Immunotherapeutic Strategy:
Immune Checkpoint Blockade

Sumit K. Subudhi, MD, PhD

Associate Professor

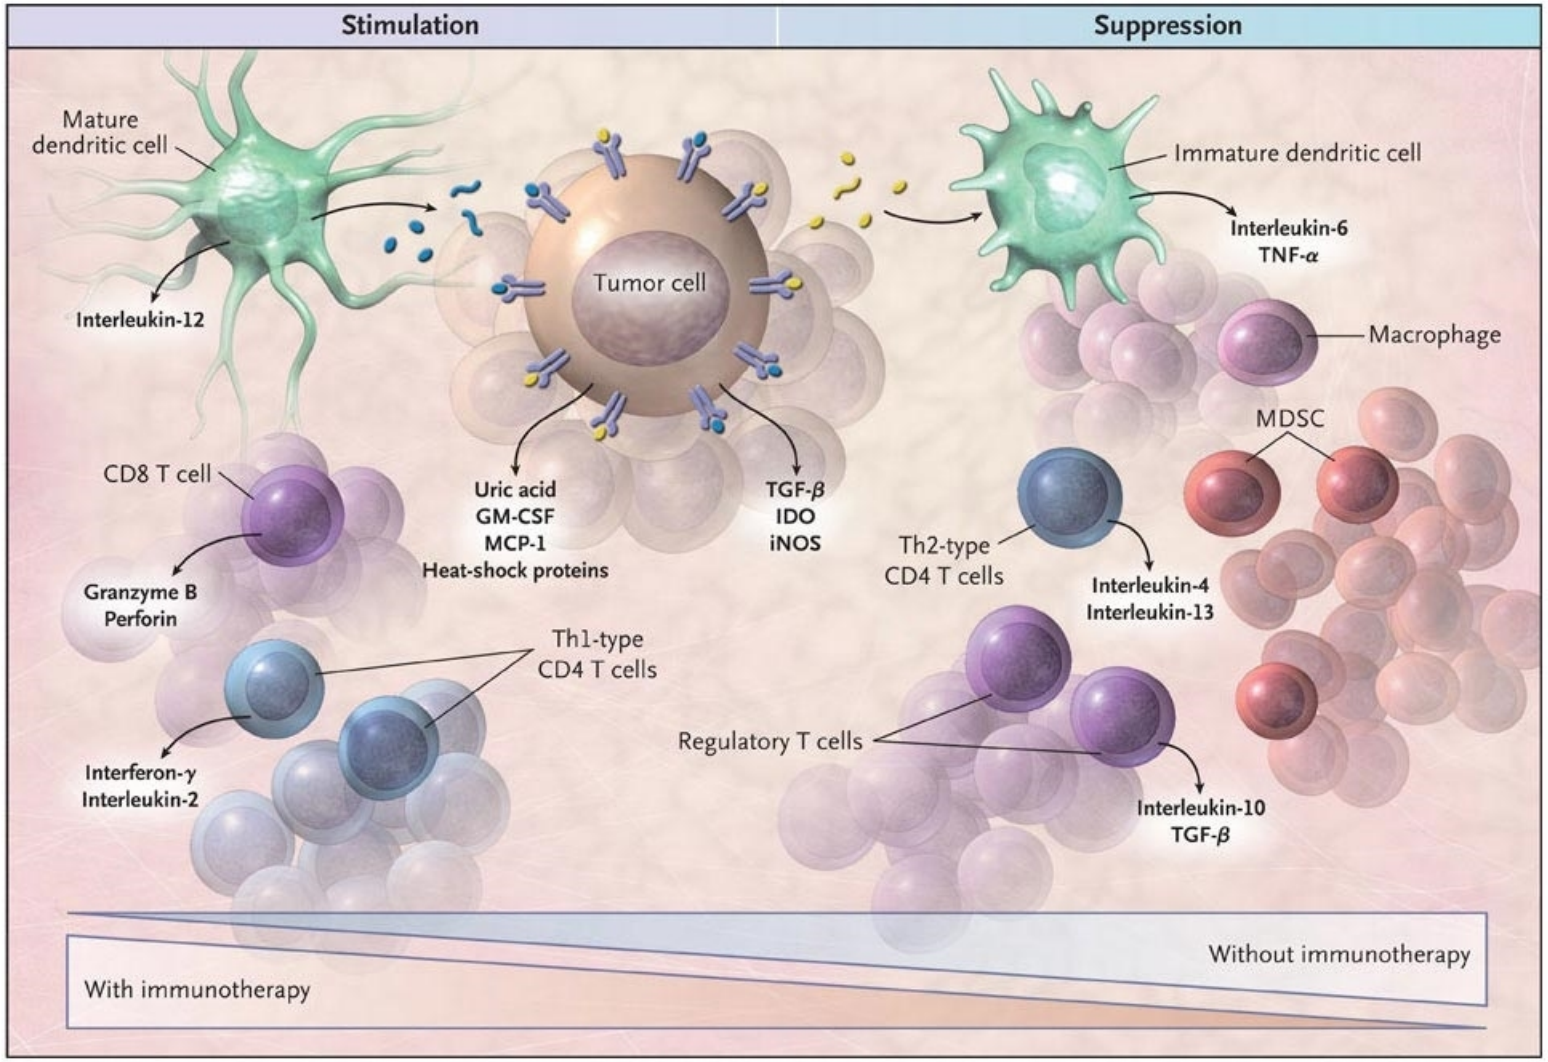
Genitourinary Medical Oncology

THE UNIVERSITY OF TEXAS
MD Anderson Cancer Center

Disclosures

- **Consulting or Advisory Role:** Amgen, Apricity Health, AstraZeneca, Bayer, Bristol-Myers Squibb, Dava Oncology, Dendreon, Exelixis, Janssen Oncology, and Kahr
- **Research Funding:** AstraZeneca, Bristol-Myers Squibb, and Janssen Oncology
- **Other (Joint Scientific Committee):** Janssen Oncology, Polaris
- I **will** be discussing non-FDA approved indications during my presentation.

Immune Tumor Microenvironment



Finn ON et al., *New Engl J Med*, 2008.

Immunotherapies

Not all the same!

- **Vaccines**
  - Directs immune system to focus on tumor antigen(s)
- **Cellular therapies**
  - CAR T cells target the tumor cells
