# Cancer Moonshot – Blue Ribbon Panel

The “***Cancer Moonshot***” began in 2016 with the overarching goal to dramatically accelerate efforts to prevent, diagnose, and treat cancer.

## Blue Ribbon Panel

- **28 members** representing clinicians, researchers, advocates, and representatives from pharm and IT
- **7 Working Groups** spanning enhanced data sharing, cancer immunology, tumor evolution, implementation science, pediatric cancer, precision prevention, and early detection.
- Each WG **identified major scientific opportunities that were poised for acceleration.**
- The BRP selected **10 “Moonshot” recommendations.**

# Blue Ribbon Panel Recommendations

Establish a network for **direct patient involvement**

Create a translational science network devoted to **immunotherapy**

Develop ways to overcome **resistance to therapy**

Build a national cancer **data ecosystem**

Intensify research on the major drivers of **childhood cancer**

Minimize cancer treatment's debilitating **side effects**

Expand use of proven **prevention and early detection** strategies

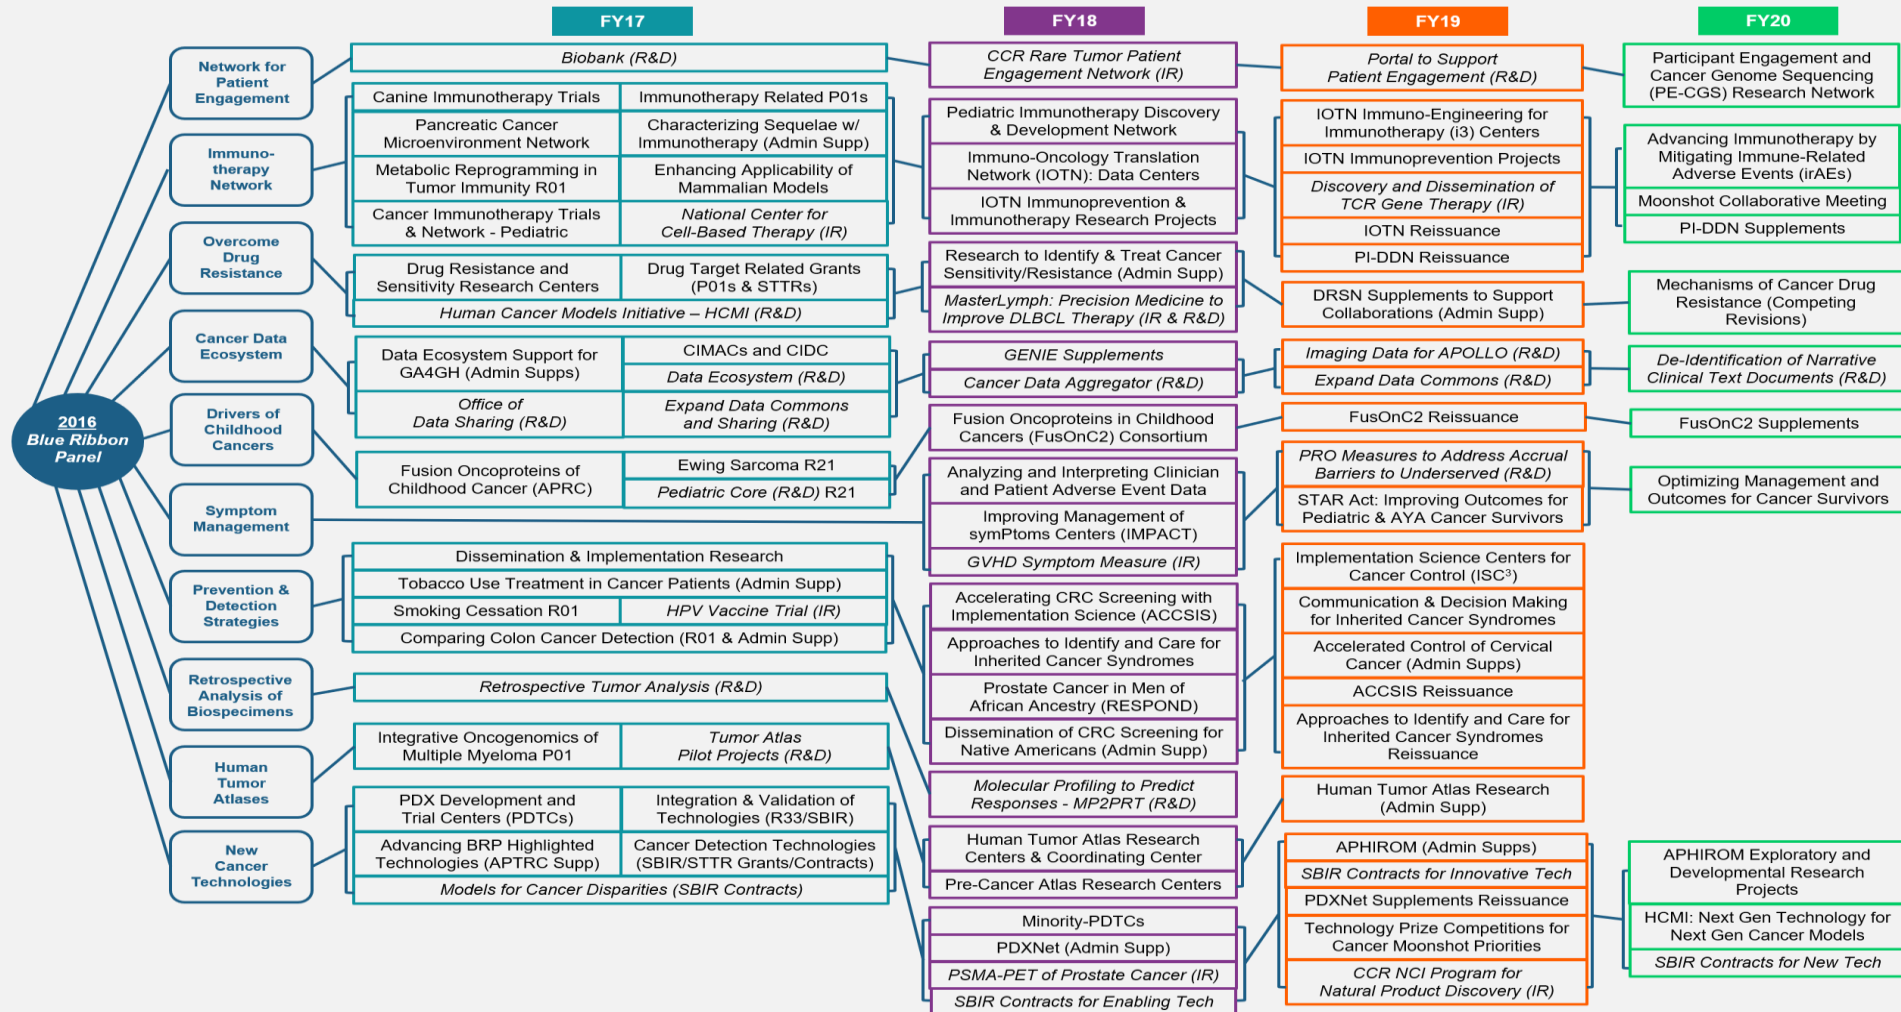

Develop a 3D **cancer atlas**

