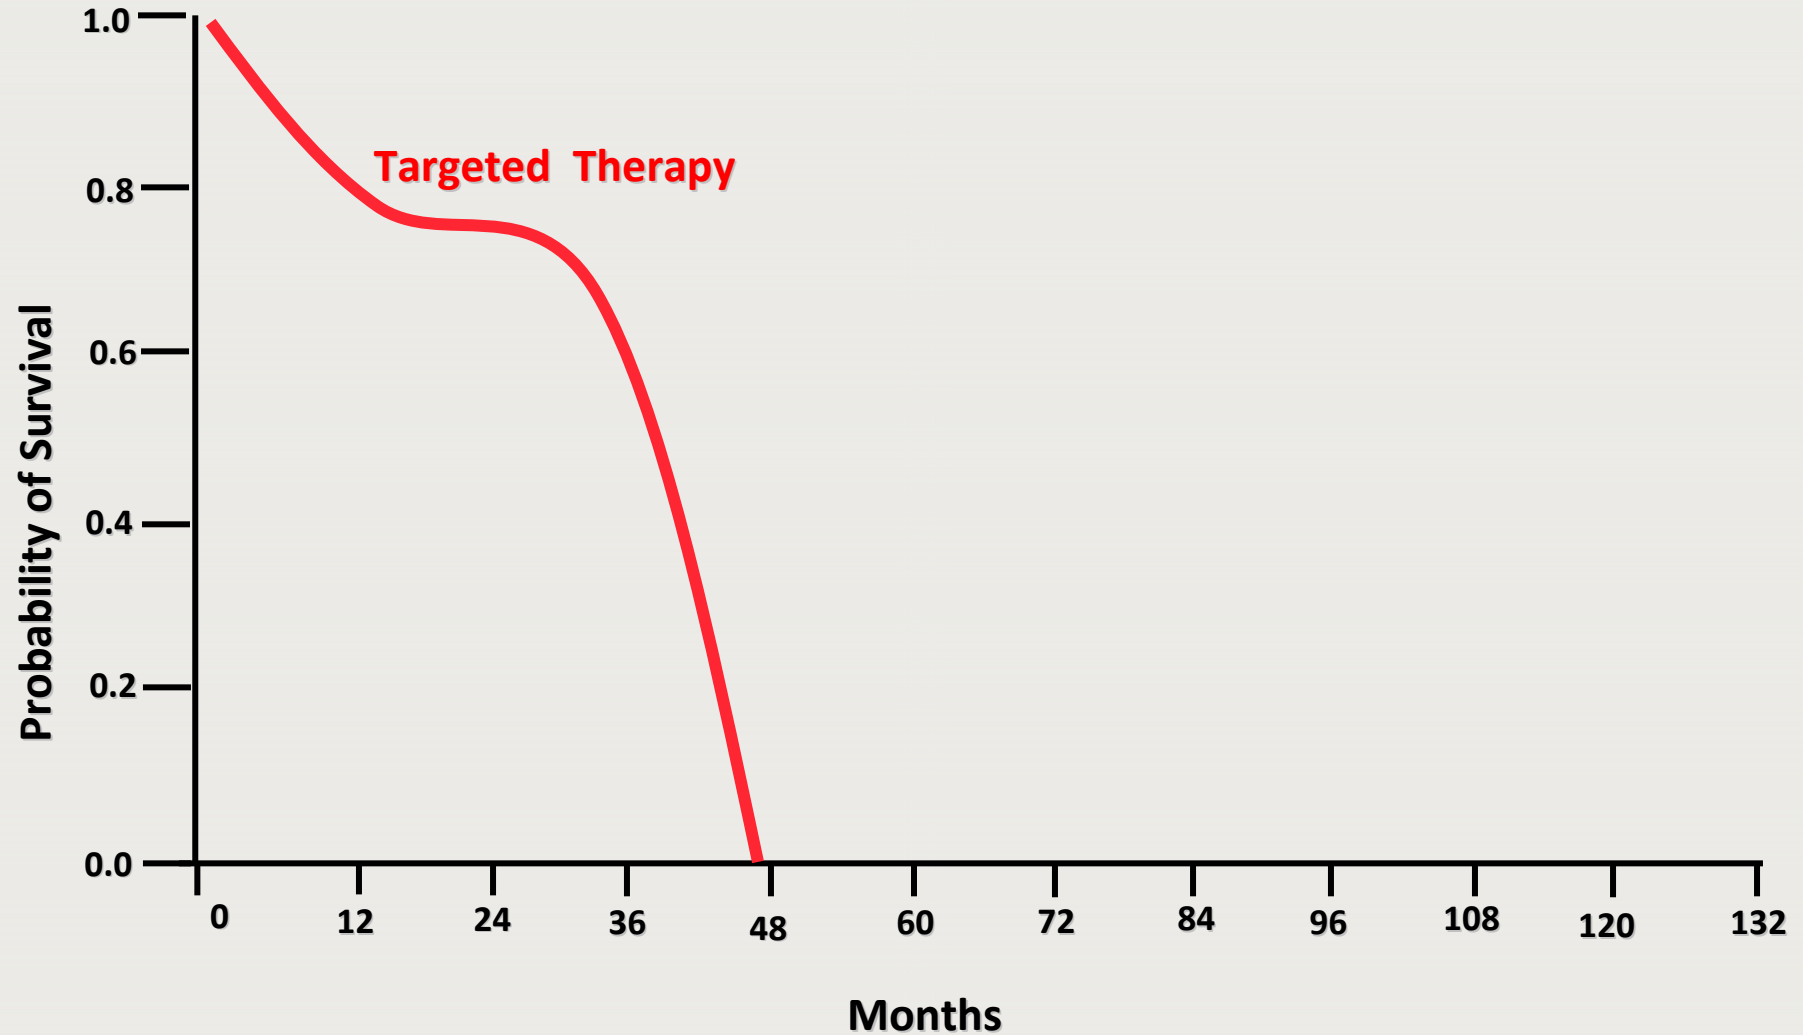

3M-052
+ α PD-L1

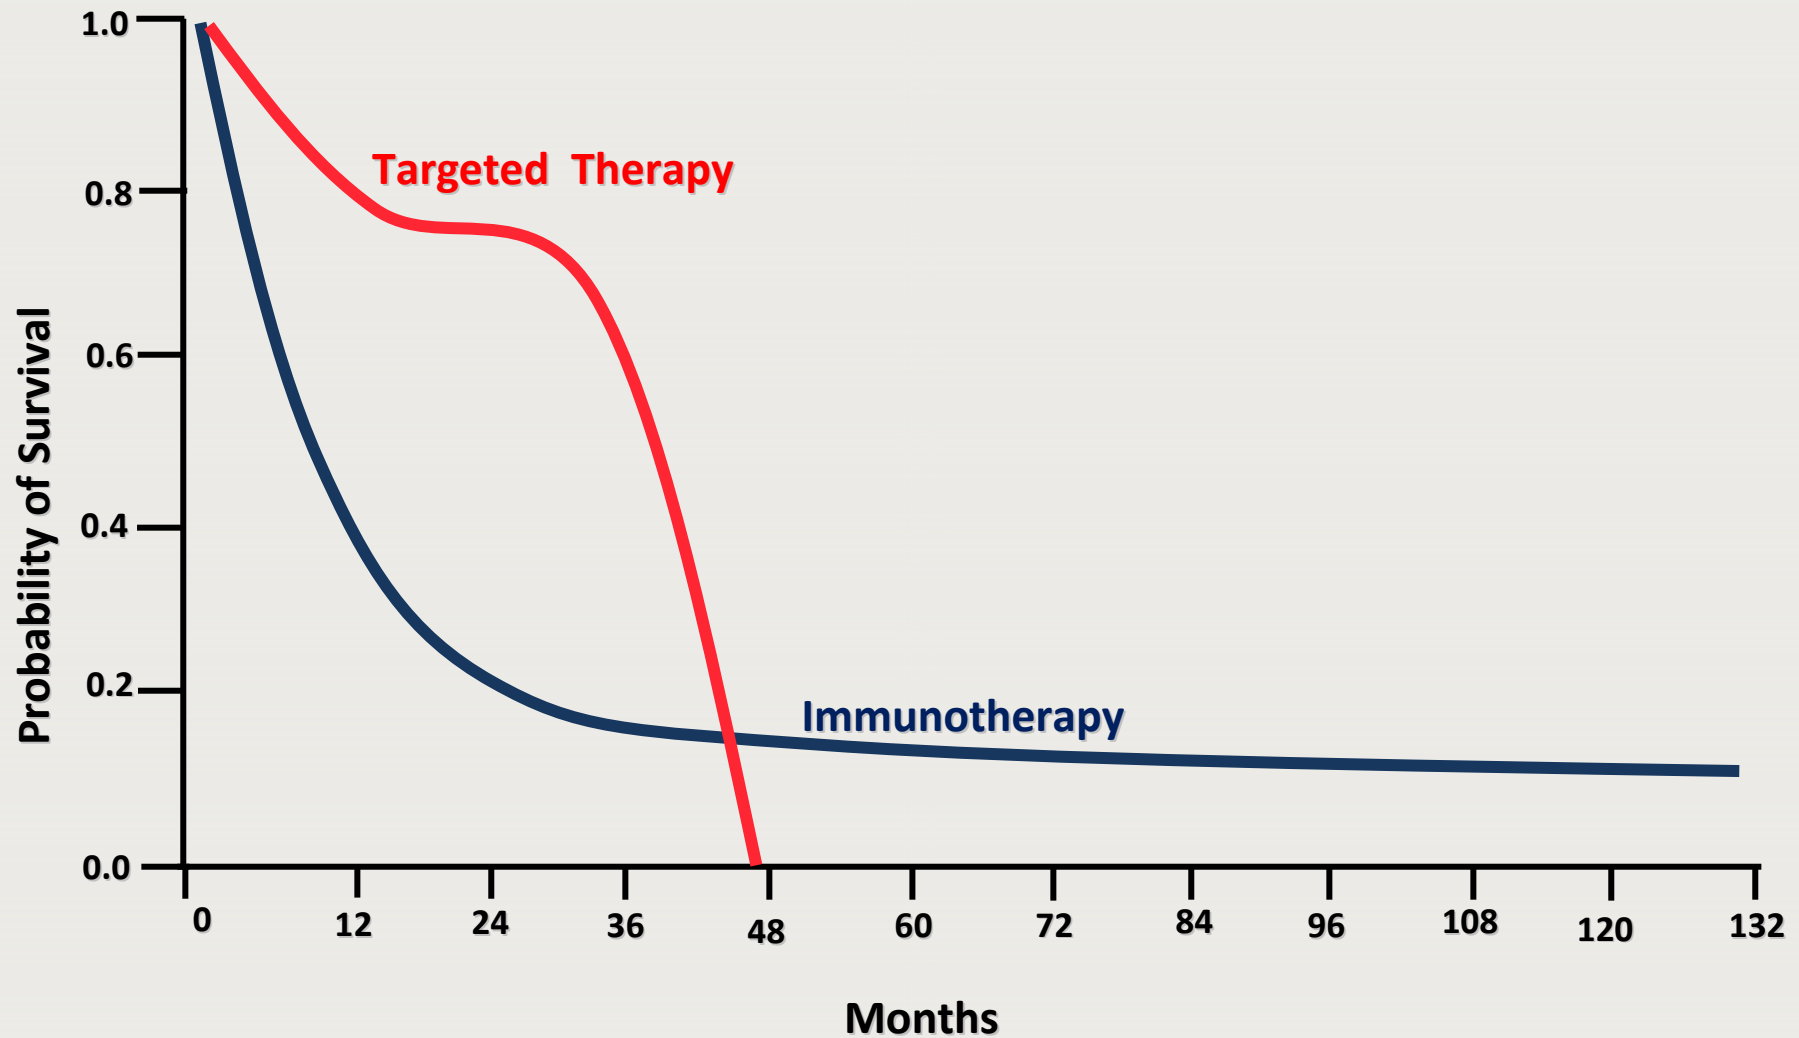

3M-052
+ mutBRAF inh.

