

Immunotherapy for the Treatment of Melanoma

Shailender Bhatia, MD

Associate Professor

University Of Washington/Fred Hutch, Seattle

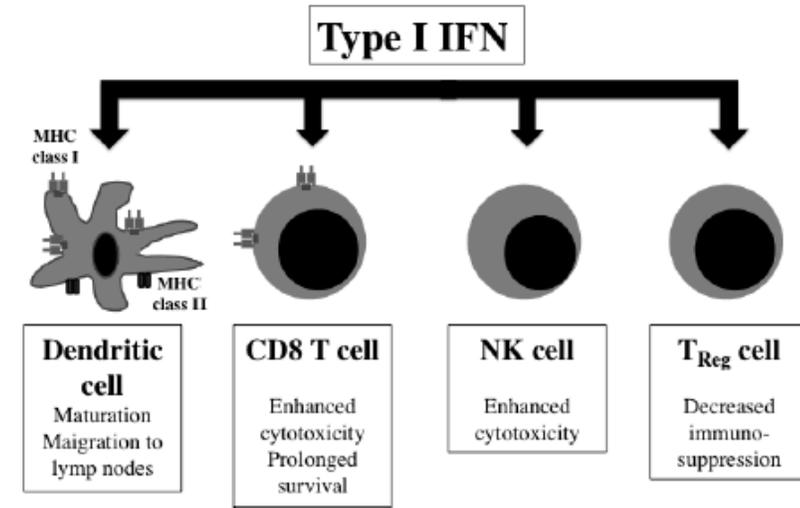

Disclosures

- **Research support (to UW):** *BMS, EMD-Serono, Immune Design, Merck, Novartis, Oncosec.*
- **Advisory Board:** *Genentech, BMS, EMD-Serono*
- I will not be discussing non-FDA approved indications during my presentation.

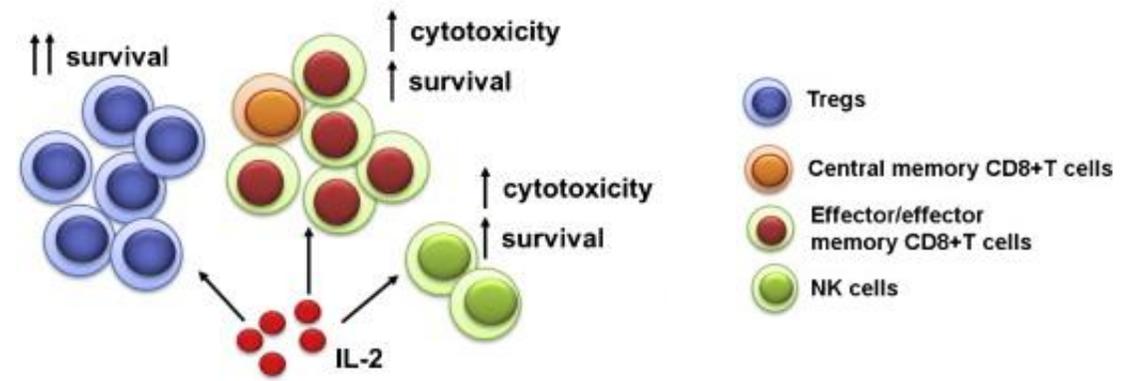

FDA-approved Immunotherapies in Melanoma

- Cytokines

- Interferon- α 2b- Adjuvant therapy- high dose intravenous (I.V.) part, followed by subcutaneous (SQ)
- Pegylated Interferon-Adjuvant therapy, SQ
- Interleukin-2-Stage IV, I.V.

Numasaki et al. Immunotherapy 2016

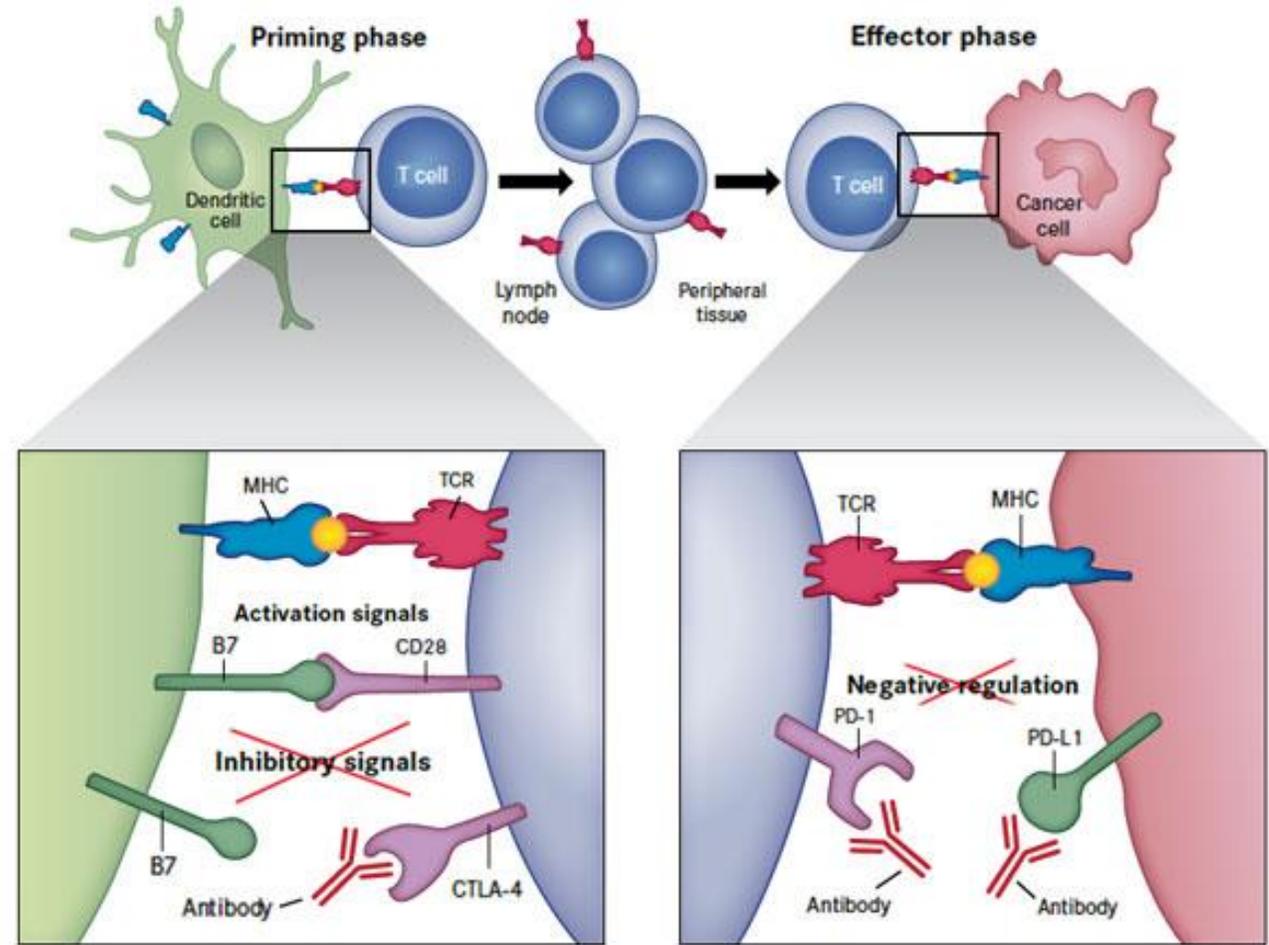

Sim, Radvanyi Cytogfr 2014

FDA-approved Immunotherapies in Melanoma

- Checkpoint inhibitors

- Ipilimumab, adjuvant and nonresectable/Stage IV, I.V.-different dosing for adjuvant and nonresectable/Stage IV
- Pembrolizumab, nonresectable/Stage IV, I.V.
- Nivolumab, adjuvant and non resectable/Stage IV, I.V.
- Ipilimumab in combination with nivolumab, Stage IV