Mine past patient data to predict future **patient outcomes**

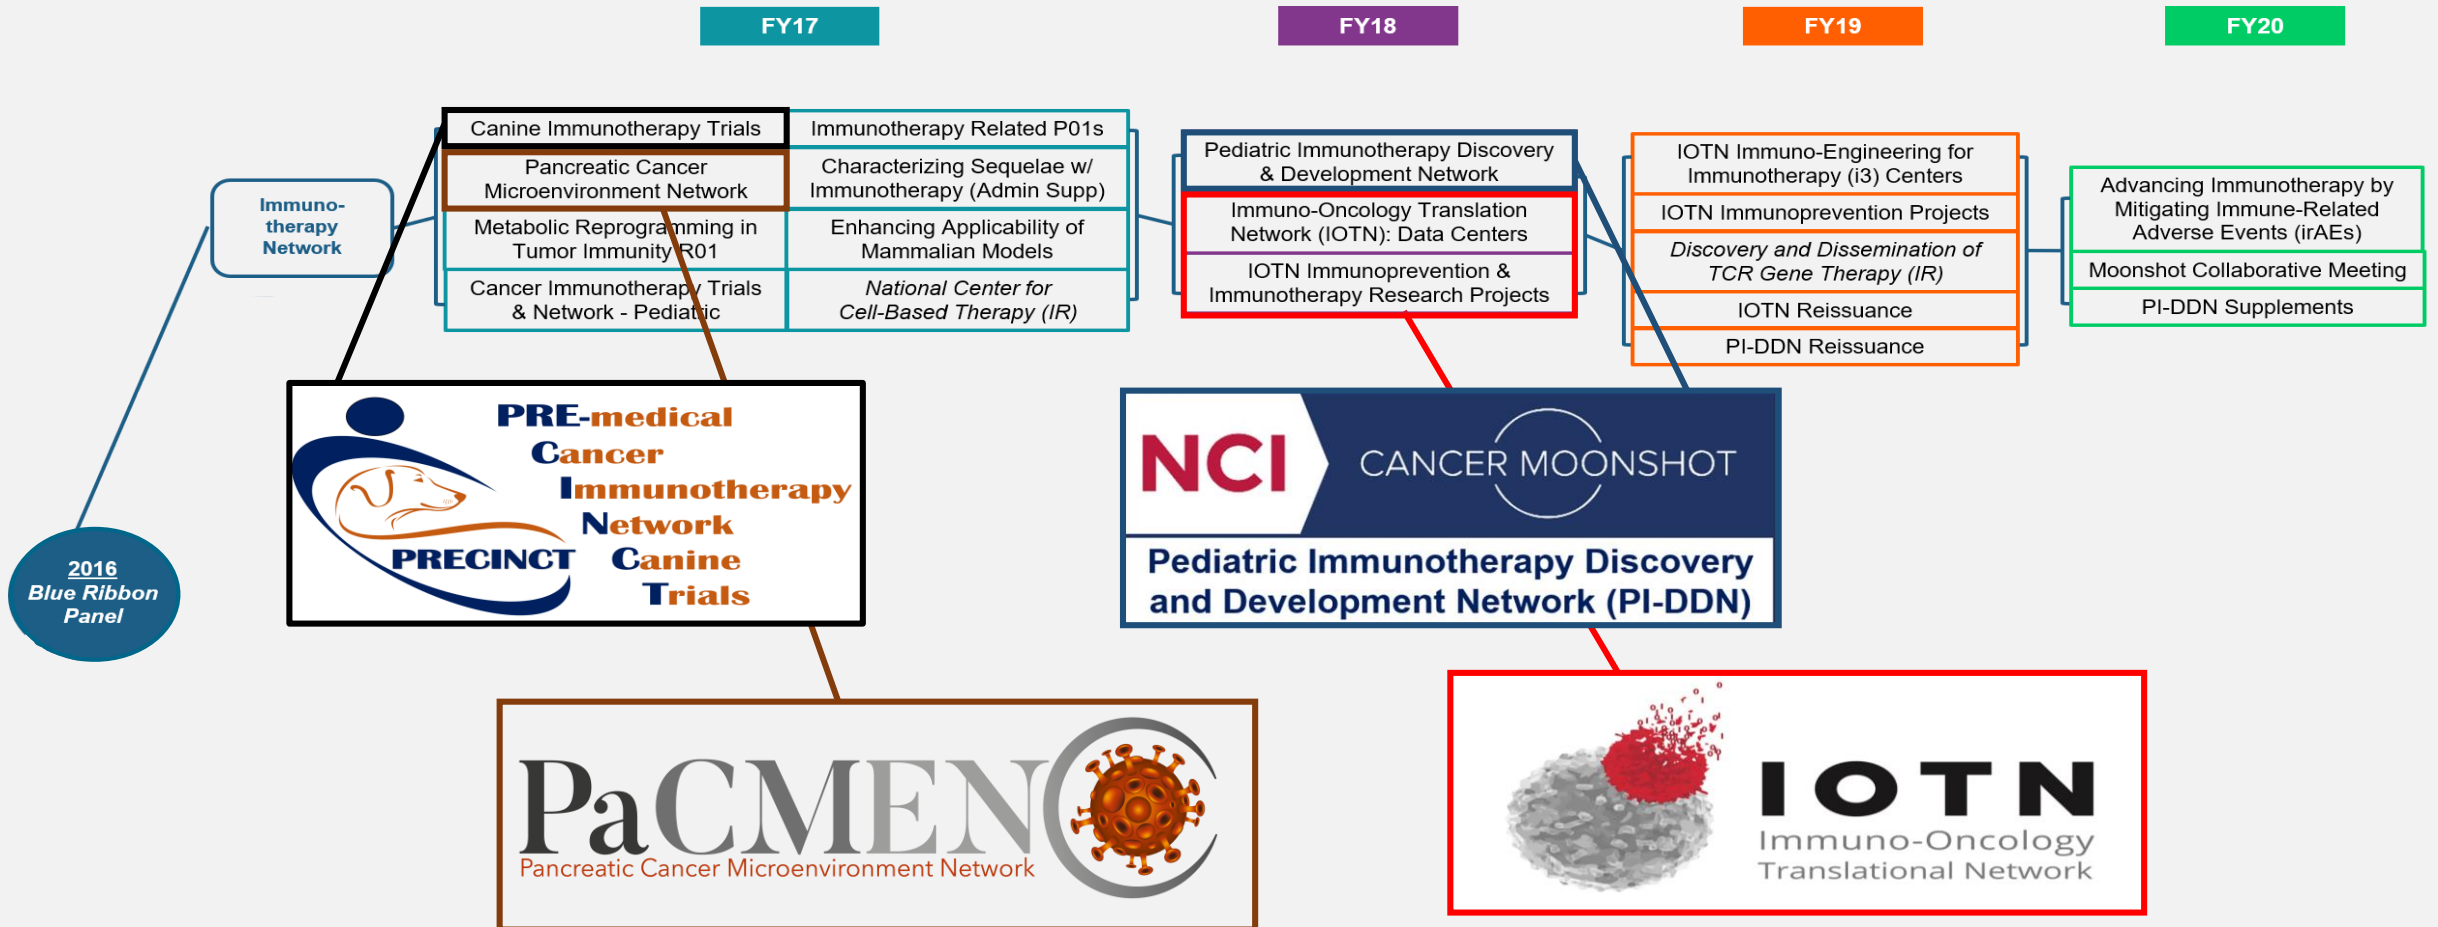

Develop new cancer **technologies**

# IOTN | Immuno-Oncology Translational Network

**Goal:** Leverage expertise and resources of a collaborative network to improve immunotherapy outcomes for both “hot” and “cold” cancers and to prevent cancers before they occur.

## Objectives:

- Define tumor immune microenvironments across organ sites.
- Identify novel immune checkpoints, tumor-specific T cell receptors and their cognate tumor targets (neoantigens).
- Uncover intrinsic and extrinsic resistance pathways.
- Identify actionable targets in pre-cancerous lesions; develop and validate early intervention vaccines for immunoprevention.
- Design and test improved immunotherapies and their combinations with other regimens for durable anti-cancer responses.
- Incorporate immunoengineering principles to improve upon promising approaches and **make immunotherapy more effective, safer, and accessible to more patients.**

## - Resource Centers -

U24CA232979

*IOTN: Data Management and  
Resource-Sharing Center (DMRC)*

Roswell Park Comprehensive Cancer Center

**Hutson, Alan**

Morgan, Martin