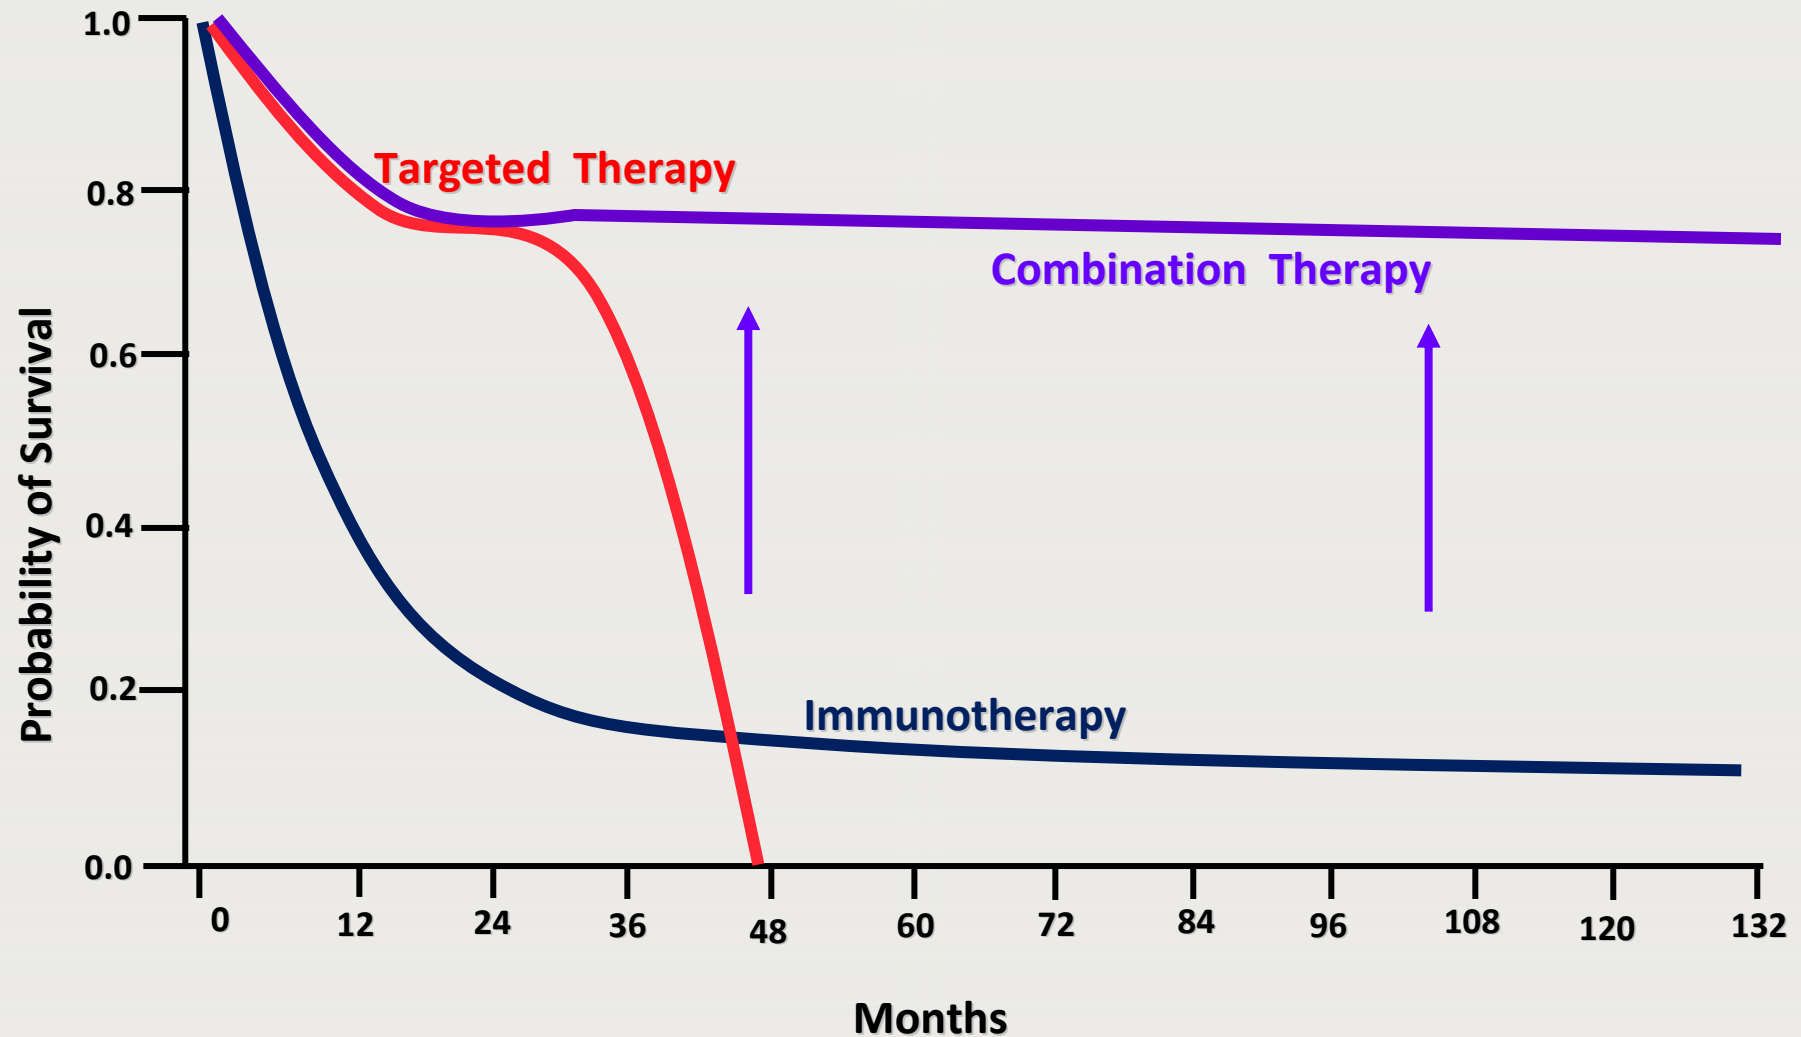

The Goal: Increase the Tail of the Curve

The Goal: Increase the Tail of the Curve

The Goal: Increase the Tail of the Curve

There is Great Potential for Targeted and Immune Therapy Combinations: However, there are too many possibilities.

Promising Targeted Agents

BRAFi
MEKi
cKITi
CDK4i
PI3Ki
AKTi
mTORi
ERKi
IGF1i
EGFi

10

Immune Agents

anti-PD-1
anti-CTLA4
anti-PDL1
anti-OX40
anti-CD40
IL-2
IFN
T-cells
IL-21
Vaccines
TLR Agonists