- **Immune checkpoint therapies**
  - Increases T cell activation and function

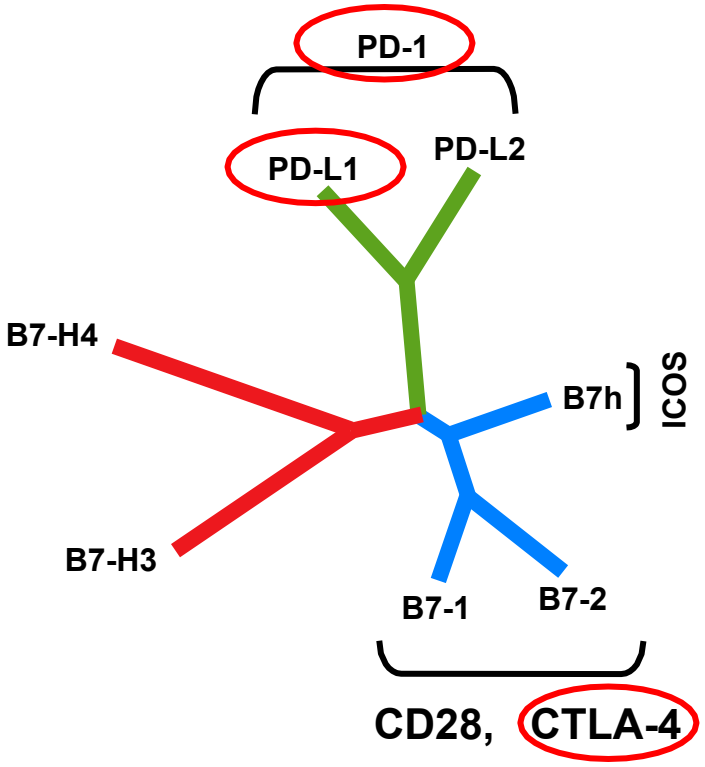
FDA-Approved Immune Checkpoint Therapies



Zang, X et al., *Proc Natl Acad Sci*, 2003.

Melanoma
- Ipilimumab (2011)
- Nivolumab (2014)
- Ipilimumab + Nivolumab (2015)
- Pembrolizumab (2019)
- Atezolizumab (2020)

Lung Carcinoma
- Nivolumab (2015)
- Pembrolizumab (2015)
- Atezolizumab (2016)
- Durvalumab (2018)
- Ipilimumab + Nivolumab (2020)

Urothelial Carcinoma
- Atezolizumab (2016)
- Avelumab (2017)
- Durvalumab (2017)
- Nivolumab (2017)
- Pembrolizumab (2017)

Renal Cell Carcinoma
- Nivolumab (2015)
- Ipilimumab + Nivolumab (2018)
- Avelumab (2019)

Colorectal Carcinoma
- Nivolumab (2017)
- Pembrolizumab (2017)
- Ipilimumab + Nivolumab (2018)

Head and Neck Squamous Cell Carcinoma
- Nivolumab (2016)
- Pembrolizumab (2016)