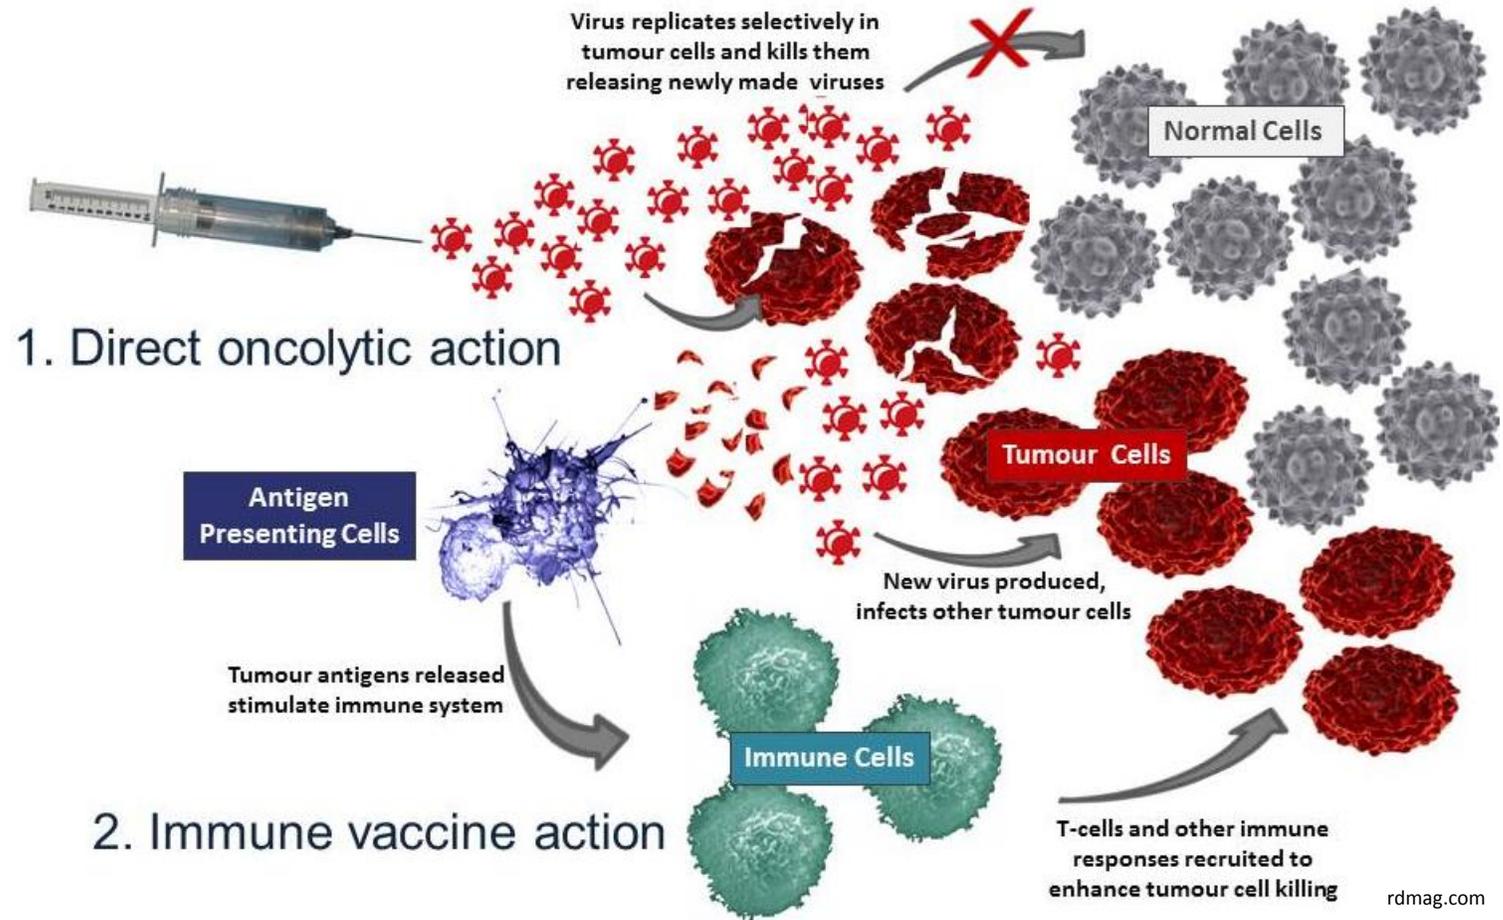

Ribas NEJM 2012
 Gordon et al Nature 2017

FDA-approved Immunotherapies in Melanoma

- Oncolytic Viruses

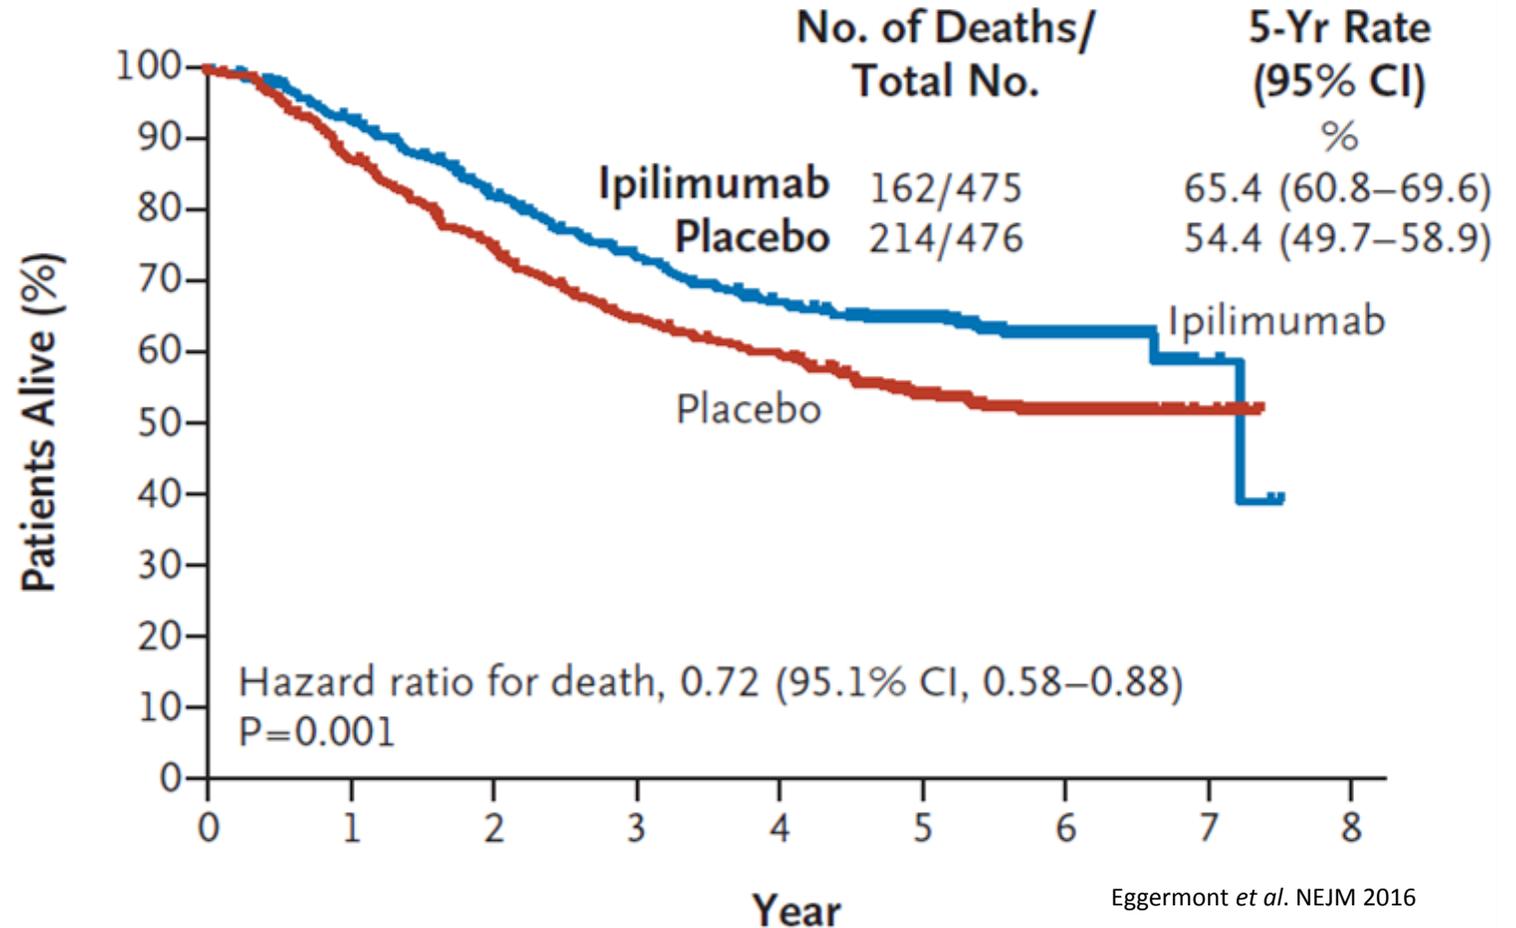

- Talimogene Laharparepvec; TVEC - non resectable, intratumoral

rdmag.com

Adjuvant Ipilimumab in High-Risk Stage III Melanoma

- EORTC 18071 phase III trial
 - NCT00636168
 - Adjuvant ipilimumab vs placebo