11

Treatment Schedules

Targeted then Immune Rx

Immune then Targeted Rx

Targeted and Immune Rx together at same time

3

330 trials X \$3-million/trial = ~\$1-billion

Solution: “De-Risk” Clinical Trials with Focused Modeling

- **In Vitro Models**
- **Mouse In Vivo Models**
- **Clinical Trial Monitoring**

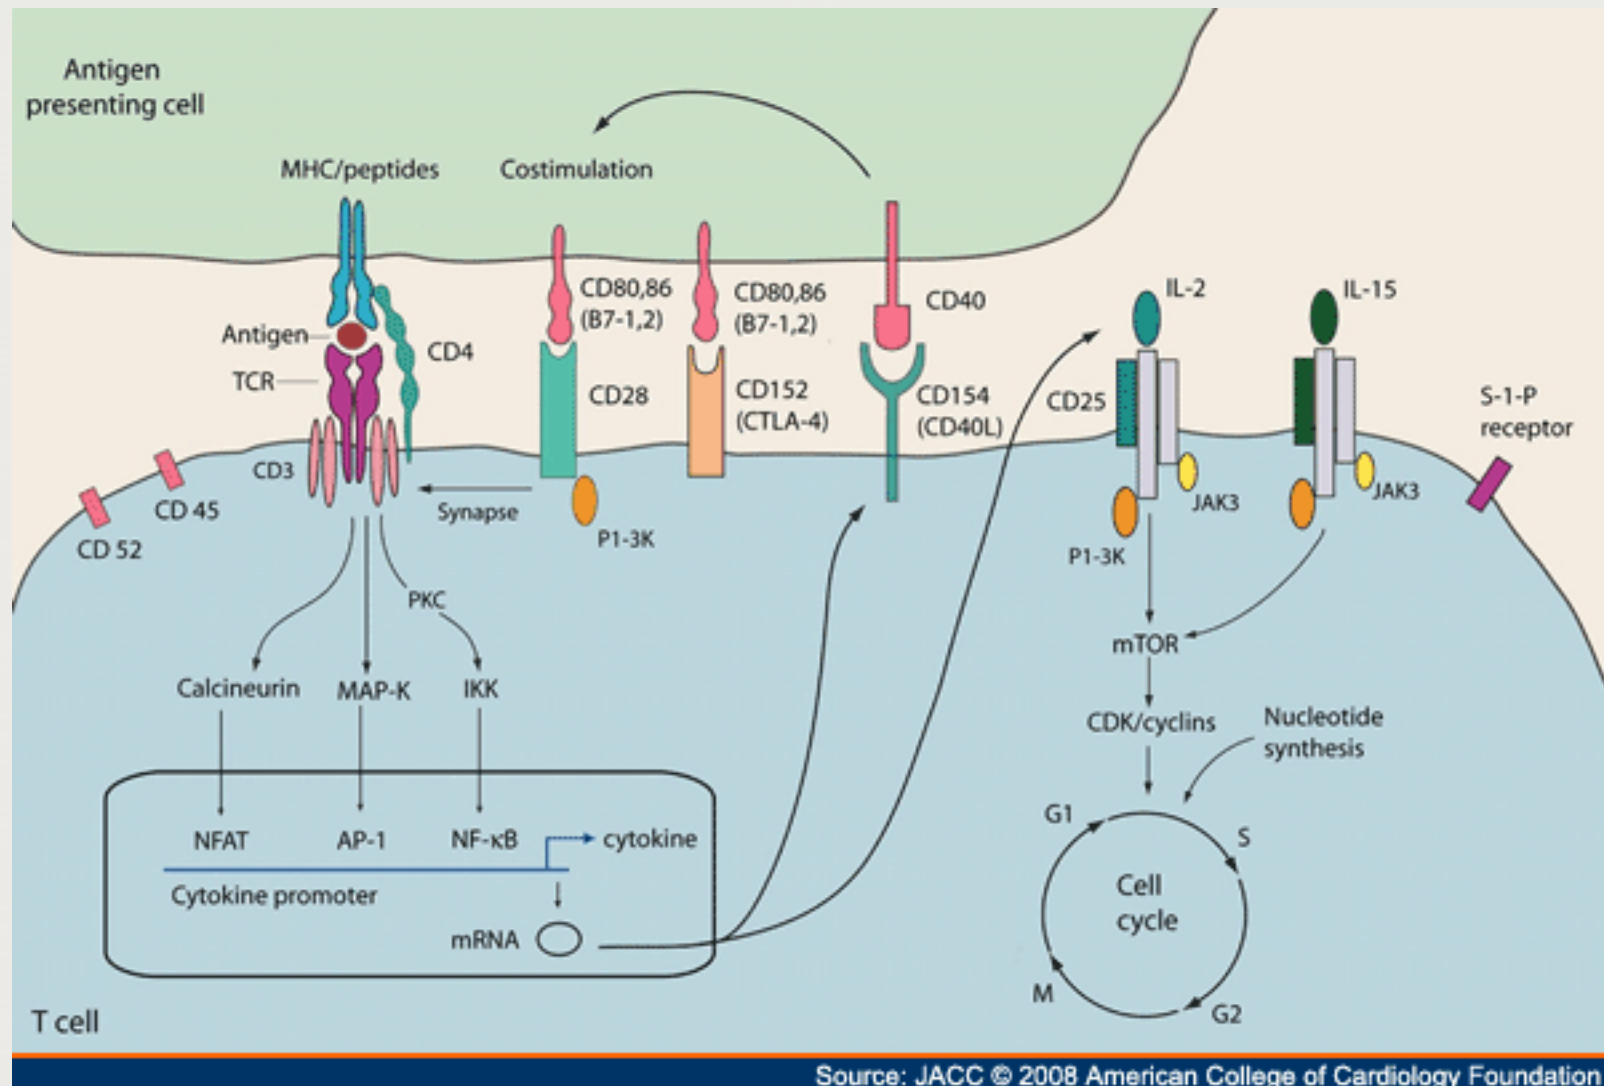

Goal is to Determine...

...Optimal Combination(s) of Agents

...Optimal Schedules

...the Effects of Targeted Agents on the Immune Response

T-cells and Tumors Share Common Signaling Pathways

Solution: “De-Risk” Clinical Trials with Focused Modeling

- **In Vitro Models**
- **Mouse In Vivo Models**
- **Clinical Trial Monitoring**

Mechanisms of T-cell Mediated Cytotoxicity: Active caspase-3 based Assay

Screen for Candidates to Combine with Immunotherapy

Treatment

- Treat 50,000 melanoma tumor cells with a chemical compound at a concentration of $1\mu\text{M}$ for 24 hours at 37°C .
- Treat tumor reactive TILs (Tumor infiltrating lymphocytes) with a chemical compound at a concentration of $1\mu\text{M}$ for 24 hours at 37°C .

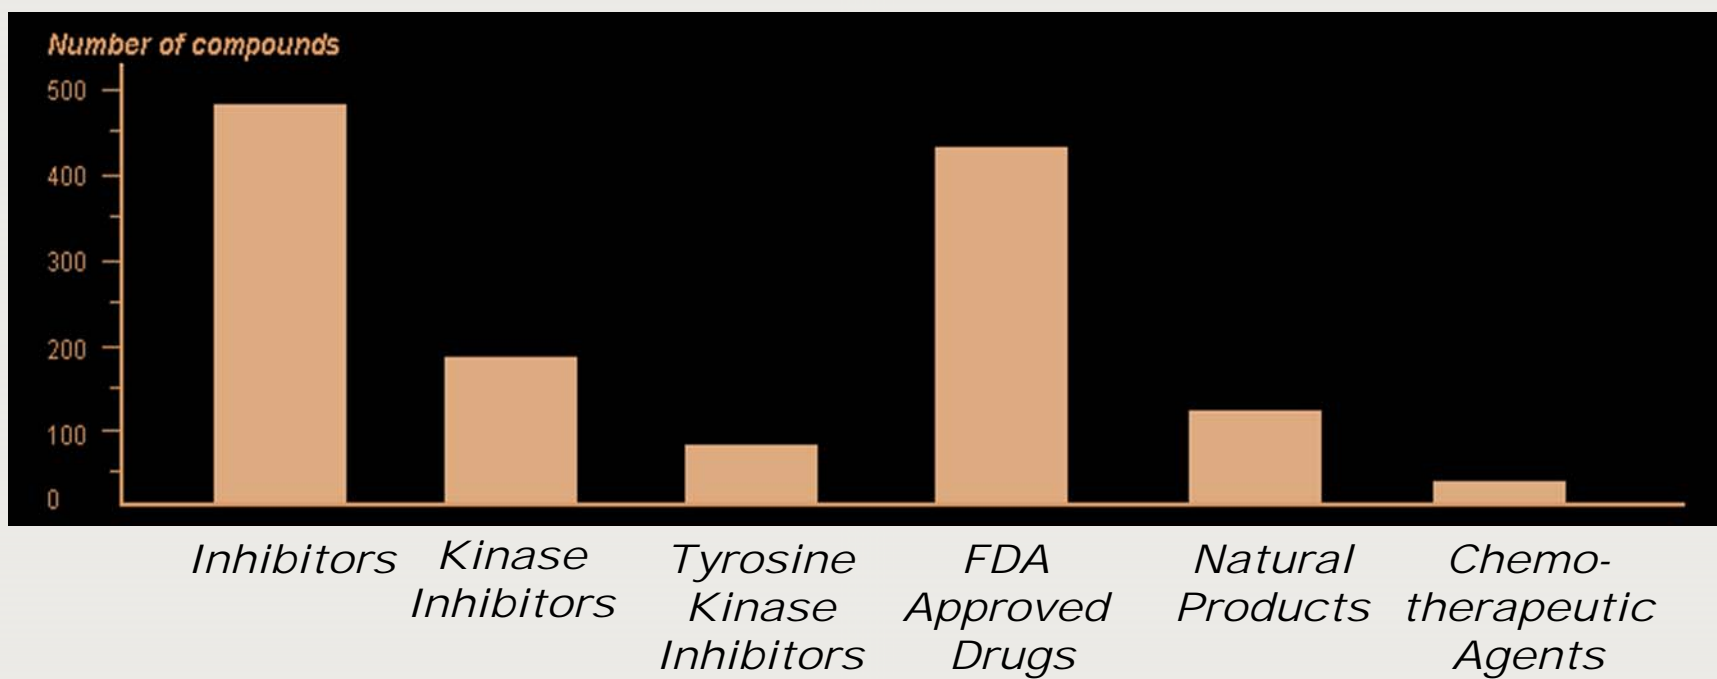

T-cell cytotoxicity assay

- At 24 hours, wash 1X and add tumor reactive TILs at a ratio of 3:1 (TIL:Tumor) to treated tumor cells and incubate for 3 hours at 37°C .
- At 24 hours, wash 1X and add tumor reactive treated TILs at a ratio of 3:1 (TIL:Tumor) to tumor cells and incubate for 3 hours at 37°C .

Staining with anti-Active Caspase Antibody

- Perform intracellular staining with anti-Active Caspase 3 Antibody
- Run FACS in a 96 well, high throughput fashion

Screen for Candidates to Combine with Immunotherapy

~ 850 bioactive compounds from
Selleckchem

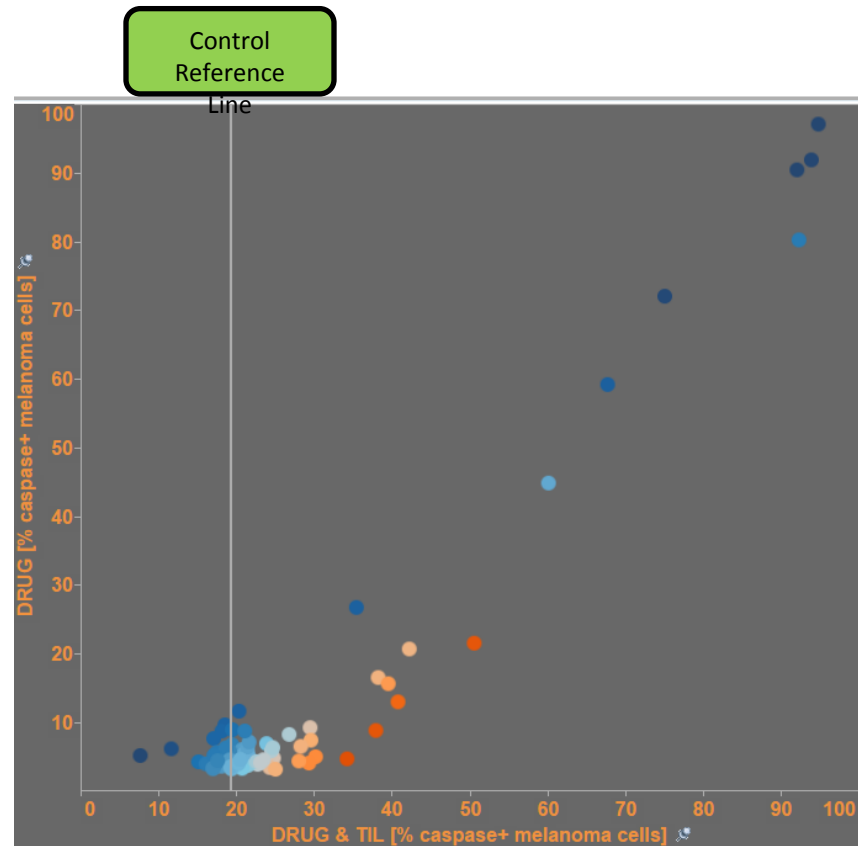

Screen for Candidates to Combine with Immunotherapy

Melanoma tumor line 2549

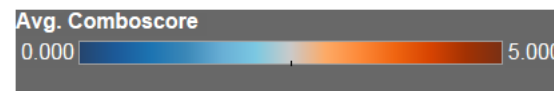

BRAF, NRAS, c-Kit Wildtype

Undergoing exome analysis

$[\% \text{Caspase+ Tumor cells}]_{\text{Drug}}$
(Apoptosis mediated by presence of Drug)

$[\% \text{Caspase+ Tumor cells}]_{\text{Drug+Tcells}}$
(Apoptosis mediated by presence of Drug and T cell cytotoxicity)