Lymphoma
- Nivolumab (2016)
- Pembrolizumab (2017)

Hepatocellular Carcinoma
- Nivolumab (2017)
- Pembrolizumab (2018)
- Ipilimumab + Nivolumab (2020)

Merkel Cell Carcinoma
- Avelumab (2017)
- Pembrolizumab (2018)

Cutaneous Squamous Cell Carcinoma
- Cemiplimab (2018)
- Pembrolizumab (2020)

Esophageal Carcinoma
- Pembrolizumab (2019)
- Nivolumab (2020)

Gastric/Gastroesophageal Adenocarcinoma
- Pembrolizumab (2017)

Cervical Carcinoma
- Pembrolizumab (2018)

Breast Carcinoma
- Atezolizumab (2019)

Uterine Carcinoma
- Pembrolizumab (2019)

Mesothelioma
- Ipilimumab + Nivolumab (2020)

Basal Cell Carcinoma
- Cemiplimab (2020)

Challenges/Limitations of Immune Checkpoint Therapies

- Measuring disease burden / treatment response
  - Immune-related response criteria (irRC)
- Subset of patients benefit
- Toxicities
  - Immune-related adverse events (irAEs)

Delayed Responses with Ipilimumab

Screening

Week 12
Initial increase in
total tumour burden (mWHO PD)

Week 16
Responding

Week 72
Durable & ongoing response

Moving Forward with Immune Checkpoint Therapies

- Improving patient selection
- Turning “cold” tumors “hot” / Resistance mechanisms
- Understanding toxicities

Moving Forward with Immune Checkpoint Therapies

- **Improving patient selection**
- **Turning “cold” tumors “hot” / Resistance mechanisms**
- **Understanding toxicities**

Ways to Improve Patient Selection

- Identify patients who will more likely respond
- Exclude patients who will most likely not respond