 - Ipilimumab 10mg/kg Q3W for four doses, then every 3 months for up to 3 years

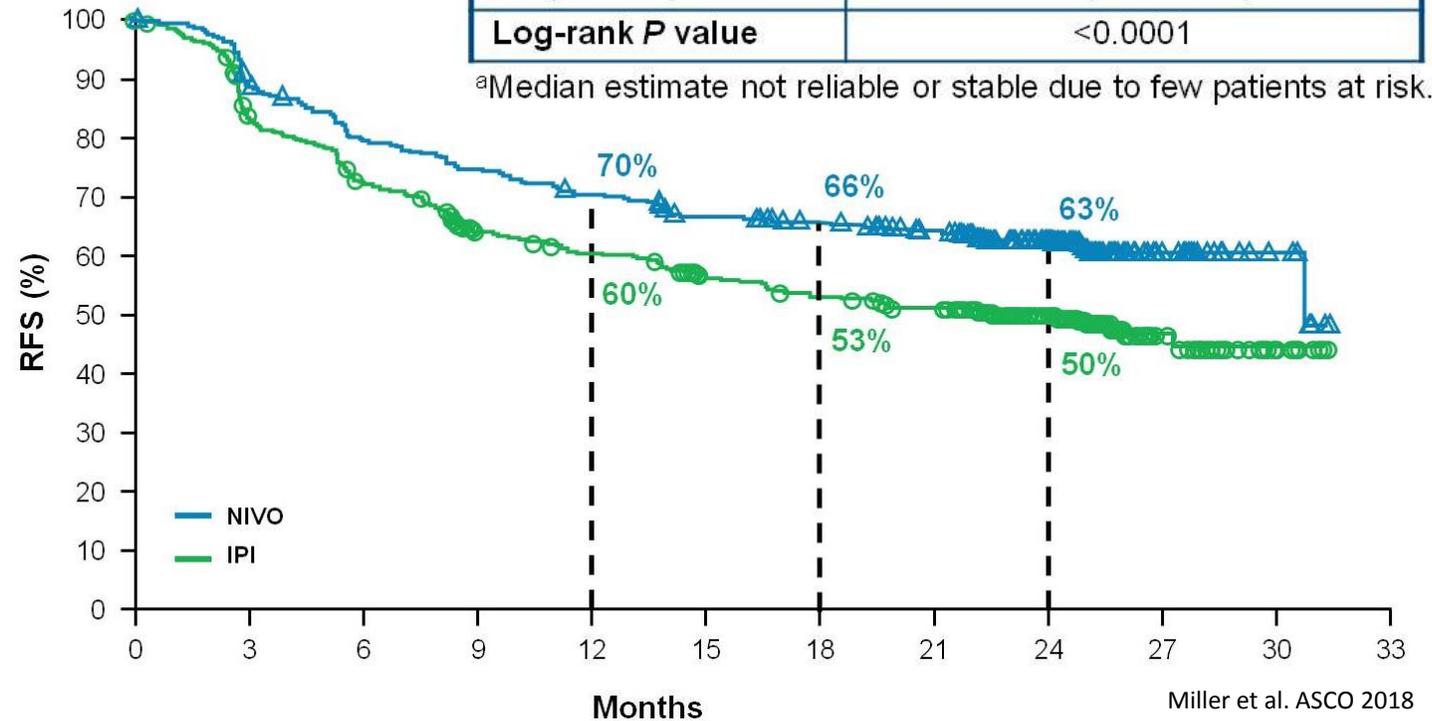

Adjuvant Nivolumab vs Ipilimumab in High-Risk Stage III Melanoma

- CheckMate 238 phase III trial

- NCT02388906
- Ipilimumab 10mg/kg Q3W for four doses, then every 3 months for up to 1 year
- Nivolumab 3mg/kg Q2W for four doses, then every 3 months for up to 1 year