Drugs Plate 10:
representative plate

Treatment of Tumor with Compounds

$$\text{Melanoma Exposure COMBOSCORE} = \left[\frac{[\% \text{Caspase+ Tumor cells}]_{\text{Drug+Tcells}} - [\% \text{Caspase+ Tumor cells}]_{\text{Drug}}}{[\% \text{Caspase+ Tumor cells}]_{\text{Control+ T cells}} - [\% \text{Caspase+ Tumor cells}]_{\text{Control}}} \right]^2$$

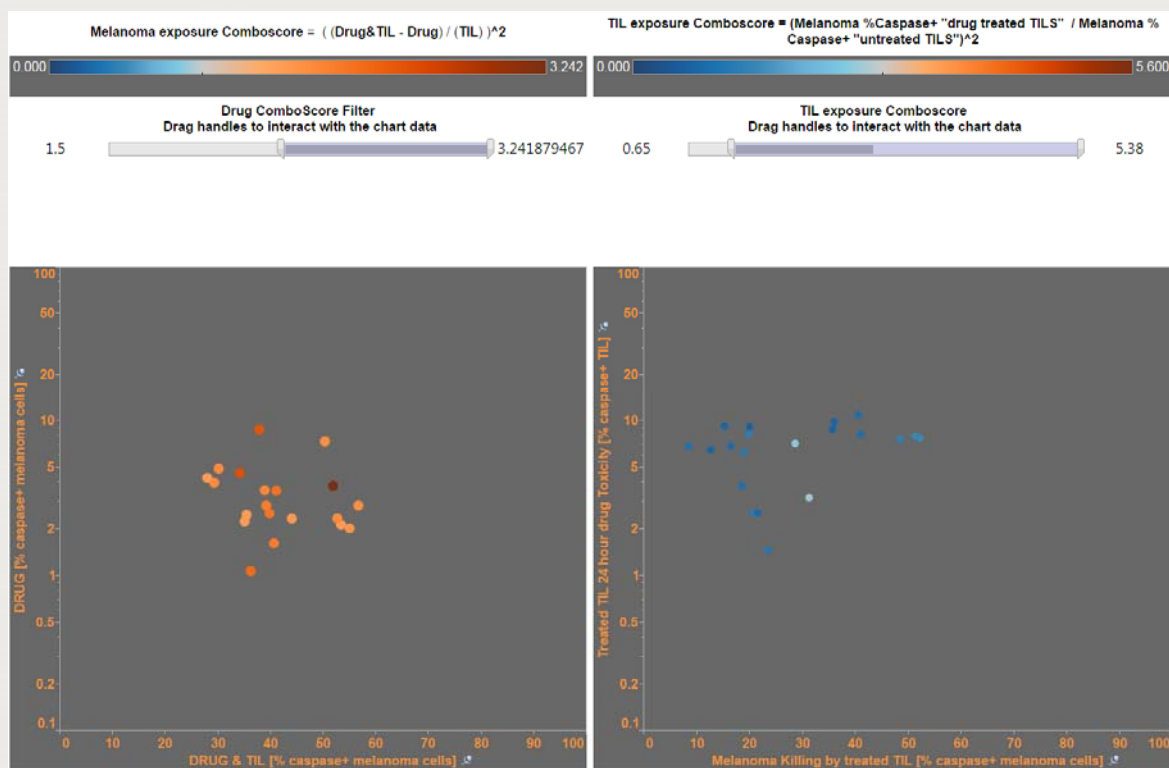

Treatment of TILs with Compounds

$$\text{TIL exposure COMBOSCORE} = \left[\frac{[\% \text{Caspase+ Tumor cells}]_{\text{Treated Tcells}}}{[\% \text{Caspase+ Tumor cells}]_{\text{Untreated Tcells}}} \right]^2$$

Top 20: Combination of Melanoma Exposure and TIL Exposure Comboscores

- WAY-600
- Cinacalcet hydrochloride
- VX-680
- U0126-EtOH
- Sunitinib Malate
- Rivaroxaban (Xarelto)
- RAF265
- PD0325901
- Irinotecan HCl Trihydrate (Campto)
- CI-1040 (PD184352)
- Capecitabine (Xeloda)
- Bumetanide
- BMS-708163
- Bleomycin sulfate
- AZD6244 (Selumetinib)
- Amuvatinib
- AMG900
- ADX-47273
- Abiraterone Acetate (CB7630)
- 17-AAG

Compounds at concentration tested are immunosparing and have high synergistic potential

Murine Melanoma Models

- **Transplantation models**
 - Xenograft models
 - Syngeneic models
- **Genetically engineered mouse model (GEM)**

Xenograft Model

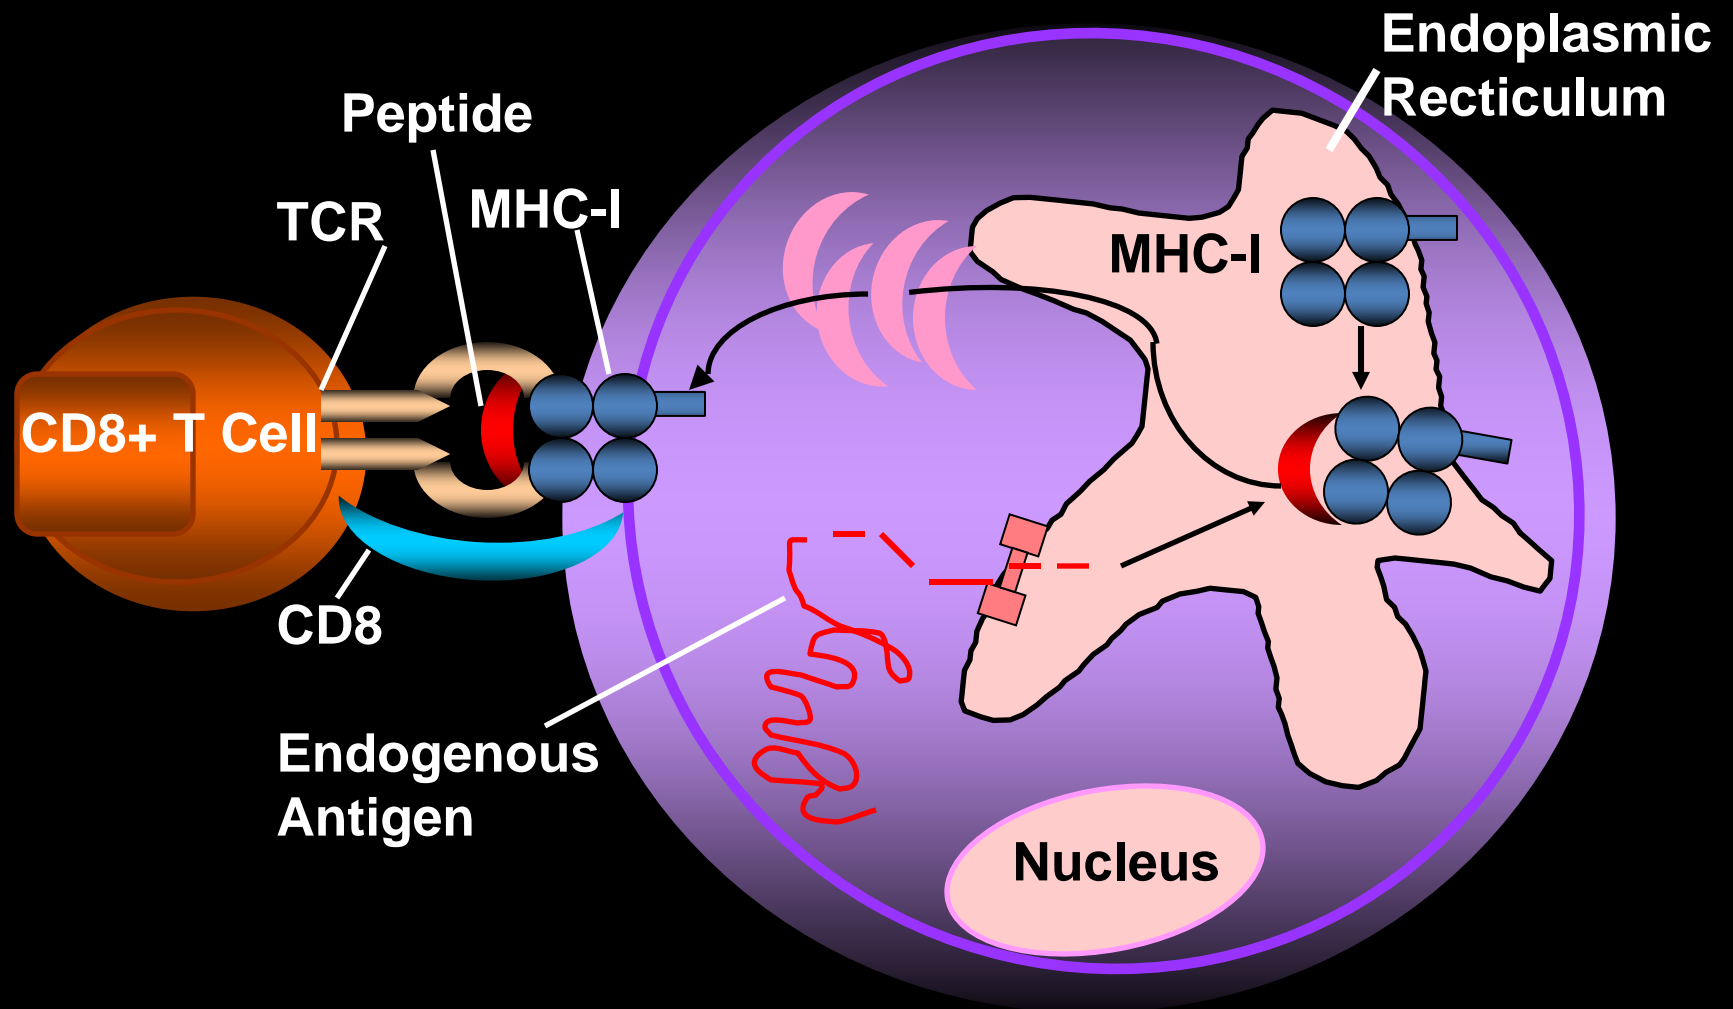

Advantage

- Ease of implantation and performance of therapeutic studies
- Rapidity of results
- Can be used to study targeted therapy

Drawback

- Requires immune-deficient mice
- Cannot fully replicate the interaction between tumor cells and host stromal cells