Liu, Song

Odunsi, Kunle

### Network Support:

- Data Integration and Sharing
- Analytical/Technical support
- Bioconductor

### IOTN Management:

- Monthly SC Meetings
- FTF Meeting SC Meetings
- IOTNMoonshot.Org

U24CA233032

*IOTN: Cellular Immunotherapy Data  
Resource (CIDR)*

Medical College of Wisconsin

**Pasquini, Marcelo**

### Cellular Therapy Data Registry:

- Collect data on patients in clinical trials involving cellular therapy
- Demographics, tumor characteristics, treatment, manufacturing details, adverse events and outcomes; and
- Facilitate retrospective observational research to improve cell-based therapy.

# Cancer Immunotherapy Research Projects

**Goal:** Develop improved tumor-specific immunotherapy approaches/combinations.

**Objectives:**

- Define immune interactions in TMEs.
- Identify novel immune checkpoints, tumor-specific T cell receptors and their cognate tumor targets (neoantigens).
- Uncover intrinsic and extrinsic resistance pathways.
- Test improved immunotherapies and their combinations with other regimens for durable anti-cancer responses.
- **Studies should be largely pre-clinical involving clinically-relevant models and endpoints for rapid translation.**

# Cancer Immunoprevention Research Projects

**Goal:** Develop early intervention vaccines based on actionable targets in pre-cancerous lesions.

## **Objectives:**

Focus on cancers that occur in specific organ sites in high-risk cohorts.

- Lynch Syndrome (colon and endometrial cancer)
- Familial Adenomatous Polyposis (colon cancer)
- BRCA1/2 Carriers (breast and ovarian cancer)
- NF and TSC (neurologic and other cancers)
- Populations exposed to environmental carcinogens
- Other definable high-risk cohorts
- **Studies should be largely pre-clinical involving clinically-relevant models and endpoints for rapid translation.**

## - Immuno-Engineering *i3* Centers (U54) -

### Goal:

- Incorporate bioengineering and systems biology approaches in the IOTN framework.
  - **Toolkit**: biomaterials, nanotechnologies, synthetic chemistry/biology & modeling.
- Quantitatively understand the physical basis of immune system function;
- Build predictive models;
- Regenerate compromised immune systems for therapeutic benefit; and
- Enable precise control of desired immune responses that are **more effective, safer, and more broadly available.**