	NIVO	IPI
Events/patients	171/453	221/453
Median (95% CI)	30.8 (30.8, NR) ^a	24.1 (16.6, NR)
HR (95% CI)	0.66 (0.54, 0.81)	
Log-rank P value	<0.0001	

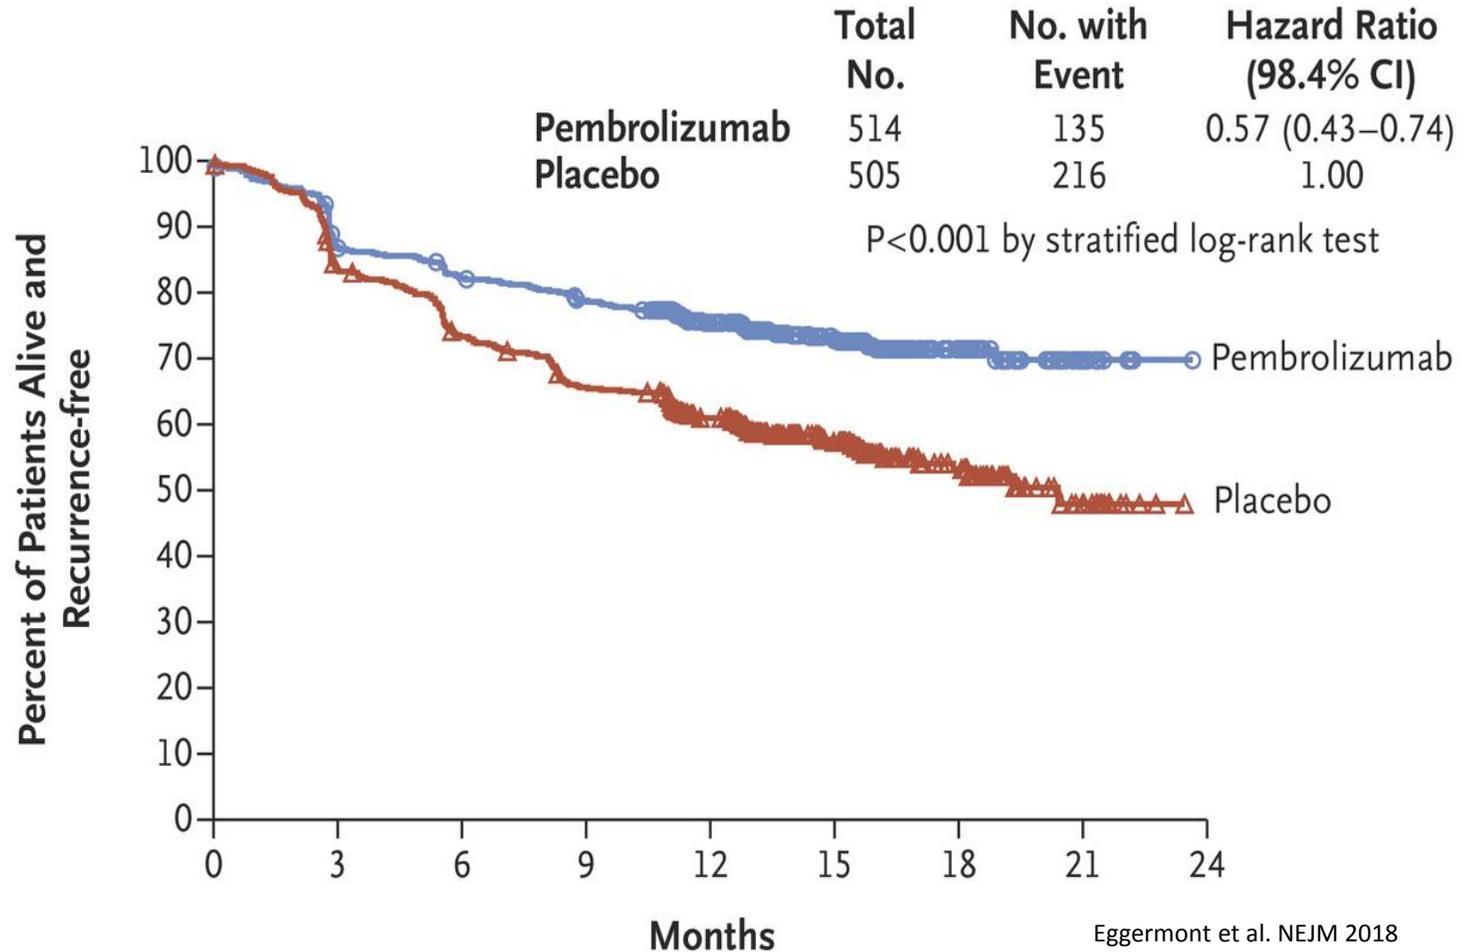

^aMedian estimate not reliable or stable due to few patients at risk.