T-cells Can Recognize Intracellular Peptides Presented by MHC Molecules

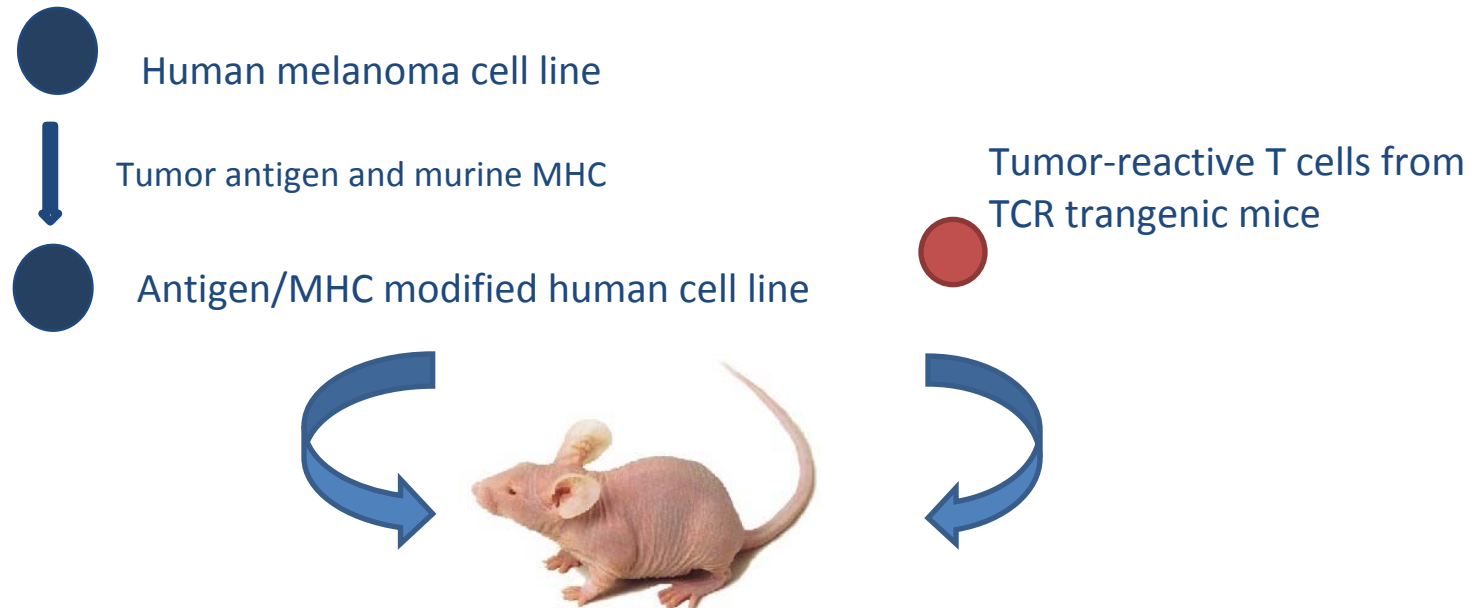

Antigen/MHC Modified Xenograft Model

Advantage

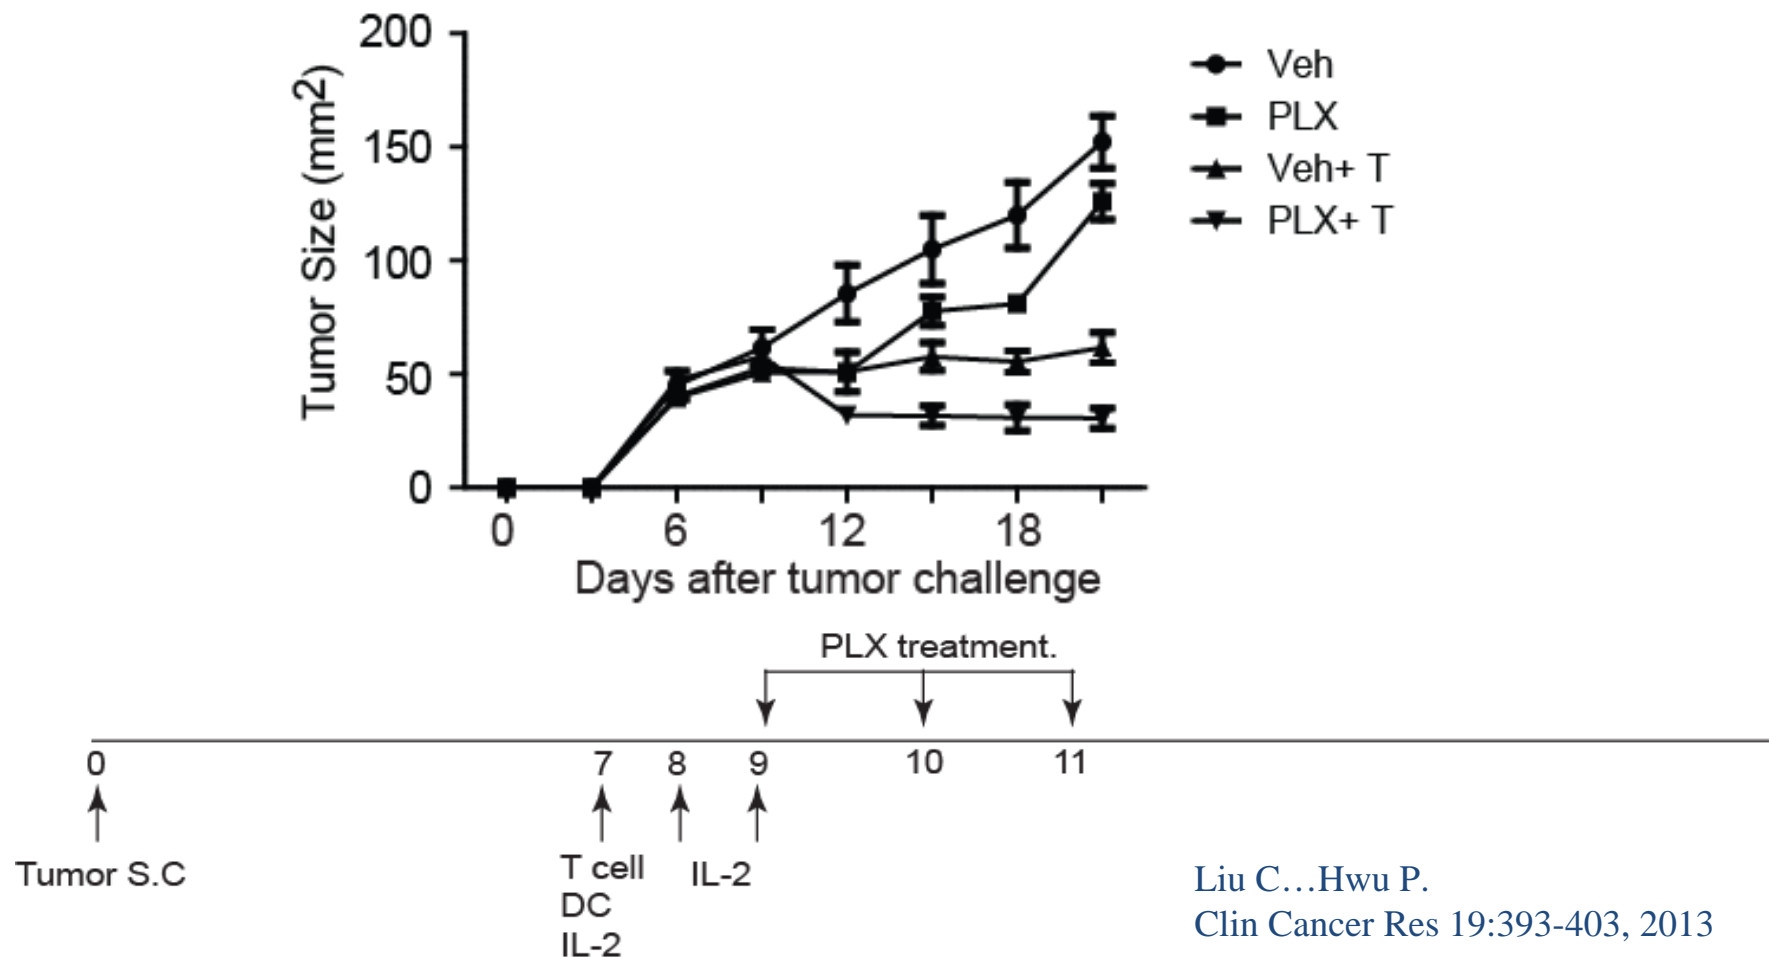

Provides a useful platform to evaluate the interactions between targeted agents and T-cell mediated immune response

Drawback

Cannot replicate the interaction between tumor-reactive T-cells and other immune effector cells

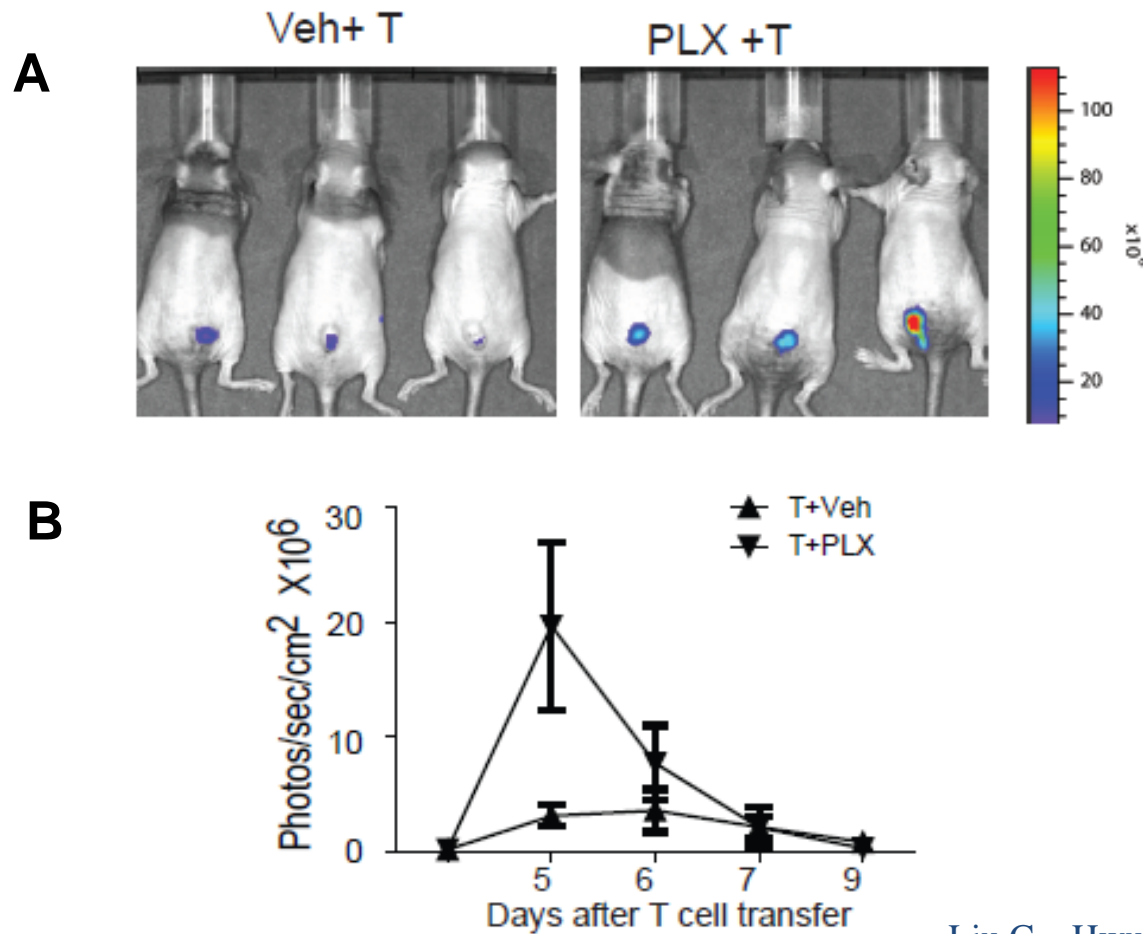

Combination of PLX4720 with Adoptive T-cell Therapy Leads to Enhanced Anti-tumor Activity (B6 nude mice)