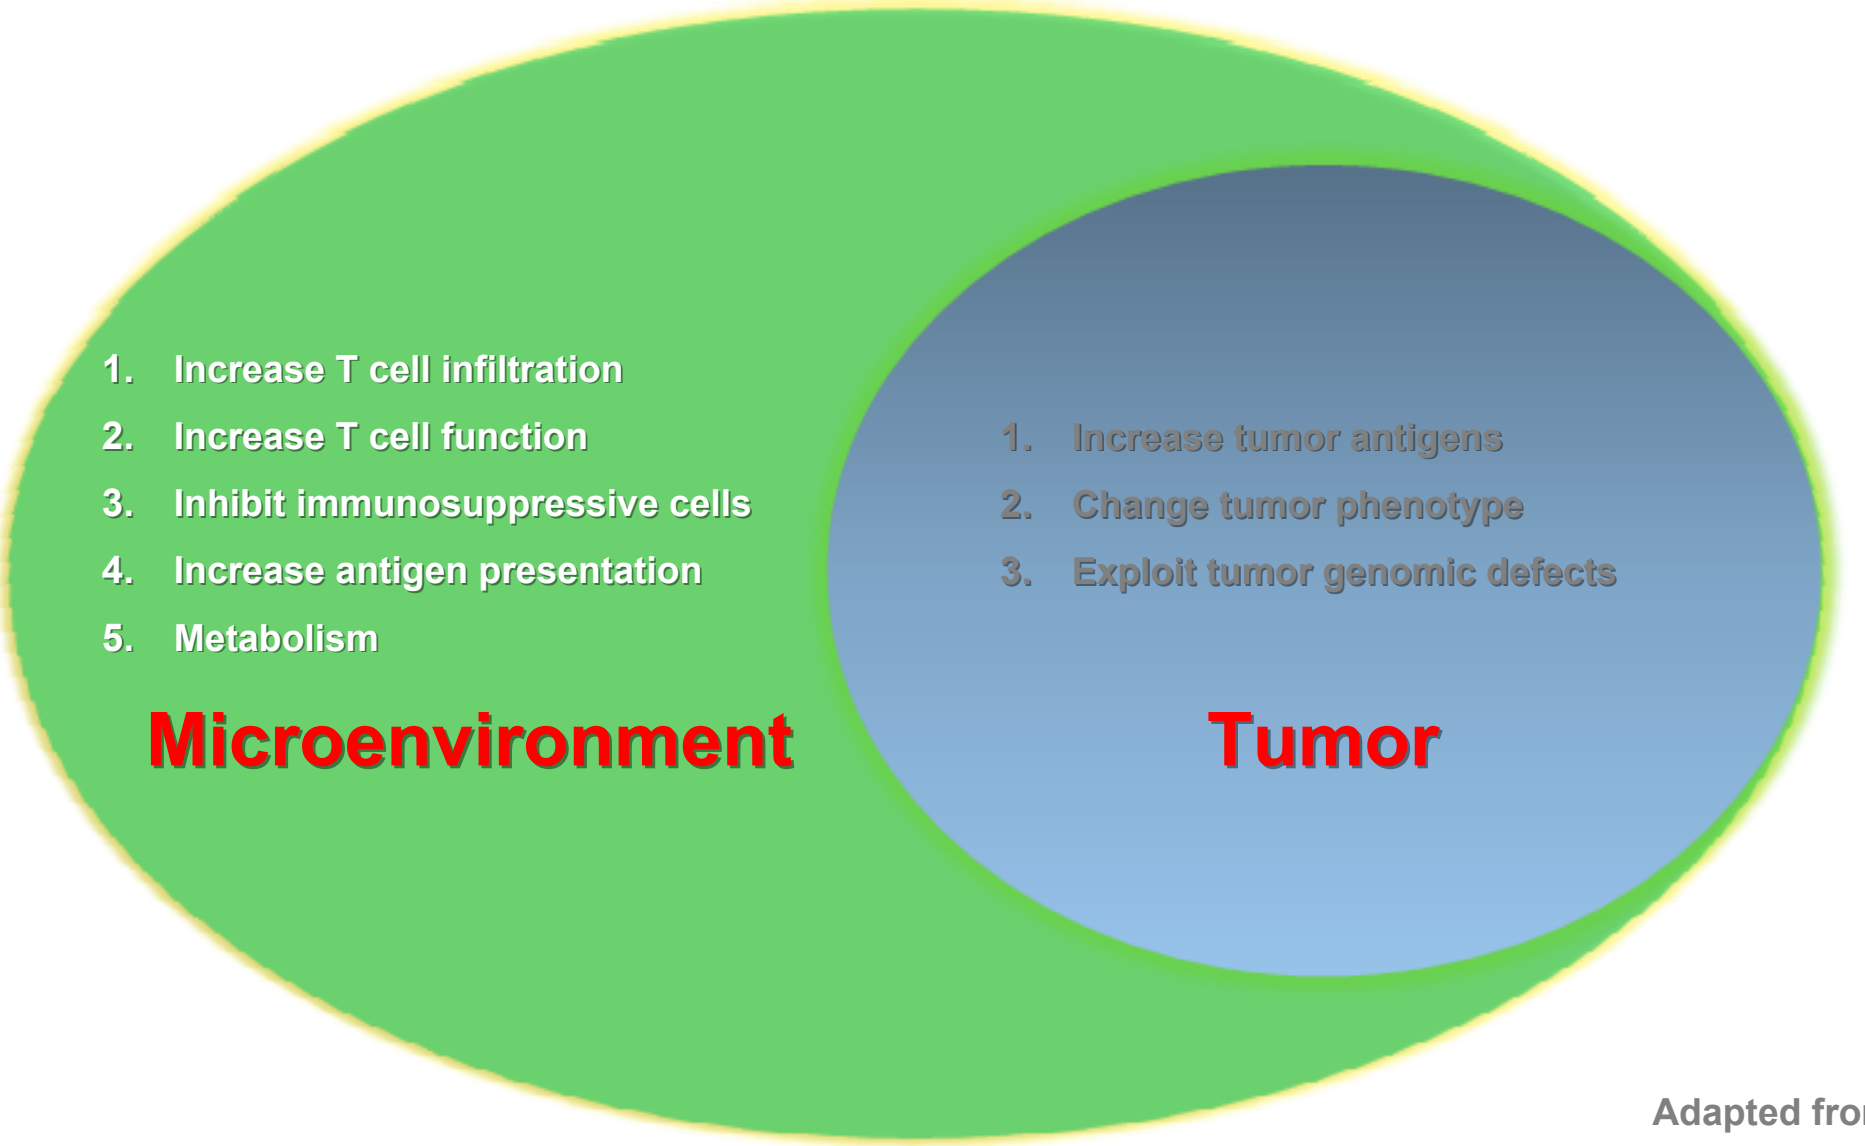
Making Immune Checkpoint Therapies More Effective



Targeting Strategies

- Immune checkpoints
- Chemotherapy
- XRT
- Hormone therapy
- PARP inhibitors
- Vaccines
- Cytokines
- Epigenetic modulators
- Metabolites

Thompson in collaboration with the National Comprehensive Cancer Network

Conclusions for Immune Checkpoint Therapies

- Each target has a different mechanism of action
- Induce durable responses in a subset of patients
- Responses are associated with TMB in some malignancies
- Can be used to turn “cold” tumors “hot”
- Toxicities can be fatal
- Better biomarkers are required to maximize efficacy and minimize toxicities