Miller et al. ASCO 2018

Adjuvant Pembrolizumab in High-Risk Stage III Melanoma

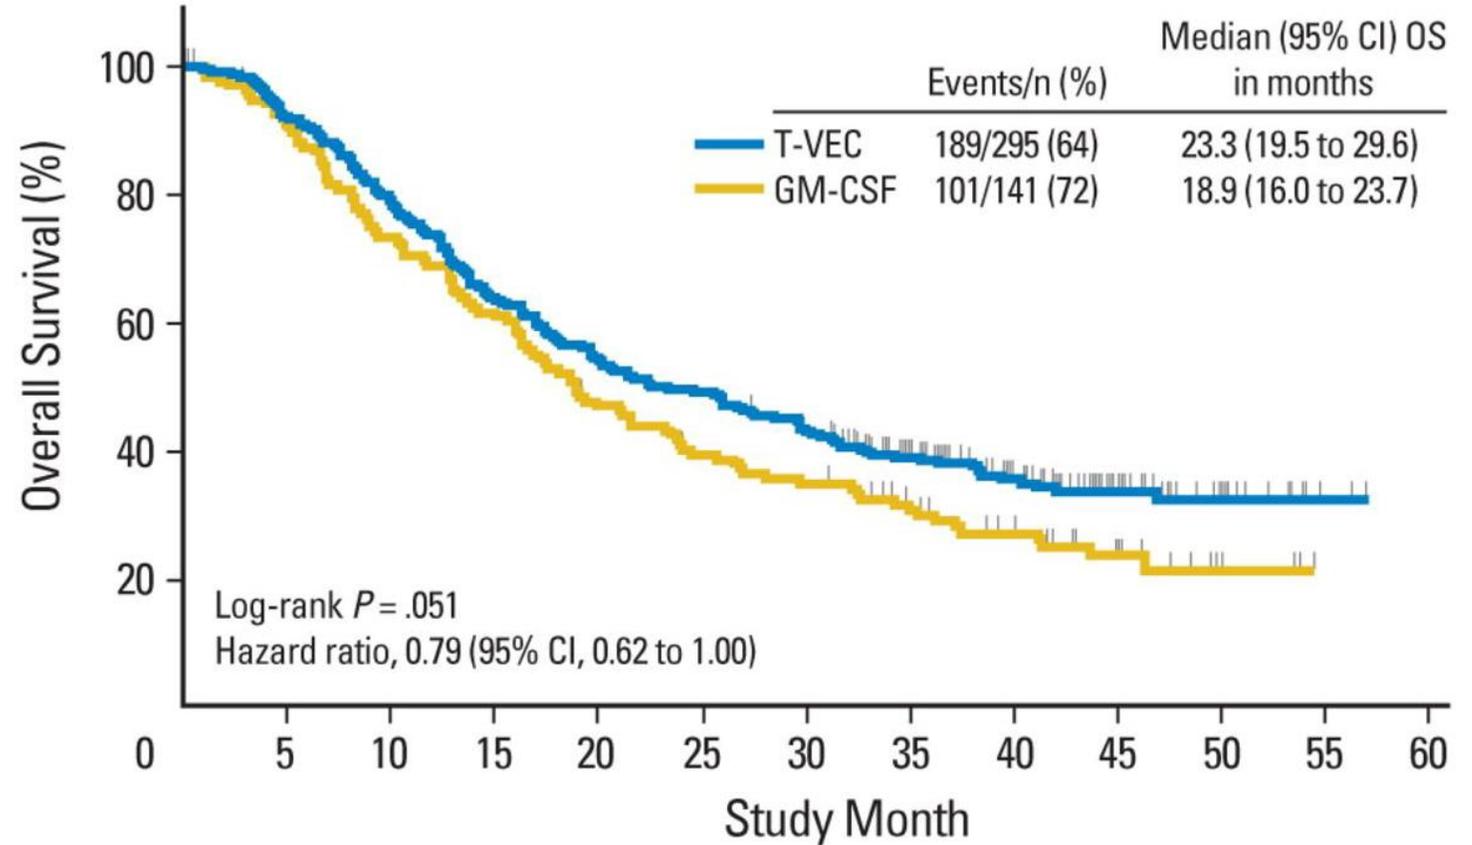

- EORTC 1325/KEYNOTE-054 phase III trial
 - NCT02362594
 - Adjuvant pembrolizumab vs placebo
 - Pembrolizumab 200mg Q3W for up to 1 year (~18 total doses)

Talimogene laherparepvec (T-VEC) in Stage III/IV Melanoma

- **Phase III OPTiM Trial**

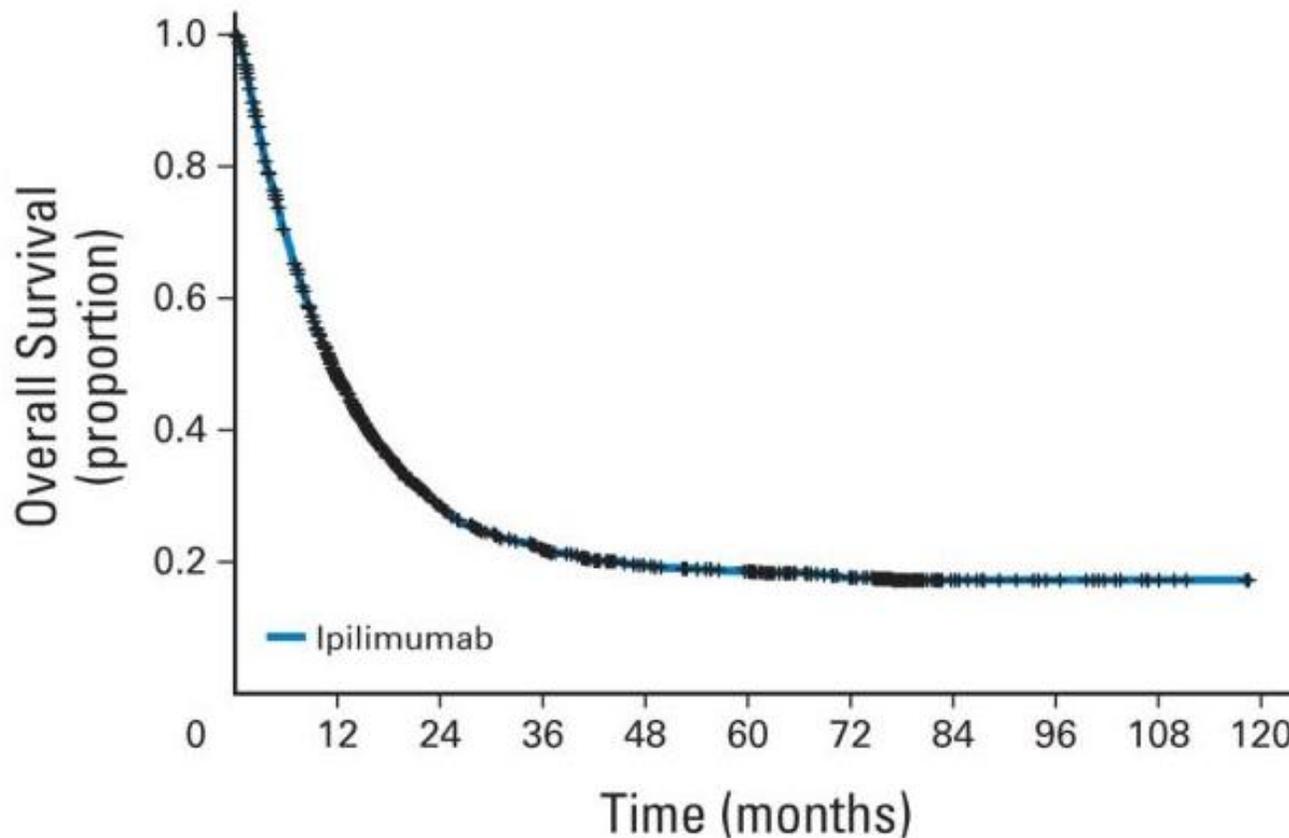

- Oncolytic, genetically-engineered herpes virus
- **Intralesional T-VEC**
 10⁶ pfu/mL, 10⁸ pfu/mL 3 weeks after initial dose, then Q2W
- Subcutaneous GM-CSF

Andtbacka, Kaufman et al. JCO 2015

Ipilimumab in Stage III/IV Melanoma

- Pooled OS data from 10 phase II/III trials
 - Previously treated (n = 1,257) or treatment-naïve (n = 604)
 - Ipilimumab 3 mg/kg (n = 965) or 10 mg/kg (n = 706)