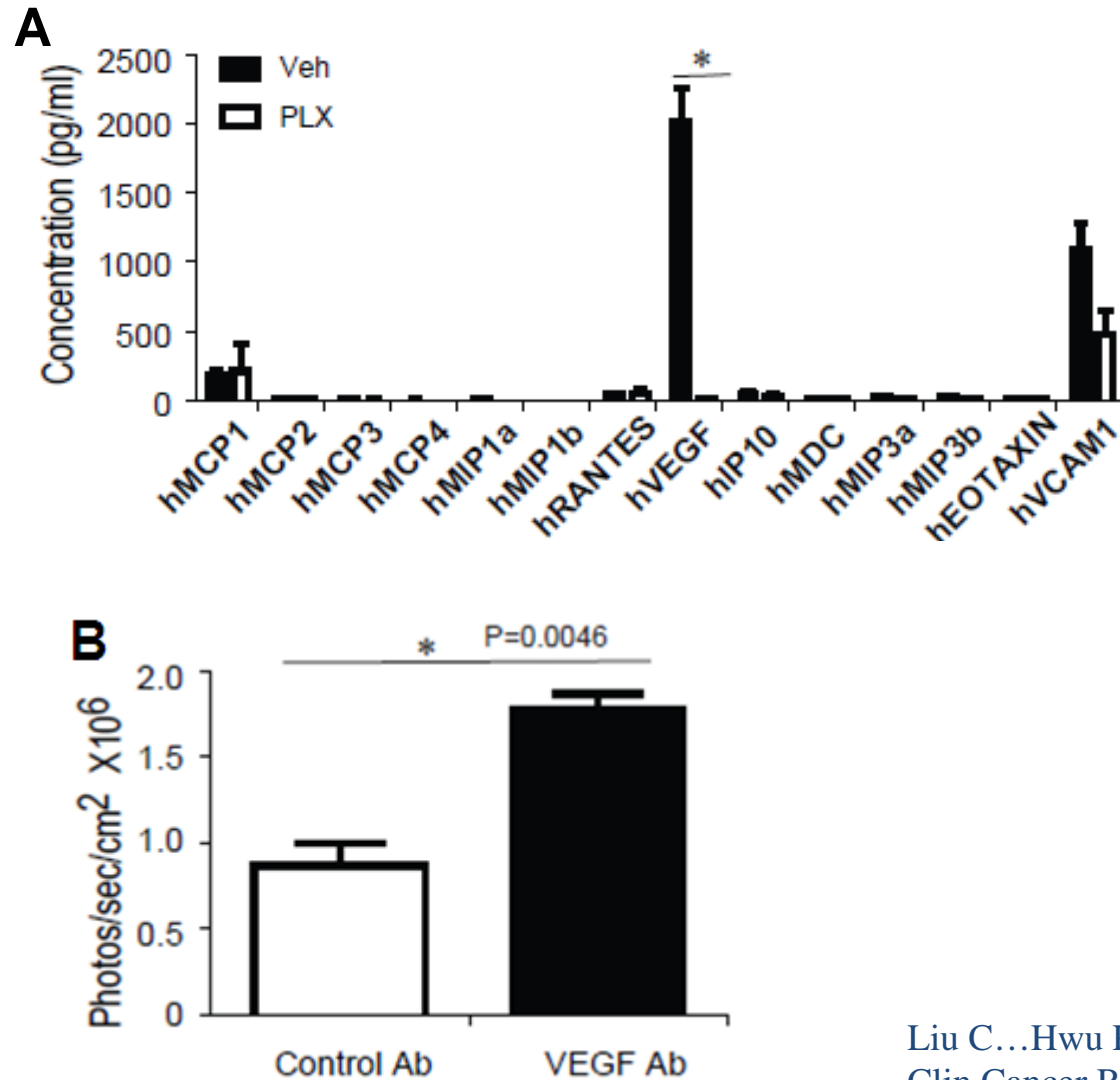

Liu C...Hwu P.
Clin Cancer Res 19:393-403, 2013

Administration of PLX4720 Increases Tumor Infiltration of Adoptively Transferred pmel-1 T-cells *in vivo*

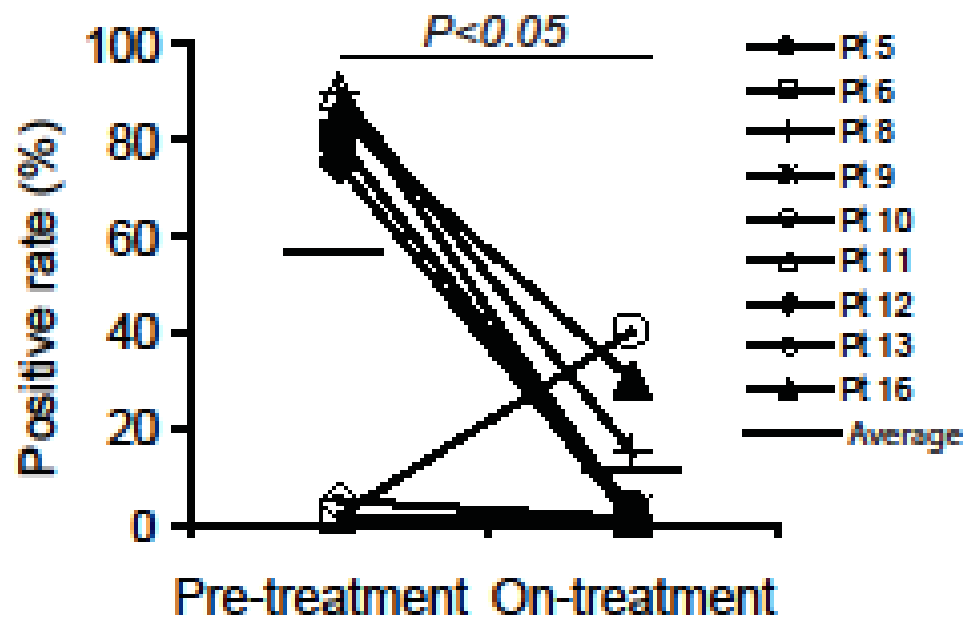

Liu C...Hwu P.
Clin Cancer Res 19:393-403, 2013

Increased T-cell Infiltration May be Mediated by Inhibition of VEGF Production from Melanoma Cells Treated with PLX4720

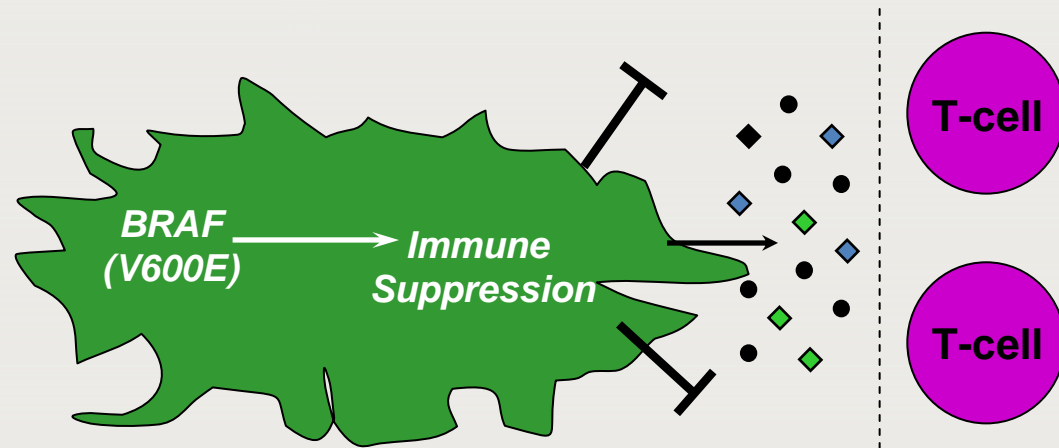

BRAF Inhibition Downregulates VEGF at the Tumor Site in Melanoma Patients

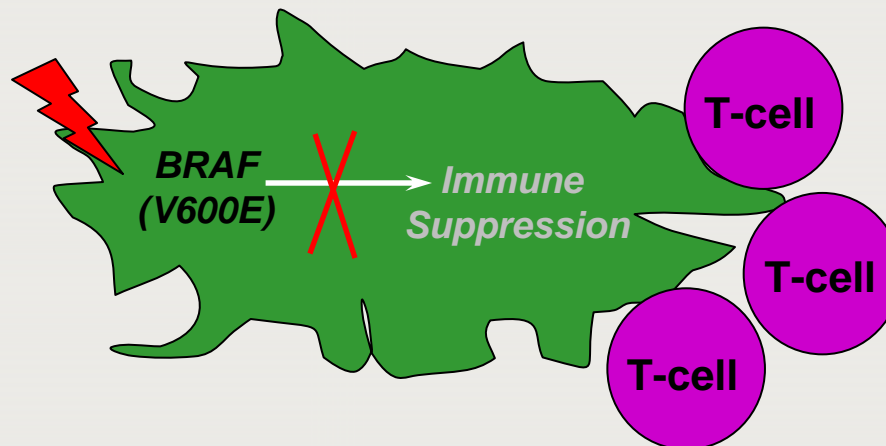

Liu C...Hwu P.
Clin Cancer Res 19:393-403, 2013

Combining BRAF(V600E) Inhibition and Immunotherapy

Immunotherapy
Alone

Immunotherapy
Plus BRAF(V600E)
Inhibition

Syngeneic Model

Advantage

- Useful for experiments that study immune responses to melanoma which require an intact immune system
- Useful to evaluate the therapeutic efficacy of targeted therapy

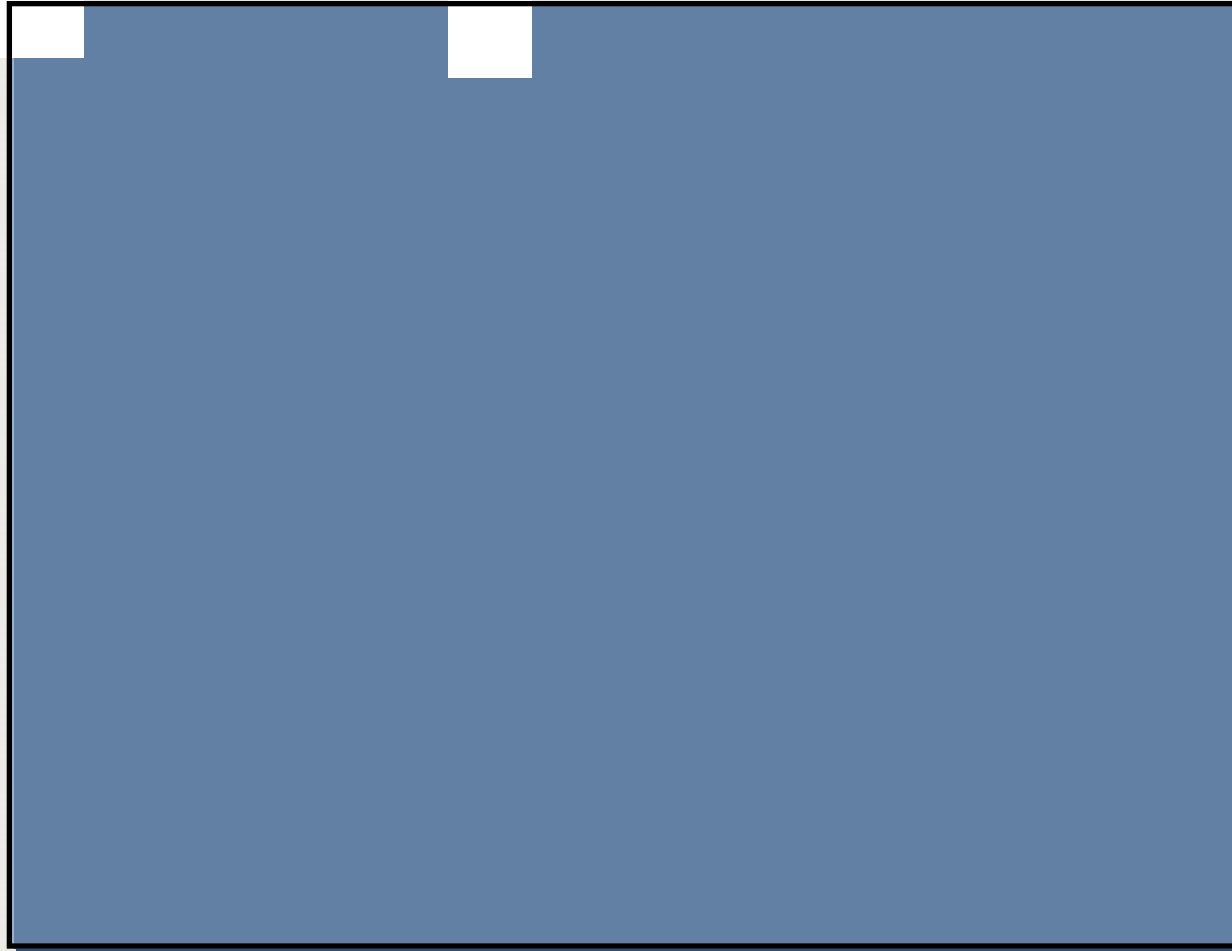

Drawback

- Unclear mutation status of most tumor cell lines
- Lack of information regarding the alterations that drive tumor formation and progression

Examples of murine tumor cell lines

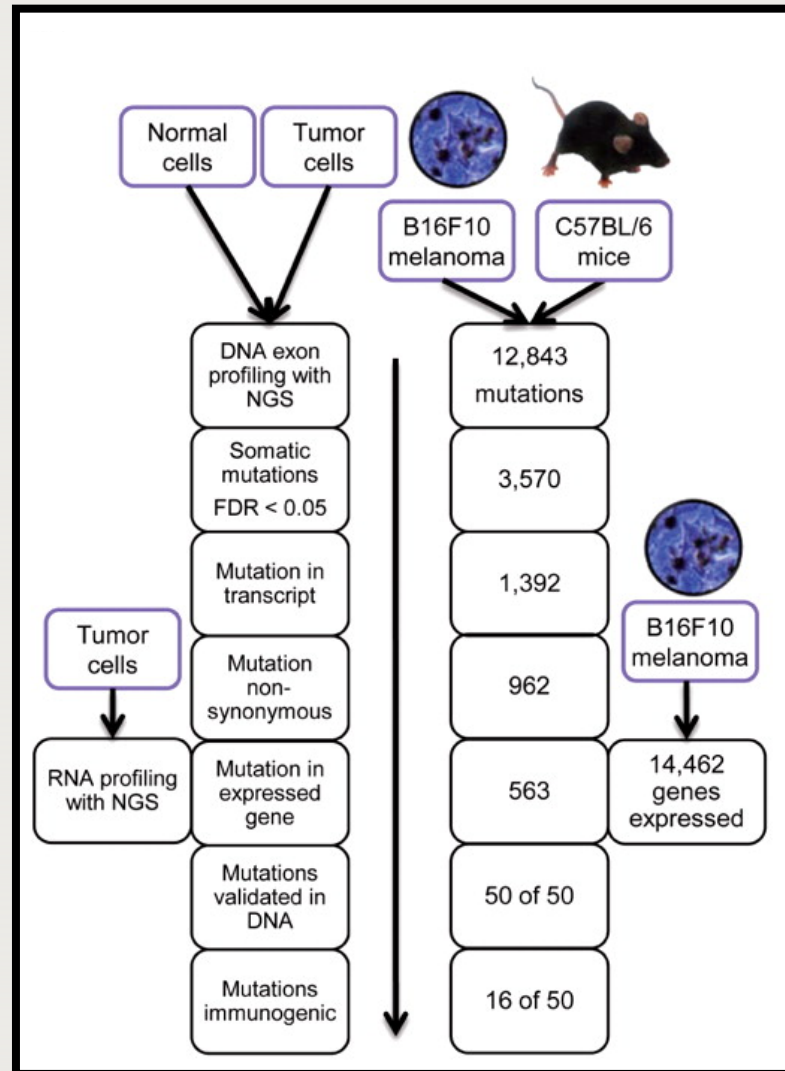

Name	Tumor type	MHC class I	Tumor Antigen	Mutation	PD-L1
BP	Melanoma	low	no gp100(with overexprssion cell line)	Pten ^{-/-} ; Braf ^{V600E}	+
MC38	Colon Cancer	High	no gp100(with overexprssion cell line)	Unknown	+
B16	Melanoma	-	Express gp100	Unknown	+

Delayed Tumor Progression in Tumor-bearing Mice Receiving anti-PD-1 and ACT Treatment

Increased Number of Transferred T-cells at the Tumor Site in Tumor-bearing Mice Receiving anti-PD-1 and ACT treatment

Peng W...Hwu P.
Cancer Res 72:5209-18, 2012

Genetically Engineered Mouse Model (GEM)

Advantage

- Has intact immune system
- Useful to assess tumor development and treatment

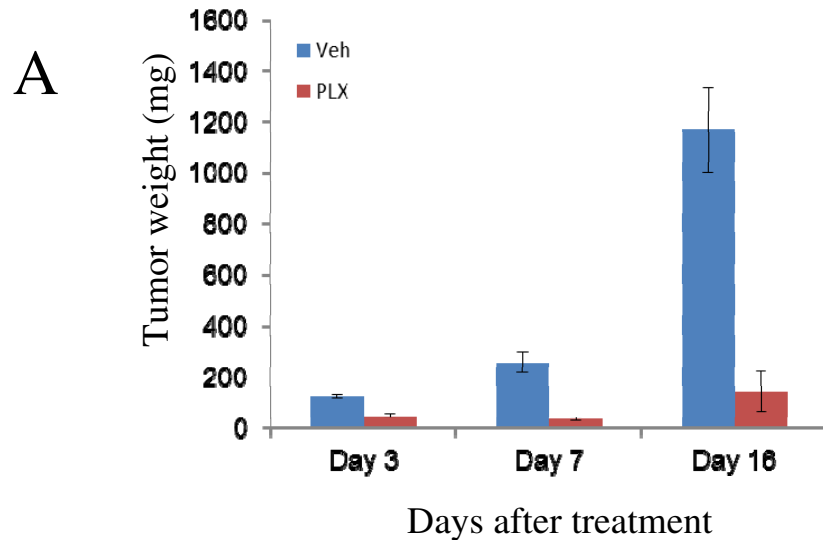

Drawback

- Few mutations which may cause tumors to be less immunogenic
- Difficult to obtain mice (costly and labor intensively)
- Challenging to perform therapy studies

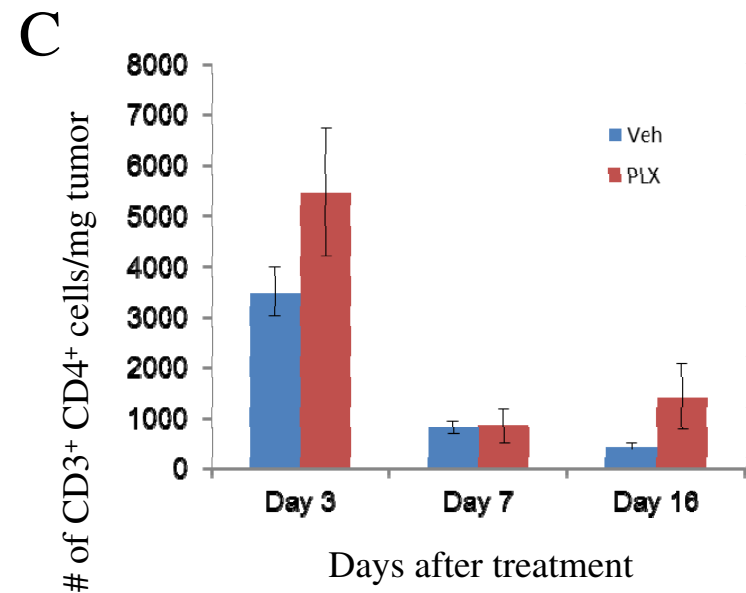

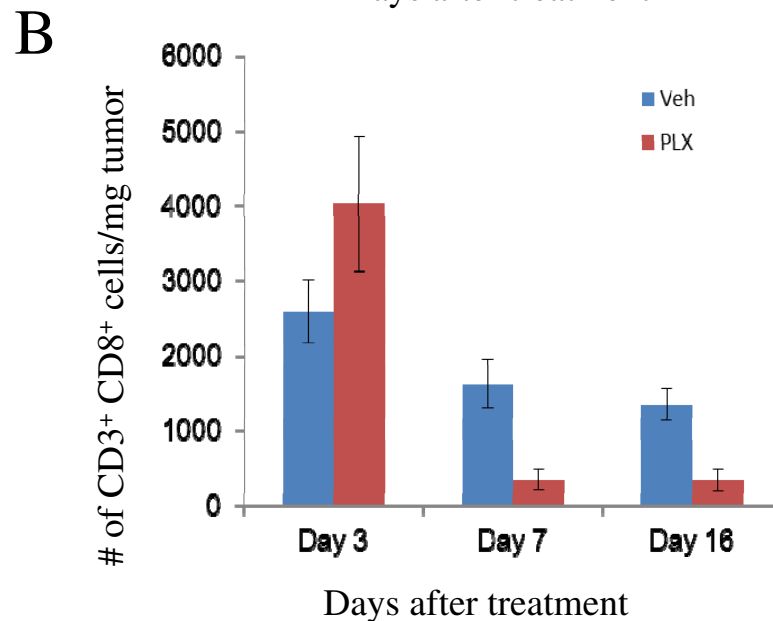

Examples of GEMs

Author (year)	Genetic Modification	Latency/Penetrance
Dankort et al. (2009)	TYR::CreERT2Pten ^{f/f} Braf ^{ca/wt}	10 weeks/100%
Chin et al. (1999)	TYR::rtTAtetO::HRas ^{G12V}	60 days/25%
Held et al. (2010)	TYR::CreERT2Pten ^{f/f} Cdkn2a ^{f/f} ± β -catenin ^{Loxex3/wt}	40 weeks/100%