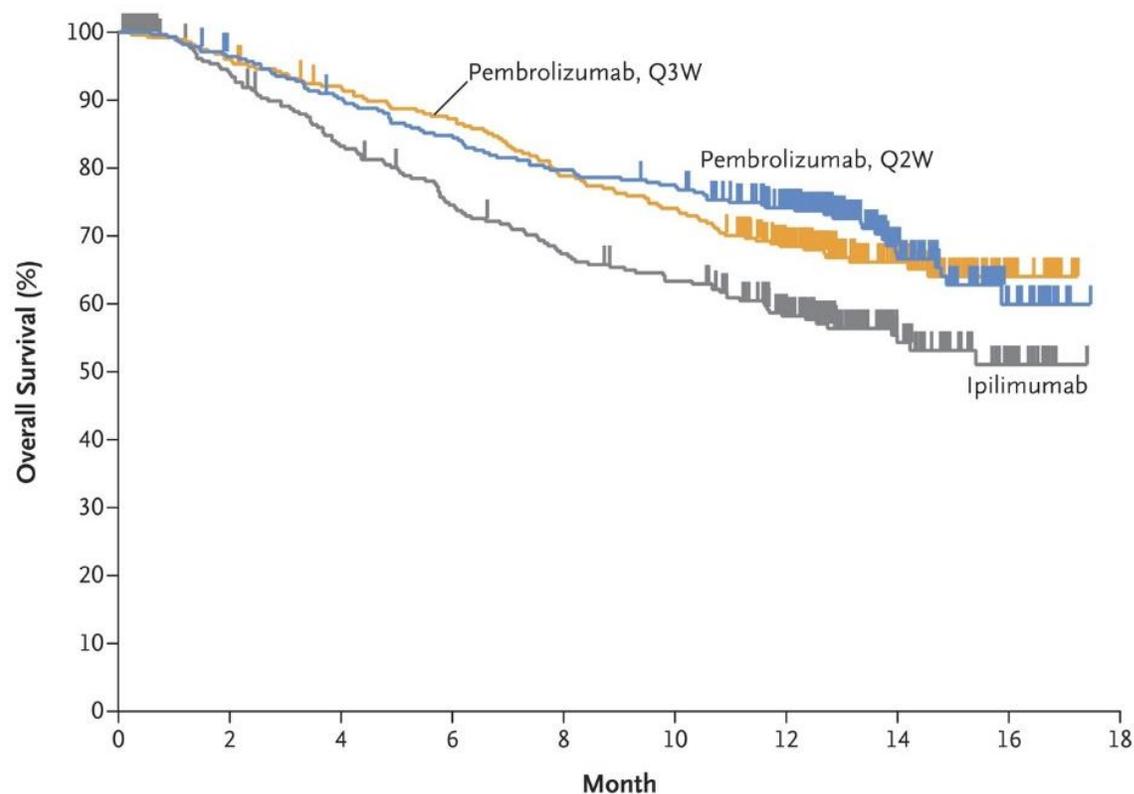

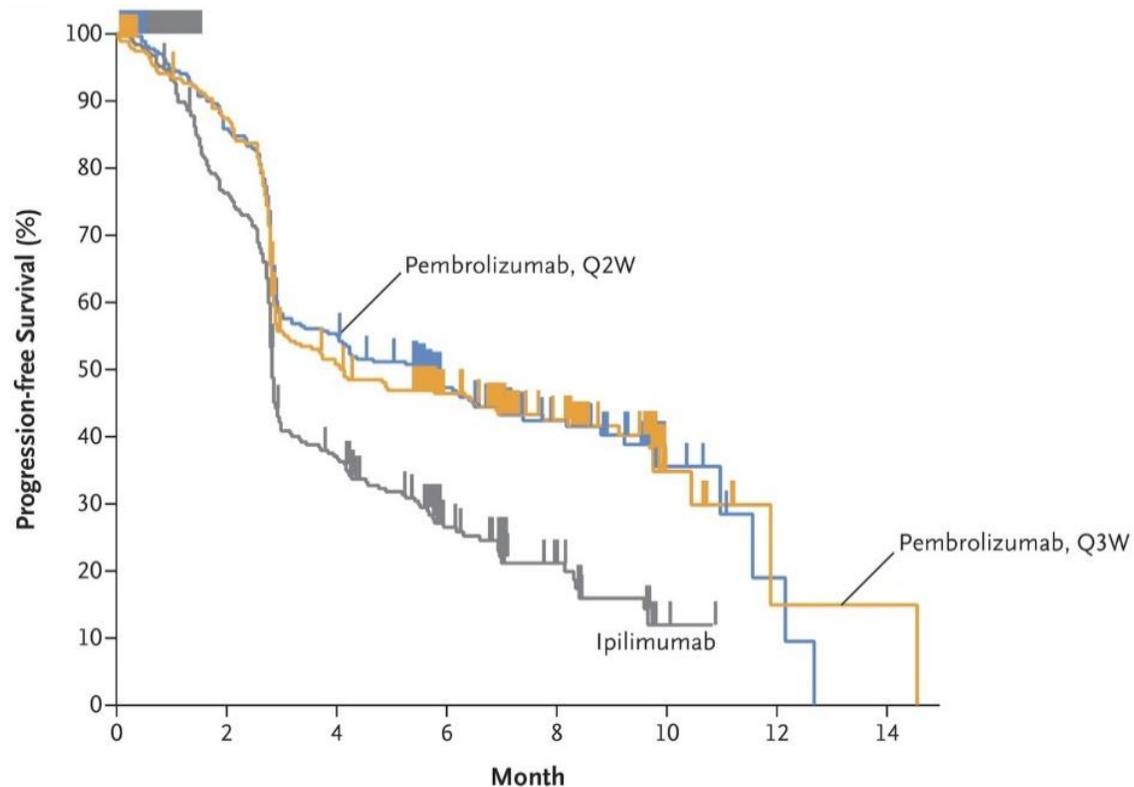

No. at risk	0	12	24	36	48	60	72	84	96	108	120
Ipilimumab	1,861	839	370	254	192	170	120	26	15	5	0

Treatment of Immune-Related AEs

Grade of immune-related AE (CTCAE/equivalent)	Corticosteroid management	Additional notes
1	<ul style="list-style-type: none"> Corticosteroids not usually indicated 	<ul style="list-style-type: none"> Continue immunotherapy
2	<ul style="list-style-type: none"> If indicated, start oral prednisone 0.5-1 mg/kg/day if patient can take oral medication. If IV required, start methylprednisolone 0.5-1 mg/kg/day IV If no improvement in 2–3 days, increase corticosteroid dose to 2 mg/kg/day Once improved to ≤grade 1 AE, start 4–6 week steroid taper 	<ul style="list-style-type: none"> Hold immunotherapy during corticosteroid use Continue immunotherapy once resolved to ≤grade 1 and off corticosteroids Start proton pump inhibitor for GI prophylaxis
3	<ul style="list-style-type: none"> Start prednisone 1-2 mg/kg/day (or equivalent dose of methylprednisolone) If no improvement in 2–3 days, add additional/alternative immune suppressant Once improved to ≤ grade 1, start 4–6-week steroid taper Provide supportive treatment as needed 	<ul style="list-style-type: none"> Hold immunotherapy; if symptoms do not improve in 4–6 weeks, discontinue immunotherapy Consider intravenous corticosteroids Start proton pump inhibitor for GI prophylaxis Add PCP prophylaxis if more than 3 weeks of immunosuppression expected (>30 mg prednisone or equivalent/day)
4	<ul style="list-style-type: none"> Start prednisone 1-2 mg/kg/day (or equivalent dose of methylprednisolone) If no improvement in 2–3 days, add additional/alternative immune suppressant, e.g., infliximab Provide supportive care as needed 	<ul style="list-style-type: none"> Discontinue immunotherapy Continue intravenous corticosteroids Start proton pump inhibitor for GI prophylaxis Add PCP prophylaxis if more than 3 weeks of immunosuppression expected (>30 mg prednisone or equivalent/day)

Developmental Immunotherapeutic Strategies for Melanoma

Targeting New Immune Checkpoints

Ascierto, McArthur J Transl Med 2017

Pilot Study: Radiotherapy (RT) + Intratumoral Immunocytokine (IT-IC) + Ipilimumab + Nivolumab for Advanced Melanoma

A UWCCC Clinical Trial (IND being prepared) with collaboration from Apeiron, NMS and NCI

- **Goals:**

- First in human Phase-1 testing of IT-IC with an IC that can bind to tumor and mediate ADCC
- First in human IT-IC of such an IC immunologically timed after local RT
- First in human testing of this in combination with anti-CTLA4 and/or anti-PD1
- Toxicity/Tolerance/Anti-tumor effects
- Serial biopsies of the same lesions, to look for the changes seen in murine tumors

Protocol Chairs: Mark Albertini, M.D.

Radiation Oncology Co-Chair: Zachary Morris, M.D., Ph.D

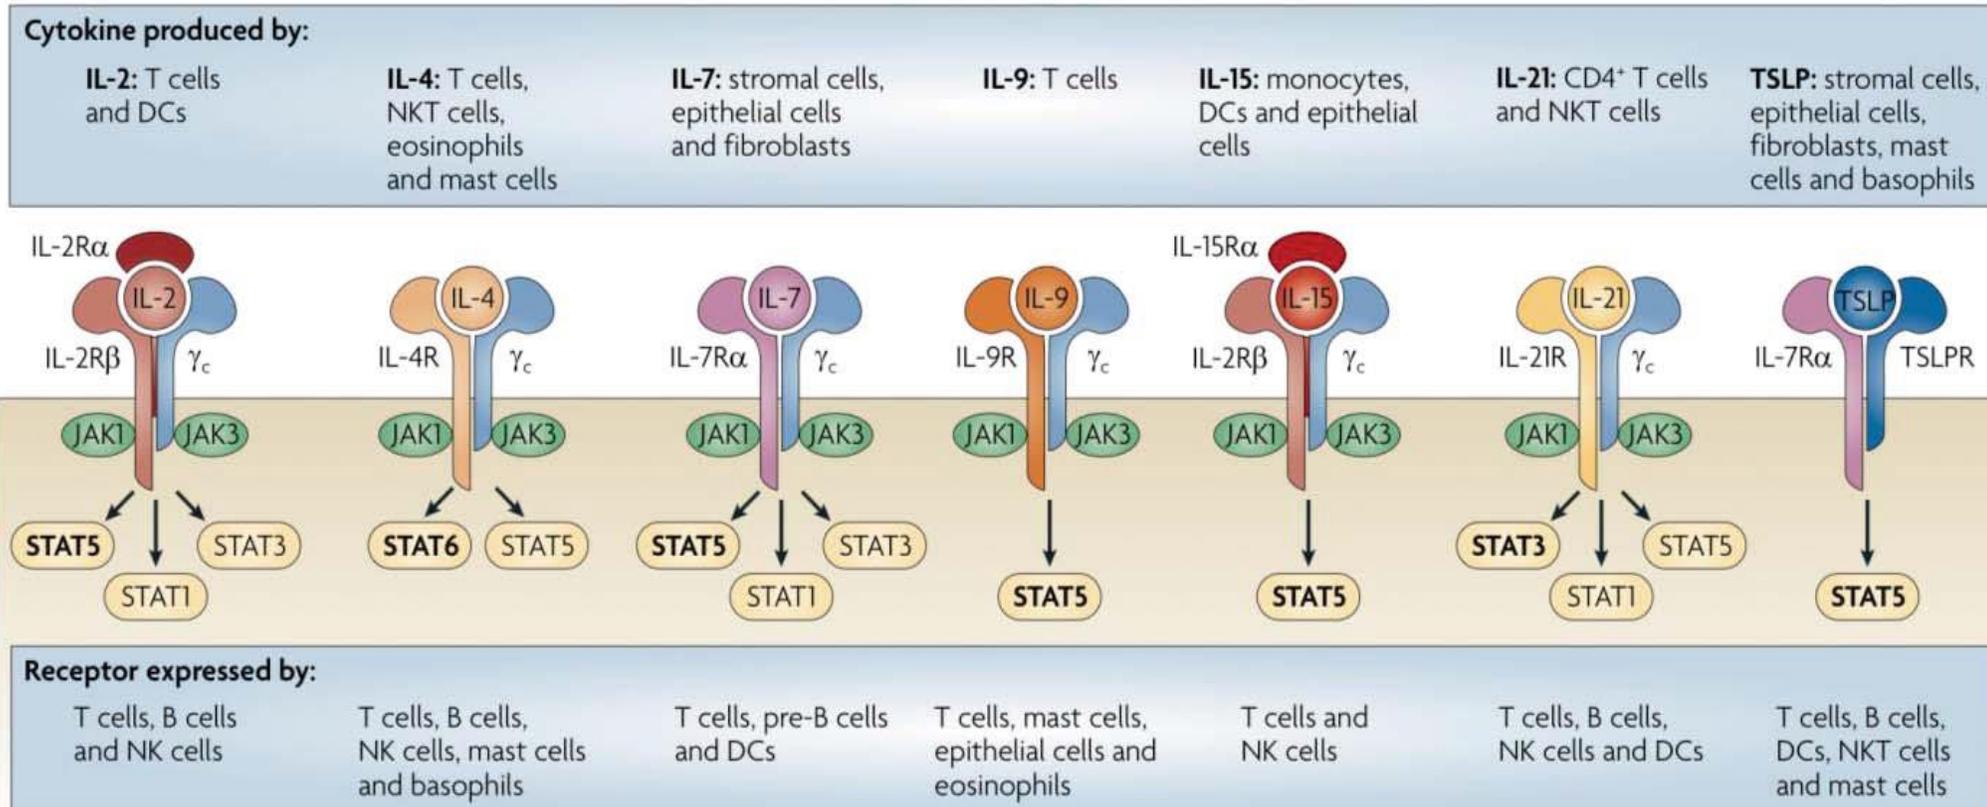

Laboratory Co-Chair: Jacqueline A. Hand, Ph.D

Pathology Co-Chair: Erik Ranheim, M.D., Ph.D.

NCI Grant (R35 CA197078-01) PI: Paul M. Sondel, M.D., Ph.D.

Case study 1

- A 75-year old man presents with **progressive anorexia, weight loss, night sweats, fatigue and right-sided abdominal pain** for the last few weeks.
- Imaging studies show **widely disseminated metastases** in multiple organs, including **greater than 50% liver involvement**. Brain MRI showed **5 brain metastases (largest was 1.5 cm in R-frontal lobe)**; he denied neurologic symptoms and neuro exam was WNL.
- Biopsy of a liver tumor reveals **metastatic melanoma with BRAF V600E mutation present**.
- Laboratory analyses reveal Hemoglobin 10, **AST 75, ALT 85, ALK-P 375 and Bilirubin 1.5**. His ECOG performance score is 2.