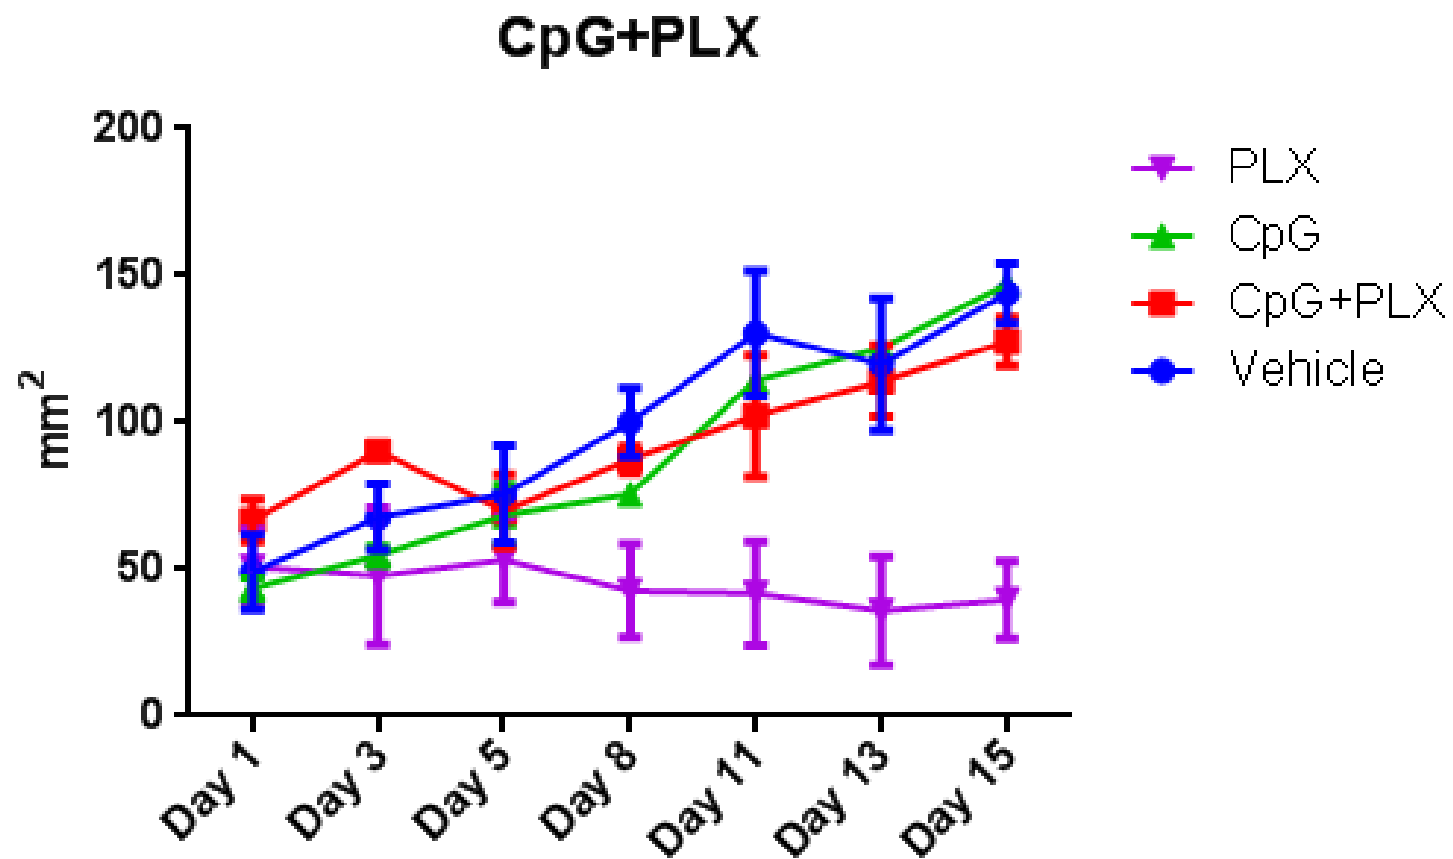

BP (mutant BRAF/PTEN^{-/-}) Conflicting Results

BP fish cells (1e6/mouse) were inoculated on day -7. Tumor-bearing mice were fed with a diet containing PLX4720 (417mg/kg) or control diet from day 0. Mice were sacrificed on day 3, 7 and 16. Tumors and spleens were harvested, single-cell suspensions were stained with anti-CD45, anti-CD3, anti-CD8 and anti-CD4 for flow cytometry assay.

PLX (BRAFi) +/- CpG in GEM Model

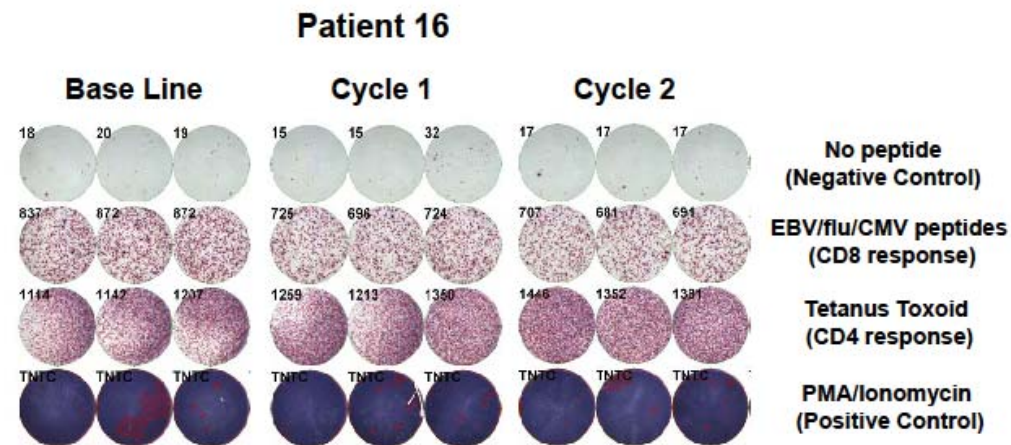

Solution: “De-Risk” Clinical Trials with Focused Modeling

- **In Vitro Models**
- **Mouse In Vivo Models**
- **Clinical Trial Monitoring**

Evaluation of Immune Cells in Patients Receiving a BRAF inhibitor (GSK)

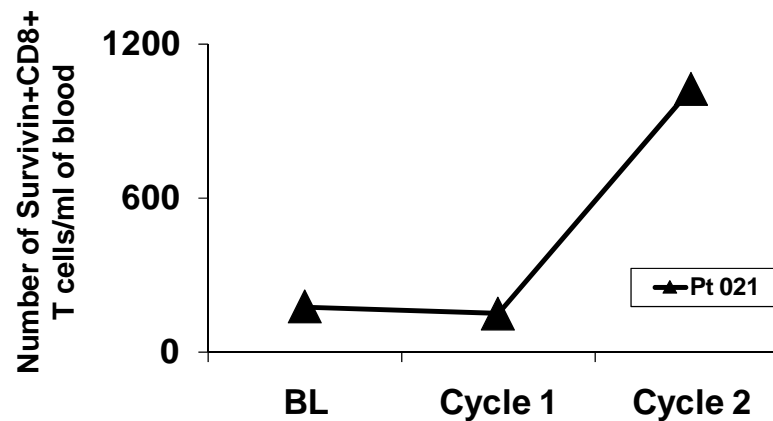

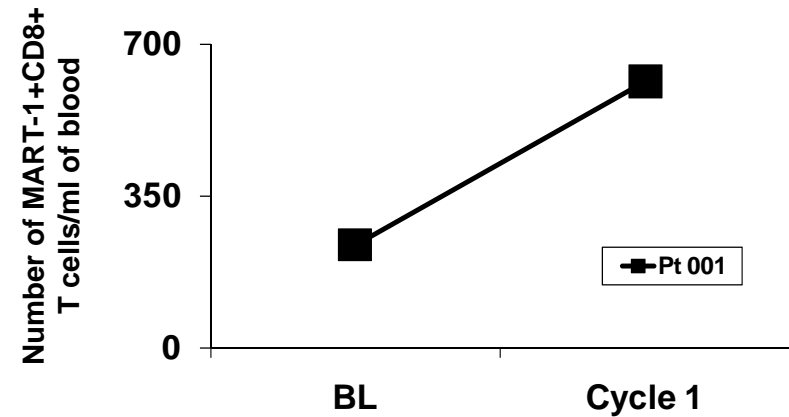

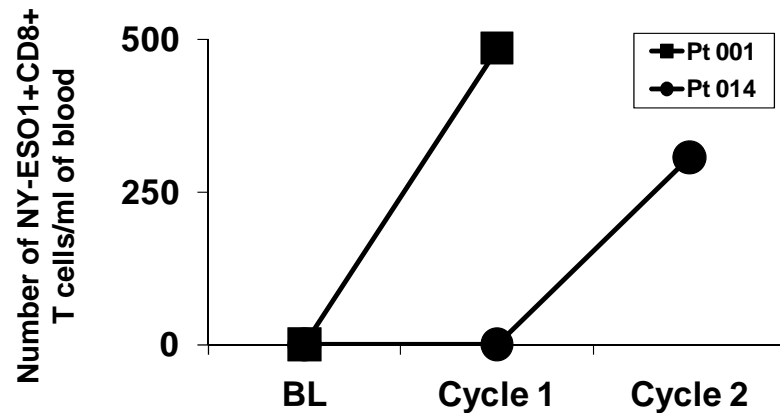

- **PBMC and serum were collected from 13 patients before and after a 28 day cycle of BRAF inhibition.**
- **No changes were found in serum cytokines, peripheral blood cell counts, T-cell subsets, or CD4 or CD8 recall responses.**

The V600 Mutant BRAF Inhibitor Treatment Does Not Affect CD4+ and CD8+ Memory T-cell Responses to Recall Antigens

Hong DS...Hwu P.
CCR 18(8):2326-35, 2012

Increase in Melanoma Antigen Specific T-cells After BRAF Inhibition

Future Studies

Understand the *in vivo* effects on the immune system of:

- **PI3K inhibitors**
- **AKT inhibitors**
- **MEK and BRAF/MEK inhibitors**

Solution: “De-Risk” Clinical Trials with Focused Modeling

- **In Vitro Models**
- **Mouse In Vivo Models**
- **Clinical Trial Monitoring**