Baseline

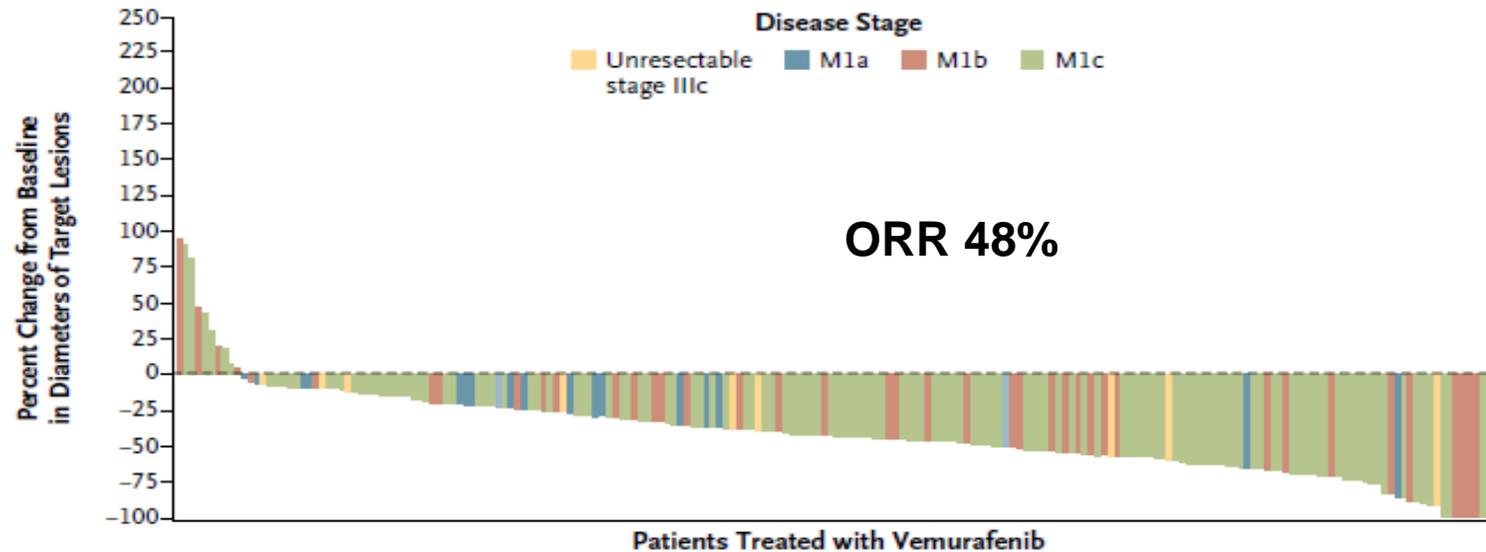

Case study 1

What will you recommend next?

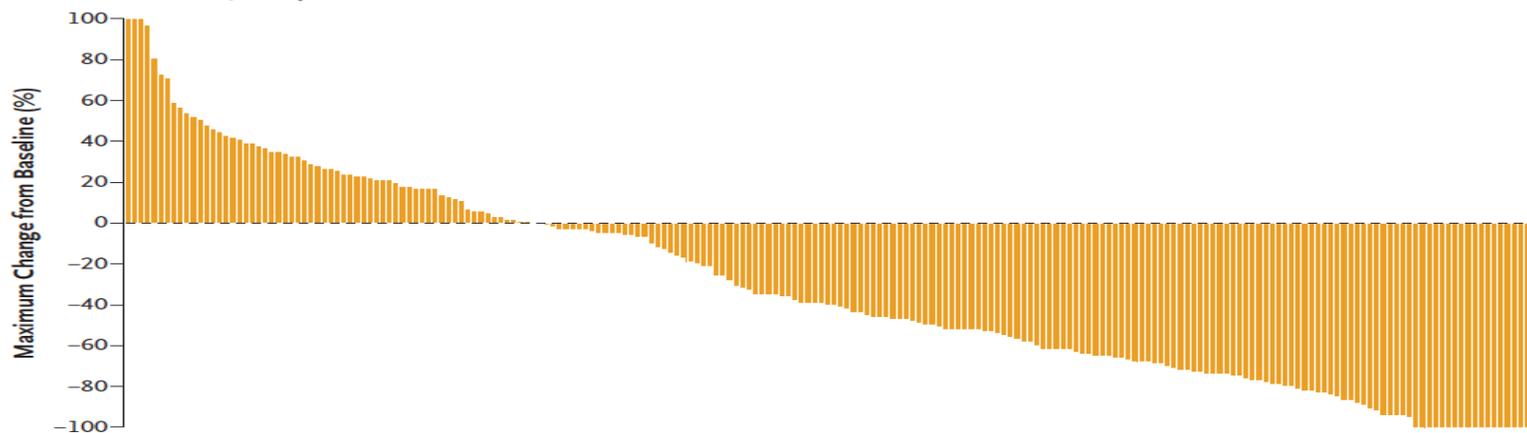

- A. Whole brain radiation therapy.
- B. PD-1 blockade (Pembrolizumab or Nivolumab)
- C. Ipilimumab plus Nivolumab
- D. BRAFi + MEKi**
- E. Hospice

Case study 1 (explanation)

A Vemurafenib Group

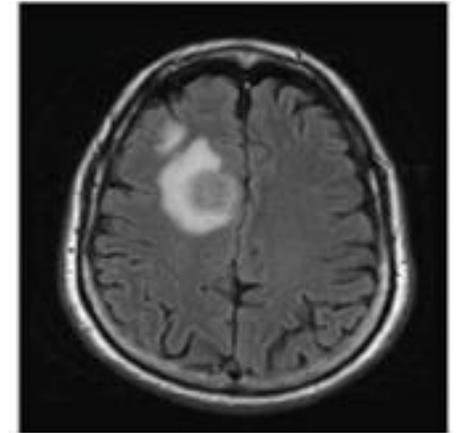

B Pembrolizumab, Every 3 Wk

Case study 2

- A 75-year old man presents with **right axillary lymphadenopathy (LN 3 x3 cm)** and a biopsy shows metastatic melanoma.
- Imaging studies show scattered **pulmonary nodules (largest 1.5 cm)** . Brain MRI showed **5 brain metastases (largest was 1.5 cm in R-frontal lobe)**; he denied neurologic symptoms and neuro exam was WNL.
- **BRAF V600E mutation is present.**
- Laboratory analyses reveal unremarkable labs. His ECOG **performance score is 0.**

Case study 2

What will you recommend next?

- A. Whole brain radiation therapy.
- B. PD-1 blockade (Pembrolizumab or Nivolumab)
- C. Ipilimumab plus Nivolumab
- D. BRAFi + MEKi
- E. Hospice

Case study 2 (explanation)
